

Global Perspectives

Year 9

Student Manual

Global Perspectives

Year 9 · Student Book

Look closer. Think wider.

Seven units, one full year — a student's book for Stage 9.

INSIDE THIS BOOK

- Seven units, one for each skill, and a final research report — from microbes to mock trials
- Every unit ends with a Level up page showing what a top answer looks like
- A Skills toolkit that explains command words and every skill, step by step
- Real research, real sources: checklists, case files and evidence files throughout

IMPRINT

EDITION	First edition, 2026. Global Perspectives 9 · Student Book. Full colour, 216 × 303 mm, 174 pages. Cambridge Lower Secondary pathway; an independent publication, not certified or endorsed by Cambridge University Press & Assessment. ISBN to be assigned; printed on demand.
PUBLISHER	Prime School Press is the publishing imprint of Prime School, Portugal.
RIGHTS	© Prime School 2026. All rights reserved. No part of this publication may be reproduced, stored in a retrieval system or transmitted in any form or by any means without the prior written permission of the publisher.
DATA & LINKS	Data sources are listed at the end of each unit; charts and maps were drawn by Prime Books from the data cited. Websites and QR codes were checked on 3 October 2026 — websites change, so if a link stops working, search for the organisation and page title printed beside the code.
CREDITS	Editorial Board. Illustrations created for Prime Books with AI image-generation tools under human art direction. Type: Archivo, Atkinson Hyperlegible Next and Caveat (SIL Open Font License). The health information in this book is for learning; it is not medical advice.

Independent publication. This is an independent publication produced by Prime School for use within its own programmes of study. It is not affiliated with, licensed by, endorsed by or approved by any examination board, or by any other publisher.

Ages 13–14 · Lower Secondary

How this book works

Every unit asks one big question. You investigate it like a researcher, moving from your own life out to your community and the world. Each unit ends with a Level up page, and the Skills toolkit (page {p:tk0}) shows you how to do every skill well.

The perspective lens

Look for this symbol at the bottom of each page. The filled rings show which perspective the page explores.

- Personal** (inner ring): you, your family, your choices.
- Local** (middle ring): your school, town or country.
- Global** (outer ring): the world, and how places connect.

Six skills

Each task shows the skills it builds.

- Research** Ask good questions. Find, record and use information.
- Analysis** Spot patterns, causes and consequences in information.
- Evaluation** Judge how trustworthy a source or an argument is.
- Reflection** Think about what you learned and how you worked.
- Collaboration** Work with others to reach a shared goal.
- Communication** Share ideas clearly with a real audience.

What you will find on the pages

Task 3

A task title

Research

A blue box is a task you do on your own or with a partner. Write in the spaces, or in your notebook if your teacher asks you to.

Task 4

A team task

Collaboration

A pink box is for your research team. These tasks build towards the team mission at the end of the unit.

Support gives you a way in. **Stretch** pushes your thinking further.

Talk it through

1. Questions for a pair, group or class discussion. There is rarely one right answer.

Mateo

This is our research team. We think out loud, make mistakes and fix them, so you can see how research really works.

Key word
Important terms are explained in the margin. They are also in the glossary on page 166.

Scan it

Each QR code links to a free, public website with a job to do.

Meet your research team

Amara, Mateo, Yuna and Omar are classmates at an international school. They are not experts. Like you, they are learning to research together, and they do not always agree.

Amara

Grew up in Lagos, Nigeria. Loves big ideas and getting started fast.

Working on: Can rush ahead before the team agrees.

Mateo

Family from Medellín, Colombia. Good with data, spreadsheets and search tools.

Working on: Keeps researching when it's time to decide.

Yuna

Moved from Busan, South Korea. Organised and a careful writer.

Working on: Rarely speaks first in group discussions.

Omar

Family from Cairo, Egypt. Asks 'How do we know that?' about everything.

Working on: Sometimes waits to be asked before helping.

Each of them has strengths and something to work on. Watch how they use their strengths, and how they deal with problems. By the end of the unit you will write about your own strengths and targets too.

Your year

This book is designed for a full school year. Each unit builds one skill in depth while practising the others. The weeks are a guide; your teacher will set the real timetable.

1	Can disease be prevented? Skills focus: Research	weeks 1–6	8
2	Understanding each other Skills focus: Evaluation	weeks 7–11	36
3	Sport for all? Skills focus: Analysis	weeks 12–16	56
4	Feeling safe Skills focus: Collaboration	weeks 17–21	76
5	Is tourism good for everyone? Skills focus: Communication	weeks 22–26	96
6	Fair shares? Skills focus: Reflection	weeks 27–31	116
7	Your research report Skills focus: All six skills	weeks 32–38	136

Every unit ends with

a **Look back** reflection, a **Check your progress** page and a **Level up** page that shows you what a top answer looks like, then lets you practise it.

Whenever you need it

The **Skills toolkit** on page 158 explains the command words and shows you, step by step, how to do each skill well.

My skills tracker

At the end of each unit, score yourself in each skill from 1 (just starting) to 4 (confident and independent). Watch your skills grow across the year.

Skill	U1	U2	U3	U4	U5	U6	U7

My goals for this year

1

2

3

Halfway: how am I doing?

Inside the lens: viruses, bacteria and other microbes, drawn millions of times larger than life and not to scale.

The pump on Broad Street

London, August 1854. In Soho, a crowded part of the city, people start to fall ill with cholera. It strikes fast. Within ten days, more than 500 people in the area have died.

Most doctors at the time believe cholera spreads through 'bad air' from rubbish and sewage. A local doctor, John Snow, has a different idea. He thinks something in the **water** is to blame.

Snow does not just guess. He collects evidence. He gets the official list of who has died and where they lived. He knocks on doors and asks families a simple question: where did you get your water?

The answers keep pointing to one place: a public water pump on Broad Street.

On 7 September, Snow presents his evidence to the local council. They are not fully convinced, but they agree to remove the pump's handle so nobody can use it. The outbreak, already slowing, comes to an end. In total, 616 people die.

Later, a local priest called Henry Whitehead sets out to prove Snow wrong. Instead, his own careful research finds the likely first case: a baby at 40 Broad Street. Water used to wash the baby's nappies had been emptied into a cesspit just a few steps from the well. Whitehead changes his mind, and the two men work together.

Snow and Whitehead helped to change how the world thinks about disease. Snow is often called a founder of **epidemiology**.

The pump without its handle. A copy of the pump stands in the street today.

cholera

A disease caused by bacteria that spreads through dirty water and food. It causes severe diarrhoea and can kill quickly if untreated.

epidemiology

The study of how diseases spread through groups of people, and how to control them.

Think and note

Snow changed people's minds with evidence. What evidence would change your mind about something you believe?

Simplified map of part of Soho, redrawn from John Snow's 1855 map. Not to scale. Each black bar stands for one death; the pattern is illustrative. Circles show other street pumps.

A The workhouse on Poland Street housed more than 500 people. It had its own well. Very few of them died.

B The brewery on Broad Street had about 70 workers. None died. They drank the beer they made, and the brewery had its own well.

C Further away: some people who died lived closer to other pumps. Their families said they walked to Broad Street because they preferred its water.

Task 1 Think like Snow

Analysis Research

On your own, then compare with a partner

1. Describe the pattern of deaths on the map.
2. How does each clue (A, B and C) support Snow's idea that the water was to blame?
3. Snow and Whitehead started on opposite sides. What helped them to work together?

Stretch Removing the handle was an act of **prevention**. What did Snow need to find out before anyone would act?

Scan it: the full case

Explore Snow's maps and records. Find one more piece of evidence he used.

epi-snow.ph.ucla.edu

Snow needed Whitehead. Research is rarely a solo sport. Before you research disease, you need to build a team that works.

If we split the work four ways, we'll finish in a quarter of the time.

Unless someone doesn't do their part. Last project, I made the whole poster alone.

And who decides what goes in? Four people means four opinions.

Four people also means four sets of ideas. And four people searching.

Working together with others to reach a shared goal.

Look again at Amara, Mateo, Yuna and Omar. Who is talking about a benefit? Who is talking about a challenge?

 Collaboration

List the benefits and challenges of working as a team on a research project. Include problems with research itself, too (for example, not knowing where to look).

Challenges

[illegible]

Task 3**What would you do?** Collaboration

Choose a solution for each problem. Then agree as a team which solution is best.

1

Two days before the deadline, one person has done nothing.

2

Two of you want to research different diseases. Neither will give in.

3

One person talks all the time. Another hardly speaks.

4

Your best source turns out to be from 2009.

1**Task 4****Our team charter: 10 top tips** Collaboration

Use Tasks 2 and 3 to agree the ten most important habits of a great research team. Write them as instructions, for example, 'Share sources by the end of each lesson'.

Keep this charter. You will score your team against it on pages {p:u1-s8c} and {p:u1-s9}.

2 Disease where you live

Some health problems affect so many people that they become everyone's business. These are **public health issues**. Communities and governments need to act on them, not just doctors.

Diseases can be sorted into two big groups. **Communicable** diseases can pass from one person to another, for example measles or tuberculosis. **Non-communicable** diseases do not spread between people, for example heart disease or diabetes.

What did the world die from in 2023?

The seven biggest causes of death worldwide. In 2023 about 61 million people died.

■ non-communicable ■ communicable

Source: World Health Organization (2026), The top 10 causes of death, based on Global Health Estimates for 2023.

public health issue

A health problem that affects a large part of a population, so the whole community needs to respond.

communicable

Able to spread from person to person (or from animals or the environment to people). Also called infectious.

9.4m

deaths from COVID-19 in 2021, when it was the world's top cause of death.

0.9m

deaths from COVID-19 in 2023, when it had dropped to 14th place.

But your country is not the world.

In low-income countries, seven of the ten biggest causes of death in 2023 were communicable diseases. In high-income countries, nine of the ten were non-communicable. The list for your country could look very different from the world list.

Talk it through

1. Why might the main causes of death be so different in different countries? Think about age, water, food, money, health care and vaccination.
2. Health data for some countries is less complete than for others. Why might that be? Why does it matter for a researcher?

Task 5

Health profile of a country

 Research

On your own. Choose your own country, or one your teacher gives you.

Country	
Top three causes of death	
Which of these are communicable?	
One cause that has gone down since 2000	
One cause that has gone up since 2000	
A public health issue the country faces now	
Source used: who made it, title, year, link	

Support

Start with the Our World in Data page below and choose your country from the menu.

Scan it: causes of death
Explore what people die from in any country.
[ourworldindata.org](https://ourworldindata.org/what-do-people-die-from) → what do people die from

Scan it: the world list
Compare the top ten lists for rich and poor countries.
[who.int](https://who.int/fact-sheets/top-10-causes-of-death) → fact sheets → top 10 causes of death

3 The invisible world

Micro- means very small. *Macro-* means very large.

Microorganisms, or microbes, are living things too small to see without a microscope.

Microbes are everywhere: in soil, in the sea, in the air and inside you. Your body is home to trillions of bacteria, and most of them are harmless or helpful. They help you digest food and keep harmful microbes out.

Only a tiny fraction of microbes cause disease. Scientists estimate that fewer than 1 in 100 kinds of microbe are a danger to humans. The ones that are dangerous are called **pathogens**.

How small is small?

Each picture zooms into the one before. 1 μm (one micrometre) is a thousandth of a millimetre.

Most viruses are up to 100 times smaller than a typical bacterium. They cannot reproduce on their own. They must get inside a living cell and use it to make copies of themselves.

microorganism

A living thing too small to see without a microscope. Also called a microbe.

pathogen

A microorganism (or other agent) that causes disease.

infectious disease

A disease caused by a pathogen getting into the body. Many, but not all, can spread between people.

Scan it

Microbiology
Society: what
microbes are and
why they matter.
microbiologysociety.org →
what is microbiology

Think and note

What surprised you most about microbes? What do you still want to know?

Five kinds of pathogen

1

Viruses

Tiny packages of genetic material that hijack living cells to copy themselves.

Examples: flu, measles, COVID-19

Bacteria

Single cells. Most are harmless; some release poisons or damage tissue.

Examples: cholera, tuberculosis, some food poisoning

Fungi

Yeasts and moulds. Most are harmless; a few infect skin, lungs or blood.

Examples: athlete's foot, ringworm, thrush

Parasites

Living things that live on or in a host. Here: malaria parasites inside red blood cells.

Examples: malaria, Guinea worm disease

Prions

Not alive at all: proteins that fold into the wrong shape (blue) and make normal ones (pink) do the same. Very rare.

Examples: Creutzfeldt-Jakob disease (CJD)

Task 6

Infectious or not?

Analysis

Tick the **blue box** if the condition is caused by a pathogen. Tick the **pink box** if it is not. Other causes include genes, injury, poor diet, allergies and lifestyle.

☐ ☐ malaria
☐ ☐ asthma
☐ ☐ tuberculosis
☐ ☐ hay fever

☐ ☐ type 2 diabetes
☐ ☐ cholera
☐ ☐ scurvy
☐ ☐ food poisoning

☐ ☐ measles
☐ ☐ a broken leg
☐ ☐ athlete's foot
☐ ☐ sickle cell disease

Stretch Some cancers are linked to infections. Find one example and its source.

4 Break the chain

1

An infectious disease spreads only if every link in a chain holds. Break one link and the chain falls apart. That is what prevention means.

Ways to break a link

prevention tool	links
Clean water and toilets	3, 4
Handwashing with soap	4, 5
Cooking food well and keeping it cold	1, 4
Bed nets and removing still water (mosquitoes)	4, 5
Covering coughs, masks, fresh air	3, 4, 5
Staying home when ill	3
Treating infected people	1, 2
Vaccination	6

The chain for cholera

The germ is a bacterium (1). It lives in the gut of infected people (2) and leaves in their faeces (3). It travels in dirty water or food (4) and enters through the mouth (5). Anyone who drinks that water can catch it (6). In 1854, removing the pump handle broke link 4.

transmission

The way a pathogen passes from one place or person to another.

vaccine

A substance that trains the immune system to recognise a pathogen, so the body is ready to fight it.

Think and note

Choose one prevention tool. Which link does it break, and why does it work?

Measles deaths each year

780,000 in 2000

95,000 in 2024

WHO estimates that measles vaccination prevented nearly 59 million deaths between 2000 and 2024.

Smallpox

1980

The year smallpox was declared eradicated, after a worldwide vaccination campaign. It is still the only human disease to be wiped out completely.

What about non-communicable diseases?

Heart disease, stroke and diabetes have no germ to stop. Prevention works on **risk factors** instead: tobacco smoke, unhealthy diets, too little physical activity, air pollution and alcohol. Many of these depend on the places where people live, not only on personal choices.

Scan it

WHO measles facts: find out why vaccination needs to reach almost everyone.

who.int → fact sheets → measles

Task 7**Chain reaction**

Analysis

In pairs. Choose one disease: malaria, measles, food poisoning, influenza or tuberculosis.

Link	For our disease	One way to break it
1 The germ		
2 Its home		
3 Way out		
4 The journey		
5 Way in		
6 The next person		

Which link would be easiest to break where you live? Why?

Guinea worm disease has no vaccine and no medicine. Yet it is close to becoming only the second human disease ever to be wiped out, after smallpox.

How do you stop a disease with no cure?

- filter drinking water through cloth or a pipe filter, so the water fleas are removed
- keep anyone with an emerging worm out of water sources
- treat ponds to kill the water fleas, and build safe wells
- find every case quickly; in some countries people receive cash rewards for reporting one

eradication

provisional

Not only humans. Guinea worm also infects animals, especially dogs in Chad. This makes the last steps to eradication much harder.

Why do you think eradicating a disease needs so many different people?

Reported human cases of Guinea worm disease, 1986 to 2025

Each step up the scale is ten times bigger than the one below it (a log scale).

Sources: The Carter Center, cases by year 1989–2022; WHO Weekly Epidemiological Record (2024) for 2023; The Carter Center (2026) for 2024 and provisional 2025 figures. The 1986 figure is an estimate. No yearly totals are shown for 1987–1988.

Even good sources can disagree. The Carter Center first reported 13 human cases for 2023. In February 2024 a laboratory test confirmed one more, and the figure became 14. For 2024, some reports give 13 and others 15. A careful researcher always checks the date and asks: is this figure final?

Task 8 Read the evidence

Analysis Evaluation

1. About how many times fewer cases were there in 2010 than in 1989?
2. Cases went up between 2005 and 2006. Suggest two possible reasons.
3. Which links in the chain of infection (page {p:u1-s4}) did the campaign break?
4. Why do you think the last few cases are the hardest to stop?

Scan it: the latest figures

WHO's page on Guinea worm worldwide. Has anything changed since this book was printed?

who.int → dracunculiasis → global epidemiology

5 Ask better questions

1

A research question works like a lens. A good one brings one thing sharply into focus.

Climb the question ladder

Topic	Malaria Not a question yet. Where would you even start?
Closed	Is malaria a disease? Yes. Done. A dead end.
Fact-finding	How many people get malaria each year? One number answers it. Useful, but not enough.
Too big	How can we stop all diseases? Nobody could answer this in a whole lifetime.
Researchable	How well do bed nets protect young children from malaria in Nigeria? Focused, needs evidence and judgement, and someone needs the answer.

Five tests for a strong research question

- 1 **Focused.** It is about one problem, in one place or one group of people.
- 2 **Needs investigation.** It cannot be answered with one quick fact.
- 3 **Needs judgement.** You will have to weigh up evidence: how well, why, which is better.
- 4 **Answerable.** You can find reliable sources in the time you have.
- 5 **Matters to someone.** There is a real audience who would want your answer.

research question

The focused question a research project sets out to answer.

Think and note

Write one weak question about disease, then climb the ladder to make it strong.

Four doors into disease research

Example starting points. Your team’s question can come through any door.

Prevention

Why does handwashing with soap reduce diarrhoeal disease?

How can a school canteen reduce the risk of food poisoning?

Distribution

Why is dengue fever appearing in places where it was rare?

Why are some diseases more common in cities than in the countryside?

Treatment

Why should antibiotics not be used for colds and flu?

Vaccination

How does a country decide which vaccines children receive?

Mateo

Our question could be ‘How do vaccines work?’

Yuna

That’s a good science question, but there’s nothing to judge. What if we asked why some families in our city delay vaccinations, and what helps them decide?

Task 9

Question storm

Research

Collaboration

Each person writes three questions about preventing disease. Pool them. Score each one against the five tests on page {p:u1-s5} (1 point per test), then choose one.

Question	1	2	3	4	5	Total

Our question:

We chose it because:

1

Five checks for any source

1

2

3

4

5

24

Source line-up

Research question: Does taking vitamin C stop you catching colds? (Sources A, B and C are made up for this task. Source D is real.)

A

Advert on a shopping website

ZESTIVA Immune+ 1000 mg

Never catch a cold again! Clinically proven vitamin C power for your whole family. Buy 2, get 1 free.

B

Social media post, 48,000 likes

@kai.trains I take 3 vitamin C tablets every day and I haven't had a single cold in two years. Trust me, it works. #immunity #health

C

Online news article, The Morning Ledger

Vitamin C halves your risk of colds, scientists say

Paragraph 6: the result came from studies of marathon runners, skiers and soldiers training in harsh conditions.

D

Summary of a systematic review (Cochrane, 2013)

Researchers combined 29 trials with 11,306 people. Taking vitamin C every day did not reduce how often ordinary people caught colds. Colds were slightly shorter: about 8% in adults and 14% in children. People under extreme physical stress caught half as many colds.

Task 10

Rank the sources

 Evaluation

Score each source from 1 (weak) to 3 (strong) on the five checks on page {p:u1-s6}. Then rank them.

Source	Who?	Why?	One-sided?	Agree?	When?	Rank
A						
B						
C						
D						

1. Source C is not false. Why is it still misleading?

2. Using all four sources, what is the best answer to the research question?

Scan it: source D

Read the review's plain-language summary. Does it match the summary above?

[pmc.ncbi.nlm.nih.gov/articles/PMC8078152](https://pubmed.ncbi.nlm.nih.gov/articles/PMC8078152)

7 Leave a trail

Every fact you use came from somewhere. A reference is the trail that lets your reader follow you back.

References do three jobs. They give credit to the people whose work you used. They let readers check your evidence. And they make your work more trustworthy, because you are showing where everything came from.

Reference recipes

Website

Author or organisation (year). *Title of page*. Website name. Link (accessed date).

World Health Organization (2026). *The top 10 causes of death*. WHO. <https://www.who.int/news-room/fact-sheets/detail/the-top-10-causes-of-death> (accessed 3 October 2026).

Book

Creator (year). *Title* [video]. Platform. Link (accessed date).

Write one for a video you have used.

Interview

Name, role (date). Interviewed by your name.

For example, your school nurse or a local pharmacist.

Your teacher may ask for a particular style, such as Harvard or APA. The habit matters more than the exact commas: who, when, what, where.

Think and note

Write a reference for one source you have used this week.

reference

The details of a source, so a reader can find it.

bibliography

A list of all the sources used in a piece of work, usually in alphabetical order.

plagiarism

Presenting someone else's words
or ideas as your own.

Omar

I copy the
reference before I
take any notes.
Hunting for a link
later is the worst.

One source, one card

Good notes are short, in your own words, and always linked to their source. Try this method for every source you use in the mission.

- 1. Write the full reference at the top before you read.
- 2. Read once without writing. Then close the page or look away.
- 3. Write up to five key points in your own words.
- 4. Copy at most one short quotation, in quotation marks.
- 5. Score the source on the five checks, and say how it helps answer your question.

Task 11

Make a source card

Research

Use one of the sources from this unit, or a source for your team's question.

Reference:

Key points:

One quotation:

How it helps our question:

Five checks (1-3)

Who?

Why?

One-sided?

Agree?

When?

A range of sources makes stronger research

Mix websites with data, books, news, videos or podcasts, and interviews. Who in your community could you interview about preventing disease?

1

Mission brief. Research your question from page {p:u1-s5b} using at least five sources of different kinds. Evaluate every source. Present your answer, your evidence and your references to an audience who needs it.

A partner school in another country

for decision-makers who want evidence

3 Share out the roles

Everyone researches. A role means you are responsible for something, not that you do it alone. Choose roles that use strengths, or that stretch someone who wants to grow.

Coordinator

Keeps the plan and the time.
Runs the team check-ins.

7		1 2 3 4
8		1 2 3 4
9		1 2 3 4
10		1 2 3 4

Our two targets for the rest of the research

What we are changing in the plan

Just for me

So far I have:

I could do more of:

One thing I will change:

Share what you found

Six habits of strong presenters

- 1 **Open with a hook** a story, an image or a surprising number.
- 2 **Give one clear answer** to your question, early.
- 3 **Show the evidence** and say where it came from.
- 4 **Be honest about limits** what you could not find out.
- 5 **End with an action** something your audience can do.
- 6 **Rehearse and time it** then cut what is not needed.

Amara
We had too many facts. Yuna said: what is the one thing we want them to remember? That changed everything.

Task 15		Two stars and a wish	Communication	Evaluation
While you watch other teams, note two things that worked well and one thing to improve. Focus on how well the format suited the audience.				
Team and format	Two stars	A wish		

Talk it through

- 1. Which presentation style worked best for its audience? Why?
- 2. Did any team change your mind about how a disease can be prevented?

9 Look back

1

Snow and Whitehead learned from each other. Now it's your turn to learn from your team.

Task 16

Team debrief

Reflection

Collaboration

Talk as a team first, then write your own answers.

Which of our ten tips did we really follow?

Which targets from the halfway check worked? Which did not, and why?

What problems did we have, and what did we do?

What would we do differently next time?

Omar

I realised I'm good at checking facts, but I waited for others to ask me. Next time I'll offer.

Yuna

I spoke up more because we took turns. I want to keep doing that, even when I'm not sure.

My target for the next unit

On page {p:u1r} you answered: **is it better to prevent a disease or to cure it?** Read your first answer. Has it changed? Use one piece of evidence from this unit in your answer.

1

Quick quiz

1. What is the difference between a communicable and a non-communicable disease?
2. Name the five kinds of pathogen.
3. Which link in the chain of infection does vaccination break?
4. Give two reasons why a source might be biased.
5. What three jobs does a reference do?

Judge your sources

Top researchers do not just collect sources. They compare them and explain how far each one can be trusted. Use the source line-up on page 25.

What makes a top answer

	Developing	Secure	Excellent
Use of checks	Describes the sources.	Uses two or more of the five checks.	Uses several checks and explains how each affects trust.
Comparison	Talks about each source separately.	Compares the two sources directly.	Compares them point by point, with precise details.
Judgement	Gives an opinion without reasons.	Reaches a clear judgement with a reason.	Reaches a justified judgement and notes its limits.

Task ★

Practise it

📏 Evaluation

Compare Source B and Source D. Which is more useful for answering ‘Does vitamin C stop you catching colds?’ Explain your judgement.

Tip

Name the check you are using: ‘The purpose of Source B is..., which means...’

My level and why:

To reach the next level I will:

Inside the lens: speech, sound, writing and the links between people.

On the way, you will

- explore the many ways people communicate
- think about how language shapes who we are
- take arguments apart: claims, reasons and evidence
- test claims that spread from source to source
- judge what translation tools can and cannot do
- explain how your own perspective has changed

Before you start

Think of a time you were misunderstood, or misunderstood someone else. What went wrong?

Here is how three sources describe the cost of the lost spacecraft. All three come from real reporting about the mission.

reported by many news stories as the cost of the orbiter.

given by other sources as the cost of the whole mission.

Can two different numbers both be correct?

 Communication

1. Explain in your own words why the spacecraft was lost.
2. Why might two trustworthy sources give different costs? What would you check before using either number?
3. The navigation team noticed a problem. Suggest two reasons why their warning did not lead to action.
4. Describe a time when people in your school or family used the same word to mean different things.

1. Is a misunderstanding ever only one person's fault?
2. What could the two teams have agreed at the start to stop this happening?

1 So many ways to say it

People communicate with words, but also with faces, hands, pictures, silence and timing.

 Reflection
 Analysis

Which languages and ways of communicating do you use in each part of your life?

Where	Languages I use	Other ways I communicate	With whom
At home			
With friends			
At school			
Online			
In shops or on transport			

Compare with your team. What surprised you? Where do your maps overlap?

At home I speak Korean, at school English, and with Amara we mostly talk in memes.

My grandmother says I speak Arabic 'like a tourist'. That hurt a bit, but she's helping me.

 Talk it through

1. Is a gesture like a thumbs-up understood the same way everywhere? How could you find out without relying on one website?
2. What gets lost when a message is sent as text instead of being said face to face?

2 Language and who we are

The language you dream in, joke in or argue in is part of who you are. That is why questions about language can feel personal.

Many people grow up with more than one language. A **home language** may be different from the language used at school. Some families move country and the children's first language slowly fades, while grandparents still use it every day.

When a language disappears, more than words are lost. Songs, stories, place names, jokes and knowledge about plants, animals and weather can disappear with it.

At the same time, a few global languages help people from different countries study, trade and work together. Many families see learning one of them as a route to a better future.

These pulls can clash. That is why there is no simple answer to questions such as: *Which language should children learn to read in first?*

home language

The language a person mainly uses with their family.

identity

The qualities, beliefs and connections that make a person or group who they are.

Careful. Mateo's cousin is one example. One story can raise a question, but it cannot prove a general claim.

Three perspectives

Amara

My parents want me to be perfect in English. They say it opens doors.

Mateo

My cousin's school teaches in Spanish and Wayuunaiki, the language of their community. Her grades went up.

Omar

If everyone speaks the same global language, isn't that easier for everyone?

Think and note

Which language or way of speaking is most connected to who you are? Why?

 Analysis **Evaluation**

Issue: Should every school in the world teach mainly in one global language? Record a perspective for each ring, with the reason and any evidence behind it.

I see why you think that, but... / What evidence makes you say that? / Could both be true in different places? / I've changed my mind because...

2

Evidence: UNESCO has reported that about 40 per cent of people worldwide do not have access to education in a language they speak or understand, and links this to weaker learning.

A claim supported by reasons and evidence.

A statement that someone says is true and wants you to accept.

- **No evidence:** the claim is just repeated louder.
- **One example used as proof:** “My brother did it and he’s fine.”
- **Emotional words instead of reasons:** “Only a fool would disagree.”
- **Either/or thinking:** “Either we all speak English or nobody will understand each other.”
- **Old or unnamed evidence:** “Studies show...” Which studies? When?
- **A source with a reason to persuade,** presented as neutral.

Write your own claim, reason and evidence about a language issue.

Argument line-up

Both arguments are made up for this task.

Argument A: blog post by a language-learning app

Learning English is the single best thing you can do for your future. Everyone knows that English speakers earn more. Thousands of our users have already changed their lives. Start your free trial today!

Argument B: letter to a newspaper from a retired teacher

Children learn to read best in a language they already speak. In my 30 years of teaching, pupils who started in their home language later learned English faster too. Governments should fund books in local languages. Of course, families also need English for work, so schools should add it step by step.

Task 4

Weigh the arguments

Evaluation

	Argument A	Argument B
What is the claim?		
What reasons are given?		
What evidence is given? Is it checkable?		
Who wrote it, and why?		
Does it consider other views?		
Score out of 5		

Argument B uses the teacher’s own experience. How strong is that kind of evidence? What would make it stronger?

Stretch

Rewrite Argument A so it is honest and better supported.

2

Case: How many words for snow?

Today Researchers who work with Inuit communities point out that Inuit languages build long words from many parts, and that people who live on ice do use many precise terms for snow and sea ice. Counting 'words' is the hard part.

- A claim repeated by many sources is not stronger if they all copied each other.
- Correcting a myth can create a new myth, if the correction is also simplified.
- Some questions depend on definitions. Ask: what exactly is being counted?
- Listen to the people the claim is about. Inuit speakers are the best source on Inuit languages.

First-hand evidence from the time or from the people involved.

A source that describes or explains other sources.

Note a claim you have heard repeated many times. Where did it start?

Task 5 Trace a claim

 Evaluation  Research

In pairs. Choose a claim about language or communication that you have heard, or one from the box below.

'Most communication is body language, not words.' / 'Babies can learn any language.' / 'Some languages have no word for blue.'

The claim, exactly as we found it	
Where we found it (reference)	
What source does that source use?	
The earliest source we could find	
Did the claim change on the way? How?	
What do experts say now?	
Our verdict: true, false, or 'it depends'? Why?	

Mateo

Three websites said the same thing, word for word. That isn't three sources. That's one source and two copies.

2

2

But meaning is not only in the words. Jokes, idioms, politeness and tone depend on culture. Languages with fewer speakers often have much less text online for translation tools to learn from, so results can be weaker. And a tool cannot tell you when it is wrong.

1. Write a short sentence in your best language.
2. Translate it into another language with an app.
3. Translate the result back into your language.
4. Compare. What changed? Where did the meaning slip?
5. Ask a person who speaks the other language to check the middle step.

A phrase whose meaning is different from the meaning of its separate words, such as 'break the ice'.

Translation done automatically by
computer software.

I typed 'my teacher is cool' and it came back as 'my teacher is cold'. Not the same!

When would you trust a translation app? When would you want a person?

In your team. Include at least one idiom and one polite request.

Our sentence	Translated	Translated back	What changed?

Use your results to complete the judgement below.

The tool is reliable when:

The tool is unreliable when:

We would trust it for:

We would not trust it for:

 Talk it through

1. Should a hospital use a translation app to talk to a patient? What about a tourist ordering food? Why is the answer different?
2. Who loses out when tools work well for big languages but poorly for small ones?

6 The mission

Your school leaders want advice on a language question. They want a fair report, not a speech for one side.

Mission brief. Choose a question. Research at least three perspectives. Evaluate the arguments and sources on each side. Write a balanced report of about one page, ending with your team's reasoned recommendation.

2

1 Choose a question

Tick one, or write your own.

- ☐ Should students be allowed to use their home language in lessons?
- ☐ Should our school offer clubs or classes in students' home languages?
- ☐ Should every student learn sign language basics?
- ☐ Should our school signs and letters to families be in more than one language?

2 Gather perspectives

Who is affected? Think about students, families, teachers, school leaders and the wider community. Try to hear at least one perspective first-hand: interview someone.

Perspective 1:

Perspective 2:

Perspective 3:

2

References List every source you used.

 Evaluation Communication

Check	Yes / partly / no	Comment
At least three perspectives are explained fairly		
Arguments are evaluated, not just described		
Evidence is referenced and up to date		
The recommendation follows from the evidence		
The language suits school leaders		

2

Task 8 How has my perspective changed?

Before this unit I thought...

52 Unit 2 Understanding each other

On page 37 you described a time you were misunderstood. Using what you have learned, explain what could have prevented it.

2

Quick quiz

1. What is the difference between a claim and evidence?
2. Give two signs that an argument is weak.
3. Why might two trustworthy sources give different numbers for the same thing?
4. What is the back-translation test?
5. Why is a claim repeated by many websites not always stronger?

Build a balanced argument

Stage 9 is about arguing well in writing: showing both sides fairly, then reaching your own reasoned judgement.

What makes a top answer

	Developing	Secure	Excellent
Both sides	Mostly one side.	Both sides, each with a reason.	Both sides explained fairly, with evidence.
Evidence	Opinions or one example.	Some relevant, referenced evidence.	Strong evidence, and its weaknesses are noted.
Judgement	Repeats one side.	A clear conclusion with a reason.	A conclusion that weighs both sides and explains why one is stronger.

Task ★

Practise it

📏 Evaluation

💬 Communication

Should schools teach mainly in one global language? Write one paragraph for, one paragraph against, then a judgement.

Tip

Use linking words: 'However...', 'On the other hand...', 'Taking both views together...'

My level and why:

To reach the next level I will:

Inside the lens: wheels, balls, lanes. Games that everyone can play, if we design them that way.

Your team will find out who plays sport in your school and who misses out, then propose a change backed by your own data.

- explore why sport and activity matter for health and happiness
- identify the barriers that keep people out of sport
- interpret real data and spot patterns, causes and consequences
- design a survey and test your predictions
- analyse how sports can be adapted so more people can play
- propose a solution and argue for it with evidence

Which sport or activity do you enjoy most? Who in your life does not get to do it, and why?

From one hospital to the world

Athletes taking part. 1948 was one event at one hospital; from 1960 the Games were international.

Sources: International Paralympic Committee; National Geographic (2024). Figures for 1976 and 2024 are given as 'more than'.

Task 1

What changed, and why?

Analysis

1. Describe the trend in the chart in one sentence.

2. Suggest two causes of the growth. What evidence would you need to check them?

3. Guttmann's idea was first about health. What other benefits of the Games can you think of, for athletes and for society?

4. The 1948 bar is not really comparable with the others. Why not? What does this teach you about reading charts?

Amara

1948 was sixteen people. That's smaller than our class. Everything big starts with one person deciding it matters.

1 Why play?

Sport is not only about winning. For most people it is about health, friendship, fun and feeling part of something.

The World Health Organization recommends that children and adolescents do an average of at least 60 minutes of moderate to vigorous physical activity a day. That includes sport, but also walking, cycling, dancing and active play.

Regular activity strengthens the heart, muscles and bones. It is linked to better sleep and mood, and it can help people cope with stress. Team sport can also build friendships and a sense of belonging.

Benefits at three levels

Personal

fitness, mood, confidence,
skills, friends

Local

clubs, events, community
pride, jobs, healthier towns

Global

- international events, shared rules, connections between countries

Yuna

I don't like competitions. But I walk to school and dance at home. Does that count?

physical activity

Any movement of the body that uses energy, from walking to playing sport.

recreation

Things people do for enjoyment
in their free time.

Think and note

Which benefit of sport matters most to you? Which matters most to your community?

Day	Activities	Minutes	How I felt
Mon			
Tue			
Wed			
Thu			
Fri			
Sat			
Sun			

1. What was your daily average? How does it compare with the WHO recommendation?
2. What helped you to be active? What got in the way?
3. Compare with your team. Do you see any patterns?

1 Why play? **61**

3

The World Health Organization estimates that about 1.3 billion people, around one in six people on Earth, experience significant disability. Many want to play sport but find that the facilities, equipment or attitudes around them make it hard.

barrier

inclusion

stakeholder

Common barriers

Cost fees, kit, transport	Time homework, jobs, caring for family	Access no facilities nearby, steps, no adapted equipment	Confidence fear of being judged, not 'sporty'
Expectations ideas about who sport is 'for'	Safety unsafe routes, poor lighting	Information not knowing what is available	Culture clothing rules, timing, gender-separate spaces

Which barrier have you seen in your own school or town? Describe it.

 Analysis

Imagine the issue is: **Should our town build one big new stadium or several small, free sports spaces?**

Stakeholder	Their perspective	Barriers that matter to them	What they would want
A wheelchair user aged 14			
A girl who has never played a team sport			
A parent with two jobs			
The school PE teacher			
The local council			
A sports club coach			

Whose perspective is easiest to forget? Why does that matter when decisions are made?

1. Is it fair to spend public money on elite sport when many children cannot play at all?
2. Can one change remove more than one barrier at the same time?

3 Reading the numbers

Data can show patterns that no single story can. But you need to read it carefully.

In 2019, researchers working with the World Health Organization published the first global estimate of how active adolescents are. They used surveys from 146 countries, carried out between 2001 and 2016, with students aged 11 to 17.

Adolescents who were not active enough (2016)

'Not active enough' means less than an hour a day of moderate to vigorous activity. Source: Guthold, R. et al. (2020), The Lancet Child & Adolescent Health; reported by WHO.

Girls were less active than boys in all but four of the countries studied. Between 2001 and 2016, the figure for boys improved slightly, from 80 to 78 per cent. For girls it stayed at 85 per cent.

trend

The general direction in which data changes over time.

correlation

A link between two things that change together. It does not prove one causes the other.

 Analysis

Support

South Korea was the highest. In Busan my friends studied until late every night. That could be one cause. I want to check it, not just guess.

Careful. It's a correlation until we find better evidence.

4 Asking your school

Secondary sources tell you about the world. To find out about your own school, you need primary research.

A **survey** asks many people the same questions so you can compare their answers. Before you start, write down your **predictions**: what do you expect to find? Then your data can test them.

Four kinds of question

Closed	Do you play a sport outside school? Yes / No	Easy to count. Little detail.
Multiple choice	What stops you playing more? Tick all that apply.	Easy to count. Your options shape the answers.
Scale	How confident do you feel in PE? 1 2 3 4 5	Shows strength of feeling.
Open	What would make sport better for you?	Rich detail. Harder to count.

Avoid questions that push people

Leading: *Don't you agree that our sports hall is too small?*

Better: *How would you describe the size of our sports hall?*

Double: *Do you enjoy PE and team sports?* (What if someone enjoys one but not the other?)

Respect privacy: make answers anonymous, explain why you are asking, and let people skip questions.

primary research

Collecting new information yourself, for example by survey, interview or observation.

prediction

What you expect to find, written down before you collect data.

sample

The group of people who answer your survey.

Our research question:

Prediction 1:

Prediction 2:

Who we will ask (sample):

How many people:

How we will keep answers anonymous:

Write five survey questions. Use at least three kinds. Test them on one person first and improve them.

1

2

3

4

5

Made-up results from one class: "Which sport do you play most?"

Sport	Boys	Girls
Football	18	6
Basketball	9	7
Dance	2	11
Swimming	6	8
None	5	12

Turn the practice data into a bar chart on paper. Write two patterns and one question the data raises but cannot answer.

[illegible]

3

Many sports have been adapted so that more people can play. Some changes are small: a lower net, a ball that makes a sound, a slower pace. Each change solves a problem.

People with and without intellectual disabilities train and play on the same team

1. Name the problem precisely: who misses out, and when?
2. Find the causes. There is usually more than one.
3. Think of solutions for each cause.
4. Check each solution: cost, evidence it works, who benefits, side effects.
5. Choose, and explain why.

A sport with changed rules or equipment so more people can take part.

Something that happens as a result of an action or event.

Invent a small rule change that would let more people play a sport you know.

Task 6 Cause, consequence, solution

Analysis

In pairs. Choose a barrier from page 62.

The problem	
Causes	
Consequences: personal	
Consequences: local	
Possible solutions	
Best solution, and why	
Who would need to act?	

Mateo

Our club's solution was free bikes. But half the kids didn't have a safe road to ride on. Fixing one cause wasn't enough.

3

6 The mission

Use your survey to find out who misses out on sport at your school. Then propose a change that would help.

Mission brief. Run your survey with at least 20 people. Analyse the results and test your predictions. Present a proposal for one change, supported by your data and at least two secondary sources, to your PE department or student council.

1 Results

Draw your key chart here.

2 Were we right?

Prediction 1 was:

Prediction 2 was:

The biggest surprise:

3

Task 7

Pitch and feedback

 Communication
  Collaboration

Pitch your proposal in three minutes. The audience scores each pitch from 1 to 4.

Team	Clear problem	Data used well	Realistic solution	One question for them

Which part of your proposal is weakest? How could you make it stronger?

7 Look back

Analysis is not just about numbers. It is about seeing connections that other people miss.

Task 8

What did the data teach me?

Reflection

Analysis

One pattern I would not have noticed without data	One limit of our survey
How my view of 'sport for all' changed	Someone's perspective I understand better now

Amara

I used to think people who didn't play just didn't want to. The survey showed most of them did. They just had no way in.

Task 9 Team and me		Reflection	Collaboration
My role in the survey and proposal	How we shared the work		
A strength I used	My target for the next unit		

Back to the beginning

On page 57 you named someone who does not get to do your favourite activity. What would help them take part?

Check your progress

I can...	Not yet	Getting there	Confident
I can describe trends and patterns in data, using numbers. <i>Analysis</i>	☐	☐	☐
I can suggest causes and consequences, and say what evidence I would need. <i>Analysis</i>	☐	☐	☐
I can explain the perspectives of different stakeholders. <i>Analysis</i>	☐	☐	☐
I can design a fair survey and test predictions with it. <i>Research</i>	☐	☐	☐
I can propose a realistic solution to a problem and justify it. <i>Analysis, Communication</i>	☐	☐	☐
I can explain the difference between correlation and cause. <i>Analysis</i>	☐	☐	☐

Quick quiz

Answer from memory first. Then check the pages.

1. What does the WHO recommend for adolescents' daily activity?
2. Give two examples of barriers to sport.
3. What is a leading question? Give an example.
4. Why does a correlation not prove a cause?
5. Name two adapted sports and explain the adaptation.

Write about data

Examiners and teachers love analysis that uses numbers precisely and then explains what they mean. Use the chart on page 64.

What makes a top answer

	Developing	Secure	Excellent
Use of data	Vague ('lots', 'most').	Accurate numbers from the chart.	Precise numbers chosen to support each point.
Explanation	Describes only.	Suggests a cause or a consequence.	Links causes and consequences, at more than one level.
Caution	Treats the data as perfect.	Notes one limit of the data.	Explains how limits affect the conclusions.

Task ★

Practise it

Analysis

Analyse what the chart shows about adolescents' physical activity. Include numbers, a comparison, a possible cause and a consequence.

Tip

Describe, compare, explain, connect, question: the five steps from page 148.

My level and why:

To reach the next level I will:

Inside the lens: a fingerprint, a key, a magnifying glass.
Evidence, not guesswork.

Feeling safe

Your mission

Your team will prepare and run a mock trial, working together so that every role matters and the verdict follows the evidence.

On the way, you will

- solve a mystery by sharing clues as a team
- explore why societies make laws, and how laws differ
- compare feeling safe with being safe
- learn to protect yourself and others online
- find out what makes a trial fair
- explain how your own perspective has changed

Before you start

What makes you feel safe, at school, at home and in your town? What makes you feel unsafe?

Clue 1 The trophy cabinet was found locked on Friday morning. The lock was not damaged.	Clue 2 Only three people have a key to the cabinet: the head teacher, the caretaker and the PE department.
Clue 3 The alarm system shows that nobody entered the building between 6 pm on Thursday and 7 am on Friday.	Clue 4 A student says she saw ‘someone in a tracksuit’ carrying a large box to the car park at about 4.30 pm on Thursday.
Clue 5 Ms Okafor, the PE teacher, left school at 4.40 pm on Thursday for a three-day training course. Her phone is switched off.	Clue 6 In the PE office there is a receipt from an engraving shop, dated last week: ‘Collection Thursday after 4 pm. Return Monday.’
Clue 7 A post online says: ‘Trophy STOLEN by kids from our rival school!!!!’ It has been shared 300 times.	Clue 8 The new team captain was chosen on Wednesday. Every year, the captain’s name is engraved on the trophy.

Task 1

Solve it together

Collaboration

Analysis

What we think happened:

Clues that support it:

What we still don't know:

How did your team work? Did everyone share? Did anyone hold back a clue, or rush to a conclusion?

4

Task 2

Diamond ranking

🔗 Collaboration

📊 Evaluation

In your team. You must all agree on the final order.

Rank nine reasons for having laws. Most important at the top, least important at the bottom.

Protect people

Protect rights

Settle disagreements

Guide behaviour

Share resources

Hold power to account

Protect the environment

Make society fair

Your own idea

A diamond-shaped grid for ranking reasons. The grid consists of 9 empty rectangular boxes arranged in a diamond shape: 1 box at the top, 2 boxes in the second row, 3 boxes in the third row, 2 boxes in the fourth row, and 1 box at the bottom.

How did you reach agreement? Did anyone change their mind? Why?

A series of 12 horizontal lines for writing a reflection on the ranking process.

🗨️ Talk it through

1. Should the age of criminal responsibility be the same in every country? Why might countries disagree?
2. Is it ever right to break a law? Can you think of an example from history?

4

List five places you go often. Score how safe each one feels (1 = very unsafe, 5 = very safe). Then say why, and what would make it feel safer.

Place	How safe it feels	Why	What would help
	12345		
	12345		
	12345		
	12345		
	12345		

1. Compare your team's maps. Are the reasons personal, local or global?
2. How could you find out whether your feelings match the facts? Which sources would you trust?

4

4

Scams and phishing

- It creates urgency: 'Act now or lose your account!'
- It asks for passwords, codes or bank details.
- The sender's address or link looks slightly wrong.
- It offers something too good to be true.
- It asks you to keep it secret.
- The spelling or style does not match the real organisation.

Cyberbullying is bullying with digital technologies: messages, posts, images or exclusion online. It can feel like there is no escape. UNICEF advises that reporting is key, that you can block and report people on most platforms, and that keeping a record can help to stop it. If it is happening to you or a friend, tell an adult you trust.

Pretending to be a trusted sender
to trick people into giving away
information or money.

Bullying that uses digital technology, such as messages, posts or images.

The record of everything you do online, which can last for a long time.

UNICEF: ten things teens want to know about cyberbullying.
unicef.org/stories/how-to-stop-cyberbullying

What would you say to a friend who received a scam message?

Task 4 Spot the scam

 Evaluation

All four messages are made up. Which are scams? Which warning signs do you see?

A Text message
SchoolPay: your lunch account will be closed today. Confirm your card details here: schoolpay-secure-login.co

B Email from your school
Reminder: sports day is moved to Thursday because of rain. Check the school website for the new timetable.

C Direct message
Hey!! U won a free phone!! just send your address and a photo of your ID. Don't tell anyone or u lose it

D Game chat
I can give you 5,000 free coins. Just log in through my link with your username and password.

A:

D:

Task 5 Our online safety charter

 Collaboration  Communication

As a team, agree five rules that would help students your age stay safe and kind online. Every rule must be agreed by everyone.

1

2

3

4

5

4

Five principles of a fair trial

The accused does not have to prove they are innocent. The prosecution must prove guilt.

Decisions must be based on evidence that can be checked and questioned.

Everyone accused of a crime can tell their side and be helped by a lawyer.

✚ **Unimpartial judge**
The person deciding must not be on either side.

In most cases, trials happen in public so people can see they are fair.

trial

A formal process in a court to decide whether someone is guilty of a crime.

A group of ordinary citizens who listen to the evidence in a trial and decide on the verdict.

The decision at the end of a trial:
guilty or not guilty.

In the trophy case, everyone had a verdict before anyone had evidence. That's the opposite of a fair trial.

Which principle of a fair trial do you think matters most? Why?

Roles in a courtroom

Judge

Keeps order, makes sure rules are followed, explains the law to the jury.

Defence

Presents the accused's side and questions the prosecution's evidence.

Accused

Can choose to speak, or to stay silent.

Court reporter

Writes a fair, short record of what happened.

Prosecution

Presents the evidence that the accused is guilty.

Witnesses

Say what they saw or know, and answer questions.

Jury

Listens to everything, discusses, and reaches a verdict.

 Talk it through

1. Which role would you find hardest? Why?
2. Why is it important that the defence and the prosecution both prepare well, even if you think you know the answer?
3. How is a jury discussion like good teamwork? How is it different?

Task 6

Fair or unfair?

Evaluation

Which principle of a fair trial (page 86) is broken in each case? Explain.

1. The judge is the accused person's aunt.
2. The jury reads social media posts about the case during the trial.
3. The accused is not allowed to call any witnesses.
4. The trial is held in secret, and nobody is told the verdict.

4

Five approaches

crime prevention

community

Several studies have found that better street lighting is linked to less crime in some places, though researchers still discuss exactly why. Programmes that give young people somewhere to go and something to do also have supporters. Some people argue that tougher punishments work best; others point to evidence that the chance of being caught matters more than the size of the punishment.

Which approach to preventing crime do you think works best? What evidence would you want?

4

Mission brief. Your class becomes a court. Teams prepare the prosecution, the defence and the witnesses; others form the jury. Prepare well, listen carefully, and let the evidence decide.

Before the trial: what do you think happened? Write it down, then see if the evidence changes your mind.

Task 8 Prepare as a team

🔗 Collaboration

Our team's role:

Who does what:

Our three strongest points:

A question we expect, and our answer:

Task 9 Jury room

🔗 Collaboration

📊 Evaluation

Jury rules: everyone speaks before anyone votes. Discuss the evidence, not the people. If you are not sure the accused is guilty, the verdict must be 'not guilty'.

Strongest evidence of guilt:

Strongest reason for doubt:

Our verdict:

Why:

4

Amara

I was sure Sam did it. Then the defence asked why a guilty person would keep the paint in their school bag for two days. I had to think again.

7 Look back

Good teams do not just share the work. They help each other think better.

Task 10 Reflective log: my perspective

 Reflection

Choose one issue from this unit: laws, feeling safe, online safety, fair trials or crime prevention.

At the start, my perspective was...

Now my perspective is...

What changed it: research, discussion, or both?

A local or global example that mattered

When our team worked best	A disagreement, and how we handled it
How I supported someone else	My target for the next unit

On page 77 you wrote about what makes you feel safe and unsafe. Would you add or change anything now?

Check your progress

I can...	Not yet	Getting there	Confident
I can share information and ideas so my team reaches a shared outcome. <i>Collaboration</i>	☐	☐	☐
I can support and encourage others to take part, and listen to their ideas. <i>Collaboration</i>	☐	☐	☐
I can help my team reach agreement and handle disagreement constructively. <i>Collaboration</i>	☐	☐	☐
I can explain why laws exist and how they differ between countries. <i>Analysis</i>	☐	☐	☐
I can judge evidence and avoid jumping to conclusions. <i>Evaluation</i>	☐	☐	☐
I can explain how my perspective changed through research and discussion. <i>Reflection</i>	☐	☐	☐

Quick quiz

Answer from memory first. Then check the pages.

1. Give three reasons why societies have laws.
2. What does 'innocent until proven guilty' mean?
3. Name three warning signs of a phishing message.
4. Why might feeling safe and being safe be different?
5. What happened to the missing trophy?

Reflect on teamwork with evidence

What makes a top answer

	Developing	Secure	Excellent
Specific examples	General statements ('I helped').	One clear example.	Several precise examples.
Honesty	Only positives.	A strength and a weakness.	Balanced, honest and linked to the team's outcome.
Next steps	No target.	A clear target.	A realistic target with a plan to reach it.

 Reflection Collaboration

Write a reflection on your part in the mock trial: a strength, an example of it, a challenge, how the team dealt with it, and a target.

My level and why:

To reach the next level I will:

Inside the lens: a plane, a suitcase, the sea. Tourism connects places. It also changes them.

Your team will prepare a short talk or podcast on tourism in your area for a real audience, and answer their questions live.

- explore the benefits and costs of tourism at three levels
- shape the same information for different audiences
- listen actively and respond to other people's ideas
- choose visuals that help, not distract
- compare informative and persuasive messages
- present clearly and handle questions with confidence

Think of a place you have visited, or a place visitors come to near you. Who gains from the visitors? Who might lose?

Venice, Italy, is one of the most visited cities on Earth. Millions of people come every year to see its canals, bridges and palaces.

Tourism also pays for a great deal. It brings jobs, keeps restaurants and museums open, and helps pay to look after historic buildings.

Venice is not alone. Barcelona, Amsterdam, Kyoto and many other places are asking the same question: how many visitors is too many, and who should decide?

When so many visitors come to a place that it harms the environment, local life or the visitors' own experience.

The people a message is for.

My uncle drives a tourist boat in Cartagena. For him, more visitors means more money. For my grandmother, it means crowded buses.

Which group in your area gains most from visitors? Which group has least say?

Four voices

These are made up, but they reflect views reported in many tourist cities.

A resident

Every summer my street is full of strangers and suitcases. My rent has doubled. My children may have to move away.

A café owner

Visitors keep my business alive. Without them, I would have to close and my six staff would lose their jobs.

A visitor

I saved for two years to come here. I want to see the city respectfully, but nobody tells you how.

A city official

We must protect the city for the people who live here while welcoming visitors who respect it.

Task 1 Who is speaking to whom?

Communication Analysis

1. For each voice, what is the speaker's main message?
2. Who do you think each speaker is trying to persuade? How can you tell from their words?
3. Which voice is most persuasive to you? Is it the one with the best evidence, or the one with the strongest feelings?
4. Write one question you would ask each speaker.

5

According to UN Tourism, about 1.4 billion international tourist arrivals were recorded in 2024, around 99 per cent of the 2019 level. Visitors spent an estimated 1.6 trillion US dollars.

A horizontal bar chart titled 'international tourist arrivals, 2024 (millions)'. The y-axis lists five regions: Europe, Asia and the Pacific, Americas, Middle East, and Africa. The x-axis represents the number of arrivals in millions, with major grid lines at 0, 200, 400, 600, and 800. Each region is represented by a blue bar with its corresponding value labeled at the end: Europe (747m), Asia and the Pacific (316m), Americas (213m), Middle East (95m), and Africa (74m).

Region	International Tourist Arrivals (millions)
Europe	747m
Asia and the Pacific	316m
Americas	213m
Middle East	95m
Africa	74m

One widely cited study estimated that tourism, including travel, food and shopping, is responsible for about 8 per cent of the world's greenhouse gas emissions. Flights make up a large share.

Tourism can also protect nature and culture when visitors' money pays for national parks, museums and traditional crafts. Whether it helps or harms often depends on how it is managed.

One visitor arriving in a country for a trip. One person on three trips counts three times.

Find one fact about tourism in your own country. Note it with its source.

Level	Benefits of tourism	Costs of tourism
Personal (a visitor or a local person)		
Local (a town or city)		
Global (the world)		

1. Should the number of visitors to a popular place be limited? Who should decide?
2. Is it fair that people in rich countries fly more than people in poor countries, while everyone shares the effects on the climate?

5

Rewrite this fact for each audience. Change the words, the length and the tone, but keep it accurate.

I always want to put in every fact. Yuna asked me: what is the ONE thing they should remember? Annoying. Also right.

3 Listen, then respond

Communication is not only speaking. Half of it is listening well enough to respond to what someone actually said.

Active listening means focusing on the speaker, checking you have understood, and responding to their ideas rather than waiting for your turn. It is a skill you can practise, and people notice when you do it.

Six discussion moves

Say back

So you're saying that... Have I got that right?

Ask

What makes you think that? Can you give an example?

Build

Yes, and another reason is...

Challenge kindly

I see it differently, because...

Connect

That links to what Omar said about...

Sum up

So far we agree that... but we disagree about...

Watch out for interrupting, planning your answer while others talk, repeating a point already made, and attacking the person instead of the idea.

active listening

Listening carefully, checking understanding and responding to what the speaker said.

Think and note

Which discussion move do you use least? Plan when you will try it this week.

5

Task 4

Communication

Collaboration

Five students discuss in the middle. Everyone else observes one speaker each. Then swap.

Question: Should our town try to attract more tourists?

Speaker	Say back	Ask	Build	Challenge	Connect	Sum up

Feedback for the speaker I observed: one strength, one thing to try next time.

Omar

When I was observed, I found out I never asked questions. I just waited to talk.

4 Show, don't just tell

Visuals can make a message clear and memorable, or bury it. Choose them on purpose.

Five rules for visuals

1 One idea per slide

If you need two ideas, use two slides.

2 Big, few words

The audience should listen to you, not read a wall of text.

3 Show the data simply

One clear chart beats a table of numbers. Label it and give the source.

4 Pictures with a job

Every image should explain or prove something, not just decorate.

5 Source everything

Put the source under every chart, fact and image you did not make.

visual aid

An image, chart, object or slide that helps an audience understand a message.

Yuna

Our first slide had 120 words. Our last one had six words and a photo. Guess which one people remembered.

Think and note

Describe the best visual you have seen in a presentation. Why did it work?

TOURISM!!!!

Tourism is when people travel to other places for holidays or business and there are many types of tourism such as beach tourism, city tourism, eco tourism, adventure tourism, and tourism brings money but also problems like pollution and crowding and rising prices and some people think it is good and some people think it is bad and in 2024 there were a lot of tourists, maybe 1 billion or more, and the Middle East grew a lot and so did other places...

(six unrelated photos, no source)

A made-up slide.

Which of the five rules does this slide break? How would you fix it?

Storyboard: turn the slide into three clear slides. Sketch each one and write its single message.

Case	Description	Outcome	Comments
1	A 10-year-old boy with a history of asthma and a recent diagnosis of diabetes mellitus presented with a 2-week history of polyuria, polydipsia, and weight loss.	The patient was treated with insulin therapy and his symptoms improved.	The patient's condition was managed successfully with insulin therapy.
2	A 15-year-old girl with a history of diabetes mellitus presented with a 1-week history of nausea, vomiting, and abdominal pain.	The patient was treated with insulin therapy and her symptoms improved.	The patient's condition was managed successfully with insulin therapy.
3	A 20-year-old man with a history of diabetes mellitus presented with a 3-week history of polyuria, polydipsia, and weight loss.	The patient was treated with insulin therapy and his symptoms improved.	The patient's condition was managed successfully with insulin therapy.
4	A 25-year-old woman with a history of diabetes mellitus presented with a 4-week history of polyuria, polydipsia, and weight loss.	The patient was treated with insulin therapy and her symptoms improved.	The patient's condition was managed successfully with insulin therapy.
5	A 30-year-old man with a history of diabetes mellitus presented with a 5-week history of polyuria, polydipsia, and weight loss.	The patient was treated with insulin therapy and his symptoms improved.	The patient's condition was managed successfully with insulin therapy.
6	A 35-year-old woman with a history of diabetes mellitus presented with a 6-week history of polyuria, polydipsia, and weight loss.	The patient was treated with insulin therapy and her symptoms improved.	The patient's condition was managed successfully with insulin therapy.
7	A 40-year-old man with a history of diabetes mellitus presented with a 7-week history of polyuria, polydipsia, and weight loss.	The patient was treated with insulin therapy and his symptoms improved.	The patient's condition was managed successfully with insulin therapy.
8	A 45-year-old woman with a history of diabetes mellitus presented with a 8-week history of polyuria, polydipsia, and weight loss.	The patient was treated with insulin therapy and her symptoms improved.	The patient's condition was managed successfully with insulin therapy.
9	A 50-year-old man with a history of diabetes mellitus presented with a 9-week history of polyuria, polydipsia, and weight loss.	The patient was treated with insulin therapy and his symptoms improved.	The patient's condition was managed successfully with insulin therapy.
10	A 55-year-old woman with a history of diabetes mellitus presented with a 10-week history of polyuria, polydipsia, and weight loss.	The patient was treated with insulin therapy and her symptoms improved.	The patient's condition was managed successfully with insulin therapy.

slide 1 message

[illegible]

slide 2 message

Circumstance	Percentage of respondents (%)
(a) self-defense	~95
(b) defense of others	~85
(c) defense of property	~80
(d) defense of a business	~75
(e) defense of a country	~65

slide 3 message

5

Many places now ask visitors to travel more responsibly: to visit outside the busiest times, use public transport, spend money with local businesses and respect local customs. Bhutan, for example, charges most international visitors a daily Sustainable Development Fee, which it says helps protect its environment and culture.

Informative

Visitors to the old town are highest on Saturdays between 11 am and 3 pm. Weekday mornings are usually quieter.

Beat the crowds and see the real old town! Come on a weekday morning and enjoy the streets the way locals do.

Think and note

Is a persuasive message less honest than an informative one? Note your view and one reason.

Travelling in ways that respect local people, cultures and environments.

Trying to make someone believe
or do something.

On your own. Choose one change you would like visitors to your area to make.

The change:

Informative message

Persuasive message

Test both on three classmates. Which would change their behaviour? Which did they trust more? Why might those be different?

6 The mission

Tourism looks different depending on where you stand. Help a real audience see more of the picture.

Mission brief. Prepare a four-minute talk or podcast: *Is tourism good for our area?* Choose a real audience. Include at least three perspectives and one clear visual or sound clip with a source. End with a recommendation, then answer questions from the audience.

1 Plan for your audience

Audience:

What they already know:

What they care about:

Our purpose:

The one thing they must remember:

Format:

Tone:

2 Plan the talk

Hook (first 20 seconds):

Perspective 1:

Perspective 2:

Perspective 3:

Our visual or clip, and its source:

Recommendation:

Final line:

3 Get ready for questions

Predict the four hardest questions your audience could ask. Plan an honest answer. If you don't know, say so, and say how you could find out.

Question we expect	Our answer	Who answers

Task 7 Audience feedback

Communication Evaluation

Team	Suited the audience	Clear message	Listened to questions	The line I remember

Score 1–4 in each column.

Think and note

After your talk: what would you change if you gave it again tomorrow?

7 Look back

Every message you send lands with a real person. Good communicators keep checking whether it landed the way they meant.

[illegible]

On page 97 you wrote about who gains and who loses from visitors. What would you add now?

Check your progress

I can...	Not yet	Getting there	Confident
I can shape information for a specific audience and purpose. <i>Communication</i>	☐	☐	☐
I can present information clearly, with sources, in different formats. <i>Communication</i>	☐	☐	☐
I can listen actively and respond to others' ideas in discussion. <i>Communication</i>	☐	☐	☐
I can choose visuals that make a message clearer. <i>Communication</i>	☐	☐	☐
I can tell informative and persuasive messages apart and explain the techniques. <i>Evaluation</i>	☐	☐	☐
I can explain the benefits and costs of tourism at three levels. <i>Analysis</i>	☐	☐	☐

Quick quiz

Answer from memory first. Then check the pages.

1. What four questions should you ask before you communicate?
2. Name three moves you can use in a discussion.
3. Give two rules for good slides.
4. What is the difference between an informative and a persuasive message?
5. Give one benefit and one cost of tourism.

Adapt your message

The same information must sound different for different audiences, without losing accuracy. This is a key communication skill.

What makes a top answer

	Developing	Secure	Excellent
Audience	Same words for both.	Language suits each audience.	Language, examples and tone are precisely chosen for each.
Clarity	Several ideas, unclear focus.	One clear main message.	A memorable main message with a strong hook.
Accuracy	Facts missing or wrong.	Accurate facts with a source.	Accurate, sourced facts, simplified without distortion.

Task ★

Practise it

Communication

Write the first 60 seconds of a talk about tourism in your area: version A for Year 6 students, version B for your city council.

Tip

Before writing, answer the four questions on page 102.

My level and why:

To reach the next level I will:

Inside the lens: homes and savings of very different sizes. The gaps between them are the subject of this unit.

You will build a reflective exhibition with your class: your own journey of thinking about poverty and inequality, plus one fair, practical idea for your school or community.

- see how definitions change what we count as poverty
- explore inequality between and within countries
- notice your own assumptions, and question them
- use respectful language about people and places
- weigh up ideas that help people out of poverty
- explain clearly how your perspective has changed

Before you start: what do you think causes poverty? Write your honest first answer. Nobody else needs to see it.

Researchers at Our World in Data pointed out that the world had not become poorer. A higher line means more people are counted, even though their lives are the same. And the long-term story is still striking: under the new line, around 1.5 billion people left extreme poverty between 1990 and 2022.

An exact statement of what a word or measure means.
Changing it changes what gets counted.

ourworldindata.org → new
international poverty line

What does this case teach you about reading any headline that contains a big number?

How the line has moved

The World Bank's international poverty line, per person per day, in the year each line was set

Sources: World Bank (2025), June 2025 update to global poverty lines; ONE Campaign (2025). Each line uses prices from a different base year, so the dollar amounts are not directly comparable.

Task 1

First thoughts, second thoughts

Reflection

Analysis

1. In your own words, why did the number of people in extreme poverty rise in June 2025?

2. Someone living on \$3.01 a day is not counted as extremely poor. What does that tell you about any single line?

3. Look at your answer from page 117. Has anything here made you think differently? Write 'not yet' if not. That is a fine answer.

Omar

So the headline could be 'Poverty rises by 125 million' or 'World measures poverty more fairly'. Same facts. Very different story.

1 What is poverty?

Poverty is not only about money. It is about what people can and cannot do with their lives.

Absolute poverty means not having enough for basic needs: food, clean water, shelter, health care. The international poverty line measures this.

Relative poverty means having much less than most people around you, so that you cannot take part in normal life in your society. A family can be relatively poor in a rich country even if they would not be counted as extremely poor worldwide.

Many organisations also measure poverty in several **dimensions** at once, such as health, education and living standards. A family might have some income but no school nearby, no clean water and no electricity.

The first of the United Nations Sustainable Development Goals is to end poverty in all its forms everywhere. Goal 10 is to reduce inequality within and between countries.

absolute poverty

Not having enough for basic human needs.

relative poverty

Having much less than most people in your society, so you cannot take part fully.

inequality

Unfair or large differences between people or groups, for example in income, health or opportunities.

Think and note

Which kind of poverty seems most important to understand in your area? Why?

What does a good life need?

Collaboration

On your own first, then in your team. You do not need to share anything about your own home.

A fair job for adults

Your own idea:

Essential for everyone:

Important, but not essential:

Depends on where you live:

Compare with your team. Where did you disagree? What made each of you decide the way you did?

I put 'internet' in essentials. Amara said her grandmother lives well without it. We were both right, for different places.

2 Mind the gaps

Inequality is about the distance between people. It shows up in money, but also in health, education and opportunities.

Between countries

Average incomes in the richest countries are many times higher than in the poorest.

Within countries

A city can have very rich and very poor neighbourhoods side by side.

Between groups

Gender, disability, ethnicity or being from a rural area can affect people's chances.

Across generations

Children who grow up poor often face more barriers as adults, unless something breaks the cycle.

Research groups estimate that nearly half of the world's people live on less than \$8.30 a day. At the same time, a small share of people hold a large share of the world's wealth.

The Gapminder Foundation's **Dollar Street** project photographed hundreds of homes around the world and arranged them by income instead of by country. Looking at the photos, many people are surprised: families on similar incomes often live in similar ways, whatever their country. Income can tell you more about someone's daily life than their nationality.

opportunity

A real chance to do or become something.

Mateo

On Dollar Street, a family in Colombia and a family in Ukraine on the same income had almost the same kitchen.

Think and note

Where have you noticed a gap in opportunities, near you or far away?

Task 3

Reflection

⚖

Evaluation

People explain poverty in different ways. Score how much you agree with each explanation now (1 = not at all, 5 = completely). You will score them again at the end of the unit.

View	Explanation	Now	End
Choices	People are poor mainly because of the choices they make.		
Circumstances	People are poor mainly because of where and to whom they were born.		
Systems	People are poor mainly because of unfair rules, history and the way economies work.		
Shocks	People become poor mainly because of illness, conflict, disasters or losing a job.		

Reflective journal, entry 1: Which view is closest to yours? Where do you think your view comes from: family, news, experience, school, social media?

3 Stories and statistics

How we talk about poverty shapes how we think about people. Words can respect people, or reduce them to a label.

A **stereotype** is a fixed, over-simple idea about a group of people.

Stereotypes about poverty are common: that people in poverty are lazy, or that whole continents are poor. Statistics alone can also hide real people behind numbers.

A single story is never the whole story. One photo of hardship can make people forget that the same country also has doctors, artists, engineers and students like you. Respectful researchers look for many stories, and for the voices of the people they are describing.

Language swaps

the poor	→	people living in poverty
poor countries are...	→	people in lower-income countries often face...
they don't try	→	what barriers might they face?
Africa is poor	→	which country, which region, which people, which data?

stereotype

A fixed, over-simple idea about a group of people.

stigma

Shame or disapproval that a society attaches to a group or situation.

assumption

Something you accept as true
without checking it.

Think and note

Find one example of respectful reporting about poverty. What made it respectful?

Catch an assumption

Reflection

On your own. Be honest; this is for you.

An assumption about poverty or wealth I have heard (or held):

Where it might come from:

Evidence that challenges it:

What I think now:

 **Talk it through**

1. Why might a charity advert show only the hardest parts of people's lives? What could go wrong?
2. How would you want your own town to be described by someone who had never visited?

If anything in this unit feels close to home, you can talk to a teacher or another adult you trust.

4 Ladders out

No single idea ends poverty. But some ladders are well tested, and people disagree about which matter most.

Education

School, especially for girls, is linked to higher incomes and better health later.

Health

Vaccines, clean water and clinics stop illness from pushing families into poverty.

Work and fair pay

Decent jobs and fair wages let families plan ahead.

Cash support

Many governments give regular small payments to families with the least. Researchers have studied these programmes in many countries.

Infrastructure

Roads, electricity and internet connect people to markets, schools and services.

Fair rules

Laws on land, inheritance and discrimination decide who can build a better life.

World Bank researchers warn that progress against extreme poverty has slowed in recent years, especially where conflict and climate disasters hit hardest. That makes the question of what works more urgent, and more debated.

cycle of poverty

When poverty makes it harder to escape poverty, so it continues from one generation to the next.

Think and note

Which ladder do you think matters most? What evidence would change your mind?

Which ladder first?

Reflection

In your team. Imagine a town where many families cannot afford school costs.

Ladder	How it would help here	What it would need	Rank
Education			
Health			
Work and fair pay			
Cash support			
Infrastructure			
Fair rules			

Reflective journal, entry 2: Did anyone in your team change your mind? What did they say?

5 Closer to home

Inequality is not only something that happens far away. It can show up quietly in any school.

Even when school is free, being a student often costs money. Some students quietly miss out because of **hidden costs** such as:

- uniforms and shoes
- trips and events
- devices and internet at home
- stationery and calculators
- clubs, music lessons, sports kit
- transport to school

Many schools and communities look for fair solutions that protect people's dignity: uniform swaps, lending libraries for devices and calculators, trips paid for by a shared fund, free clubs. The best ideas let everyone take part without anyone having to explain why they need help.

Fair is not always equal

Equality means giving everyone the same. **Equity** means giving people what they need so they have the same chances. A ramp for a wheelchair user is not ‘extra’; it gives equal access.

equity

Fairness: giving people what they need so that everyone has a real chance.

dignity

Being treated with respect, as a person who matters.

Amara

Our school had a 'pay for your own trip' rule. Nobody said anything, but some people were always 'ill' on trip days.

Think and note

What could a school do to make sure no student misses out because of cost?

In your team. Choose one hidden cost at your school or in your community.

The hidden cost:

Who might it affect, and how?

Our idea:

How it protects dignity:

What it would need (people, money, time):

Who we would need to persuade:

A possible problem, and our answer:

Omar

Our first idea was a list of students who need help. Yuna asked how we'd feel being on that list. We changed it to a swap shop everyone uses.

6 The mission

Reflection is how learning becomes yours. This exhibition shows how your thinking has travelled, and what you would do about it.

Mission brief. Each person makes one reflective panel (A3 or digital) about their journey through this unit. Each team adds one panel presenting its fair-shares idea. The class holds an exhibition and visitors leave feedback.

Plan your reflective panel

1 What I thought at the start:

2 Something I learned that surprised me:

3 Evidence or a voice that changed my mind:

4 What I think now:

5 A question I still have:

6 What I will do differently:

Make it honest, specific and visual

- Quote your own journal entries from pages 123 and 127.
- Name the evidence that changed your thinking, with its source.
- Use one image, chart or object that sums up your journey.
- Use respectful language (page 124).

Task 7 Gallery walk feedback

Communication Reflection

Visit four panels. For each, leave a specific, kind comment and a question.

Panel by	What made me think	My question for them

Feedback I received that I want to remember:

7 Look back

Changing your mind because of evidence is not weakness. It is what thinking people do.

Task 8 Then and now

Reflection

Go back to your scores on page 123 and fill in the 'End' column. Then write your final journal entry.

Which scores changed most, and why?

Was it research, discussion, or both?

A local or global example that mattered to me

What I will notice now that I did not before

On page 117 you wrote what you thought causes poverty. Read it again. What would you say now?

Check your progress

I can...	Not yet	Getting there	Confident
I can explain how my perspective on an issue has changed, and why. <i>Reflection</i>	☐	☐	☐
I can identify my own assumptions and where they come from. <i>Reflection</i>	☐	☐	☐
I can relate what I learned to my own experience and to local and global examples. <i>Reflection</i>	☐	☐	☐
I can explain the difference between absolute and relative poverty. <i>Analysis</i>	☐	☐	☐
I can evaluate ideas for reducing poverty and inequality. <i>Evaluation</i>	☐	☐	☐
I can use respectful, accurate language about people and places. <i>Communication</i>	☐	☐	☐

Quick quiz

Answer from memory first. Then check the pages.

1. Why did the number of people in extreme poverty rise in June 2025?
2. What is the difference between equality and equity?
3. Name three hidden costs of going to school.
4. What is a stereotype? Why can it be harmful?
5. Name two 'ladders' out of poverty.

Explain how your perspective changed

At Stage 9 you need to explain how your perspective on an issue has changed as a result of research and exploring other perspectives.

What makes a top answer

	Developing	Secure	Excellent
Before and after	Only the current view.	Clear before and after views.	Clear before and after views, with how big the change was.
What changed it	No cause given.	Names research or discussion.	Names specific evidence, sources or voices and explains their effect.
Depth	General statements.	Personal and local or global links.	Personal, local and global links, and questions you still have.

Task ★

Practise it

Reflection

How has your perspective on poverty and inequality changed during this unit? Refer to specific research and discussion.

Tip

If your view did not change, explain what evidence made you surer. That counts too.

My level and why:

To reach the next level I will:

Inside the lens: notes, sources, data and a closer look.
Everything you have practised, in one piece of work.

This time the mission is yours alone. You will choose a global issue, research it from different perspectives, and write your own research report.

- learn what makes a strong research report
- turn a topic into a focused research question
- plan your research, including primary research
- record, organise and analyse what you find
- evaluate sources and weigh up perspectives
- write, check and reflect on your report

Look back over Units 1 to 6. Which skill has improved most? Which one do you most want to improve now?

The extract on the next page is a model written for this book. The numbers in it are made up. Read it slowly, then read the notes around it. Each note shows a skill you have practised in this book.

Combining information from different sources to build one clear picture.

My first question was 'Is plastic bad?' My teacher asked: what would you actually find out? It took three tries to get it right.

What do you notice about how Yuna's report is built?

Model extract, with notes

In my survey, 26 of 40 students (65%) said they bring at least one plastic item for lunch every day. The canteen manager told me the school uses about 300 plastic cutlery sets each week (interview, 12 March).

A city council report argues that a ban on single-use plastic in schools would be the fastest solution (City Environment Office, 2025). However, the report does not explain how schools would pay for reusable items, and it was written to support a new policy, so it may present only its benefits.

On the other hand, a global study found that bans work best when people are also given cheap alternatives (UN Environment Programme, 2023). Taking these perspectives together, I think a ban alone would not work in my school. A better first step would be...

Primary research

own data, with numbers and
where they came from

Evaluation

questions the author's purpose
and what is missing

Perspectives

local and global views set side
by side

Synthesis and judgement

combines sources and reaches
her own conclusion

References

every source is named, so it can be checked

Model text written for this book. The survey, interview, council report and figures are made up: the UNEP study is described in general terms for the model only.

Task 1

Read like an examiner

Evaluation

Reflection

1. Find one sentence that uses evidence and one that gives Yuna's own judgement.
2. What does Yuna do when a source might be one-sided?
3. Suggest one way she could make this extract even stronger.

1 What makes a strong report

At the end of Stage 9, you may write an individual research report. Your teacher will give you the exact requirements. These are the building blocks of any strong report.

- 1 A focused question:** about a real global issue, with personal, local and global angles
- 2 Different perspectives:** explained fairly, with the reasons and evidence behind them
- 3 Secondary research:** from a range of sources, evaluated and referenced
- 4 Primary research:** your own survey, interview or observation, with a method you can justify
- 5 Analysis:** patterns, causes and consequences, not just facts
- 6 A conclusion:** that answers the question and follows from the evidence
- 7 A course of action:** a realistic suggestion for what could be done
- 8 Reflection:** how your perspective changed, and what you learned about researching
- 9 References:** a complete bibliography

course of action

A realistic step that could be taken to improve the situation.

academic honesty

Doing your own work and always showing where ideas and information came from.

Where you practised it

Questions and sources: Unit 1
Arguments: Unit 2
Data and surveys: Unit 3
Teamwork: Unit 4
Presenting: Unit 5
Reflection: Unit 6

Think and note

Which building block will be hardest for you? What will you do about it?

Task 2 Where am I starting from?

Reflection

Rate yourself on each building block from page 140: 1 = not confident, 4 = very confident. Circle your two weakest.

1	2	3	4	5	6	7	8	9

My two targets:

How I will work on them:

A six-week plan

Your teacher may give you different dates. Fill in your own.

	Goal	My dates	Done
Week 1	Choose your issue and question		
Week 2	Plan; start secondary research		
Week 3	Primary research		
Week 4	Record and analyse		
Week 5	Draft the report		
Week 6	Check, improve, reflect, submit		

Mateo

I planned to do all my reading in week 5. Bad idea. Spread it out.

7

2 From issue to question

A topic is too big to research. Narrow it step by step until you reach a question you can really answer.

Remember the five tests

From Unit 1: a strong question is **focused, needs investigation, needs judgement, is answerable** in the time you have, and **matters to someone**.

For a report, add one more: can you look at it from **personal, local and global** perspectives?

issue

An important problem or subject that people discuss and disagree about.

Think and note

Write three topics you care about. Circle the one with the best issue inside it.

Task 3 Build your question

 Research

On your own. Then ask a partner to test it against the six tests.

Topic:

Issue:

Angle:

Place or group:

Draft question:

Test	Me	Partner
Focused		
Needs investigation		
Needs judgement		
Answerable		
Matters to someone		
Personal, local and global angles		

Improved question:

Who would want the answer?

3 Plan your research

Good research starts with knowing what you need to find out, and where you might find it.

Break your question into smaller **sub-questions**. Each one should help you answer the main question. For each sub-question, decide whether you need secondary sources, primary research, or both.

Example. Main question: How does phone use at night affect sleep for students in my city, and what would help?

1. What do experts say about screens and sleep? (secondary: health organisations, research summaries)
2. How do students in my school use phones at night? (primary: anonymous survey)
3. What do parents and teachers think? (primary: two short interviews)
4. What have other places tried? (secondary: news, school policies abroad)

sub-question

A smaller question that helps to answer a bigger one.

consent

Permission given by someone after they understand what they are agreeing to.

Research safely and fairly

- Ask your teacher before contacting anyone outside school.
- Explain your purpose and get permission before an interview.
- Keep survey answers anonymous and private.
- Never share personal information online.

Think and note

Who could you interview for your report? Who would give a different perspective?

My research plan

Main question:

Sub-question	Secondary sources to try	Primary research	By when

Which perspective will be hardest to find? How will you find it?

Omar

I wanted a global perspective, so I emailed a student at our partner school abroad. My teacher helped me set it up.

4 Primary research

Your own research adds something no website can: evidence about your place and your people.

Method	Strengths	Limits
Survey	Many people, same questions. Good for patterns and numbers.	Answers can be short; question wording matters.
Interview	One person, in depth. Good for reasons, feelings and expert knowledge.	Takes time; one view is not everyone's view.
Observation	Watch and record what really happens, such as counting plastic in a canteen.	You see what, but not why.
Small experiment	Change one thing and measure the effect.	Hard to control everything; small samples.

Justify your method

In your report, explain **why** you chose your method. For example: *I used a survey because I wanted to compare many students' habits, and an interview because I needed to understand the canteen's costs.*

Also explain its limits honestly. A survey of 40 students in one school cannot tell you about a whole country, but it can tell you a lot about your school.

method

The way you collect information.

limitation

A weakness in your research that affects how far you can trust or apply the results.

Think and note

Which primary method fits your question best? Why?

My method:

Why this method suits my question:

Its main limitation:

Write up to six questions for your survey or interview. Use the advice from Unit 3 (page 66).

1

2

3

4

5

6

Pilot your questions with one person. What did you change, and why?

5 Record and analyse

Information is only useful if you can find it again and make sense of it.

Record as you go

- Use one **source card** per source (Unit 1, page 27).
- Put survey answers into a **table** as soon as they come in.
- Write interview notes the same day, while you remember.
- Keep a simple **research diary**: what you did, what you found, what to do next.

From data to analysis

1. **Describe:** what does the data show? Use numbers.
2. **Compare:** are there differences between groups?
3. **Explain:** what could cause the pattern?
4. **Connect:** what are the consequences, personal, local and global?
5. **Question:** what can the data not tell you?

research diary

A short record of what you did,
found and decided during
research.

Amara

My diary saved me. I forgot where a statistic came from, and there it was, with the link.

Think and note

Set up your research diary: today's date, what you did, what you found, what next.

Analysis

Answer	Students	Percentage
Under 30 minutes	4	
30 to 60 minutes	11	
1 to 2 hours	15	
More than 2 hours	10	

7

6 Perspectives and arguments

A report is not a list of facts. It shows that people see the issue differently, and why.

For each perspective, explain **who** holds it, **what** they claim, **why**, and **how strong** the evidence is. Then compare the perspectives. Where do they agree? Where do they clash? Which is best supported?

Useful sentence starters

From a personal perspective, ...

Some people in my community argue that ... because ...

At a global level, organisations such as ... suggest that ...

This source is credible because ... / may be biased because ...

Both views agree that but they disagree about ...

Taking the evidence together, I think ... because ...

credible

Able to be believed and trusted.

Yuna

I wrote my conclusion first, then found I had to change it. The evidence didn't agree with me. That was the most honest part of my report.

Think and note

Write one sentence for each level: personal, local and global.

Task 7

Perspectives grid

Analysis

Evaluation

Level	Who, and what they claim	Their reasons and evidence	How strong? (1–5)
Personal			
Local			
Local (another view)			
Global			

Where they agree:

Where they clash:

Best supported, and why:

Task 8

Course of action

Analysis

Communication

What should happen:

Who should do it:

Evidence it could work:

A possible problem:

How to deal with it:

7 Write it

Now bring everything together. Write clearly, for a reader who knows nothing about your research.

A clear structure

Title and question	Make your question the centre of the report.
Introduction	Why the issue matters; personal, local and global.
Method	What research you did, and why.
Findings and analysis	Evidence from all your research, with charts if they help.
Perspectives and evaluation	Different views, judged fairly.
Conclusion	Your answer to the question.
Course of action	What could be done next.
Reflection	How your perspective and your skills changed.
References	Every source, in a consistent style.

draft

An early version of a piece of writing, to be checked and improved.

Academic honesty

Use your own words. Put any quotation in quotation marks and reference it. If you use a tool to help you, check your teacher's rules and be open about it.

Think and note

Write the first sentence of your introduction.

Task 9

Final check

Reflection

Communication

Before I hand it in

Me

A partner

My question is clear and focused.

9

9

I include personal, local and global perspectives.

9

9

I use secondary and primary research.

9

9

I evaluate my sources, not just use them.

9

My analysis explains patterns, causes and consequences.

9

4

My conclusion answers my question and follows from my evidence.

9

9

I suggest a realistic course of action.

4

4

I reflect on how my perspective changed.

4

9

Every source is referenced.

4

9

I have checked spelling, clarity and length.

4

9

The one thing I improved most after checking:

8 Look back

This is the end of the book, but not the end of your research. These skills will travel with you.

Task 10 My year in Global Perspectives

Reflection

The skill I improved most, with an example

A perspective that changed for me this year

What I learned about working with others

What I will do differently in my next research

7

Amara

I learned to slow down. My ideas are better when the team has tested them.

Omar

I learned to offer, not wait to be asked.

Check your progress

I can...	Not yet	Getting there	Confident
I can turn a topic into a focused research question with personal, local and global angles. Research	☐	☐	☐
I can plan research and justify the methods I choose. Research	☐	☐	☐
I can record and organise information from many sources. Research	☐	☐	☐
I can analyse data and explain patterns, causes and consequences. Analysis	☐	☐	☐
I can evaluate sources and perspectives and reach my own judgement. Evaluation	☐	☐	☐
I can write a clear, honest and well-referenced report. Communication	☐	☐	☐
I can reflect on how my perspective and my skills have changed. Reflection	☐	☐	☐

Quick quiz

Answer from memory first. Then check the pages.

1. What is the difference between primary and secondary research?
2. Why should you justify your research method?
3. What are the five steps from data to analysis?
4. What is a course of action?
5. Name three parts of a strong research report.

Mark your own report

Use this rubric on your draft. Highlight the description that matches your work in each row. Then improve the rows that are lowest. Your teacher will tell you the exact requirements for your assessment.

	Developing	Secure	Excellent
Question	Topic, not a question.	Focused question.	Focused question with personal, local and global angles.
Perspectives	One view.	Two or three views explained.	Several views explained fairly and compared.
Research	A few similar sources.	A range of secondary sources plus primary research.	A wide range, with primary research and a justified method.
Evaluation	Sources used without comment.	Some sources evaluated.	Key sources evaluated; reliability affects conclusions.
Analysis	Facts listed.	Some causes and consequences.	Clear patterns, causes and consequences, linked to evidence.
Conclusion and action	Missing or unsupported.	Answers the question; an action is suggested.	Follows from the evidence; a realistic, justified action.
Reflection	Brief or missing.	Says how perspective changed.	Explains how and why perspective and skills changed.
References	Few or incomplete.	Most sources referenced.	Every source referenced consistently.

My strongest row:

My weakest row:

Three changes I will make:

Look closer. Think wider.

You have asked better questions, tested sources, read data, worked as a team and changed your mind for good reasons. Keep doing it. The world needs people who can.

Mateo

See you in the next book.

Command words

The first word of a task tells you what kind of thinking to do. Many lost marks come from describing when the task said explain, or explaining when it said evaluate.

Word	What it asks you to do	Start like this
Identify	Find or name something.	<i>One reason is...</i>
Describe	Say what something is like or what happens. No reasons needed.	<i>The chart shows that...</i>
Explain	Give reasons why or how.	<i>This happens because... This means that...</i>
Compare	Show similarities and differences.	<i>Both..., but... whereas...</i>
Analyse	Break down information to find patterns, causes and consequences.	<i>One cause is..., which leads to...</i>
Evaluate	Judge how strong, useful or reliable something is, with reasons.	<i>This source is credible because..., however...</i>
Justify	Give strong reasons for a decision or conclusion.	<i>I chose this because the evidence shows...</i>
Suggest	Put forward an idea or a possible answer.	<i>One possible solution would be...</i>
Reflect	Think about your learning, your work or your views, and how they changed.	<i>At first I thought..., but now...</i>

Yuna

I underline the command word before I start. It stops me writing a lovely answer to the wrong question.

P	E	E	J
Point	Evidence	Explain	Judge
Make one clear claim.	Support it with facts, data or an example, with the source.	Show how the evidence proves the point.	Say how strong it is, or what it means for the question.

Tourism is bad for cities. There are too many tourists everywhere and it is annoying for people. Venice has lots of tourists.

Tourism can push local residents out of popular cities. In Venice, reports in 2022 said the historic centre had fewer than 50,000 residents, as many homes became holiday rentals. This suggests that when renting to visitors earns more, homes are lost for local families. However, this is one city, so it may not apply everywhere; we would need data from other cities to be sure.

 Communication

What a strong research looks like

- ## Steps

- ## Sentence starters

Watch out for

- Practised most in:** Unit 1, Unit 7

What a strong analysis looks like

- ## Steps

- ## Sentence starters

From a local perspective...

Watch out for

- Practised most in:** Unit 3. Unit 7

My notes on analysis

Evaluation

Judging how far sources, arguments and perspectives can be trusted.

What a strong evaluation looks like

- You use clear checks: who, why, one-sided, agreement, date.
- You weigh the strengths and weaknesses of arguments.
- You notice bias and missing evidence.
- Your judgements are justified and careful.

Steps

1. Identify the claim and its evidence.
2. Check the source.
3. Look for what is missing.
4. Compare with other sources.
5. Make a justified judgement.

Sentence starters

This source is credible because...

However, it may be biased because...

This argument is weakened by...

Overall, the stronger evidence is...

Watch out for

- Trusting a source because it looks professional.
- Rejecting a source just because you disagree.
- Judgements with no reasons.

Practised most in: Unit 1. Unit 2

My notes on evaluation

What a strong reflection looks like

- ## Steps

- ## Sentence starters

Watch out for

- Practised most in:** Unit 4. Unit 6

My notes on reflection

Collaboration

Working positively with others to reach a shared outcome.

What a strong collaboration looks like

- You contribute ideas and do your share on time.
- You support and encourage others to take part.
- You help the team agree roles and change them when needed.
- You handle disagreement constructively.

Steps

1. Agree the goal and the rules.
2. Share out roles with reasons.
3. Make an action plan.
4. Check progress halfway.
5. Adjust and finish together.

Sentence starters

Could we hear from... first?

I can take... because...

Let's check our plan against...

I disagree, because... What do you think?

Watch out for

- Doing everything yourself, or nothing.
- Letting one voice decide.
- Ignoring problems until the deadline.

Practised most in: Unit 1. Unit 4

My notes on collaboration

Sharing information and arguments clearly, and listening and responding well.

What a strong communication looks like

- You shape your message for the audience and purpose.
- Your structure is clear and your sources are shown.
- You listen actively and respond to others' ideas.
- You answer questions honestly and confidently.

Steps

1. Know your audience and purpose.
2. Find your one key message.
3. Plan a clear structure.
4. Choose helpful visuals.
5. Rehearse and invite questions.

Sentence starters

The main thing I want you to remember is...

The evidence for this comes from...

So you're saying that...

That's a good question; we found...

Watch out for

- Too much text on slides.
- Reading aloud word for word.
- Talking over others or not responding to them.

Practised most in: Unit 5, Unit 2

My notes on communication

Glossary

absolute poverty

Not having enough for basic human needs.

academic honesty

Doing your own work and always showing where ideas and information came from.

active listening

Listening carefully, checking understanding and responding to what the speaker said.

adapted sport

A sport with changed rules or equipment so more people can take part.

antibiotic

A medicine that kills bacteria or stops them growing. It does not work on viruses.

argument

A claim supported by reasons and evidence.

assumption

Something you accept as true without checking it.

audience

The people a message is for.

barrier

Something that stops or limits a person from doing something.

bias

Leaning towards one side, often by leaving out information that does not fit.

bibliography

A list of all the sources used in a piece of work, usually in alphabetical order.

cholera

A disease caused by bacteria that spreads through dirty water and food. It causes severe diarrhoea and can kill quickly if untreated.

claim

A statement that someone says is true and wants you to accept.

collaboration

Working together with others to reach a shared goal.

communicable

Able to spread from person to person (or from animals or the environment to people). Also called infectious.

community

A group of people who live in the same place or share interests.

consent

Permission given by someone after they understand what they are agreeing to.

consequence

Something that happens as a result of an action or event.

correlation

A link between two things that change together. It does not prove one causes the other.

corroborate

To support a claim with evidence from another, independent source.

course of action

A realistic step that could be taken to improve the situation.

credibility

How far a source can be believed and trusted.

credible

Able to be believed and trusted.

crime

An action that breaks a law and can be punished by the state.

crime prevention

Actions taken to stop crimes before they happen.

cyberbullying

Bullying that uses digital technology, such as messages, posts or images.

cycle of poverty

When poverty makes it harder to escape poverty, so it continues from one generation to the next.

definition

An exact statement of what a word or measure means. Changing it changes what gets counted.

dialect

A form of a language used in a particular area or by a particular group.

digital footprint

The record of everything you do online, which can last for a long time.

dignity

Being treated with respect, as a person who matters.

disability

A long-term condition that, together with barriers in society, can limit a person's full and equal participation.

draft

An early version of a piece of writing, to be checked and improved.

epidemiology

The study of how diseases spread through groups of people, and how to control them.

equity

Fairness: giving people what they need so that everyone has a real chance.

eradication

Removing a disease from the whole world, permanently.

evidence

Information that helps to show whether a claim is true or false.

extreme poverty

Living below the international poverty line, without enough for basic needs such as food, shelter and health care.

format

The form a message takes, such as a talk, poster, video or report.

home language

The language a person mainly uses with their family.

identity

The qualities, beliefs and connections that make a person or group who they are.

idiom

A phrase whose meaning is different from the meaning of its separate words, such as 'break the ice'.

inclusion

Making sure everyone can take part, by changing things that shut people out.

inequality

Unfair or large differences between people or groups, for example in income, health or opportunities.

infectious disease

A disease caused by a pathogen getting into the body. Many, but not all, can spread between people.

international tourist arrival

One visitor arriving in a country for a trip. One person on three trips counts three times.

issue

An important problem or subject that people discuss and disagree about.

jury

A group of ordinary citizens who listen to the evidence in a trial and decide on the verdict.

law

A rule made by a government that applies to everyone and can be enforced by courts.

limitation

A weakness in your research that affects how far you can trust or apply the results.

machine translation

Translation done automatically by computer software.

method

The way you collect information.

microorganism

A living thing too small to see without a microscope. Also called a microbe.

non-communicable disease

A disease that does not spread between people, such as diabetes.

non-verbal communication

Sharing meaning without words, for example through gesture or expression.

opportunity

A real chance to do or become something.

overtourism

When so many visitors come to a place that it harms the environment, local life or the visitors' own experience.

paralympic

From 'parallel' and 'Olympic': games that take place alongside the Olympics.

pathogen

A microorganism (or other agent) that causes disease.

perception

The way something is seen or understood by a person, which may differ from the facts.

perspective

A viewpoint on an issue, based on evidence and reasoning.

persuasive

Trying to make someone believe or do something.

phishing

Pretending to be a trusted sender to trick people into giving away information or money.

physical activity

Any movement of the body that uses energy, from walking to playing sport.

plagiarism

Presenting someone else's words or ideas as your own.

prediction

What you expect to find, written down before you collect data.

prevention

Action that stops a problem, such as a disease, from happening or spreading.

primary research

Collecting new information yourself, for example by survey, interview or observation.

primary source

First-hand evidence from the time or from the people involved.

provisional

Not yet final. Provisional figures can change when more checks are done.

public health issue

A health problem that affects a large part of a population, so the whole community needs to respond.

purpose

The reason a message is created, such as to inform or to persuade.

recreation

Things people do for enjoyment in their free time.

reference

The details of a source, so a reader can find it.

relative poverty

Having much less than most people in your society, so you cannot take part fully.

research diary

A short record of what you did, found and decided during research.

research question

The focused question a research project sets out to answer.

research report

A written account of an investigation: the question, the evidence, the analysis and the conclusion.

responsible tourism

Travelling in ways that respect local people, cultures and environments.

rights

Things every person is entitled to, such as safety, fairness and freedom of speech.

risk factor

Something that makes a problem, such as a disease, more likely.

rumour

A story that spreads from person to person without being checked.

sample

The group of people who answer your survey.

secondary source

A source that describes or explains other sources.

sign language

A complete language that uses hand shapes, movement and facial expression instead of sound.

stakeholder

A person or group affected by an issue or a decision.

statistics

Numbers collected to describe something, such as how many crimes are reported.

stereotype

A fixed, over-simple idea about a group of people.

stigma

Shame or disapproval that a society attaches to a group or situation.

sub-question

A smaller question that helps to answer a bigger one.

synthesis

Combining information from different sources to build one clear picture.

tone

The feeling a message gives, such as serious, friendly or urgent.

transmission

The way a pathogen passes from one place or person to another.

trend

The general direction in which data changes over time.

trial

A formal process in a court to decide whether someone is guilty of a crime.

vaccine

A substance that trains the immune system to recognise a pathogen, so the body is ready to fight it.

verdict

The decision at the end of a trial: guilty or not guilty.

visual aid

An image, chart, object or slide that helps an audience understand a message.

Sources and credits

The bibliography for each unit follows the reference recipes on page 26. Websites were accessed in October 2026. Sources marked as made up were written for a task; any resemblance to real products, people or publications is accidental. Charts, maps and illustrations are by Prime Books, drawn from the data cited.

Unit 2

Boas, F. (1911). *Handbook of American Indian Languages*. Smithsonian Institution.

Martin, L. (1986). 'Eskimo words for snow': a case study in the genesis and decay of an anthropological example. *American Anthropologist*, 88(2).

Pullum, G. K. (1991). *The Great Eskimo Vocabulary Hoax and Other Irreverent Essays*. University of Chicago Press.

NASA (1999). *Mars Climate Orbiter Mishap Investigation Board Phase I Report*.

UNESCO (2016). *If you don't understand, how can you learn?* Global Education Monitoring Report, Policy Paper 24.

UNESCO (2022). *UNESCO celebrates the International Decade of Indigenous Languages*. <https://www.idil2022-2032.org>

United Nations (n.d.). *International Day of Sign Languages*.

Arguments A and B on page 45 are made up for the task.

Unit 3

Guthold, R., Stevens, G. A., Riley, L. M. and Bull, F. C. (2020). Global trends in insufficient physical activity among adolescents. *The Lancet Child & Adolescent Health*, 4(1).

International Paralympic Committee (n.d.). *History of the Paralympic Movement*. <https://www.paralympic.org/ipc/history>

National Geographic (2024). *How the Paralympic movement evolved into a major sporting event*.

World Health Organization (2023). *Disability* (fact sheet).

World Health Organization (2020). *WHO guidelines on physical activity and sedentary behaviour*.

The practice survey data on page 67 is made up for the task.

Unit 4

United Nations Committee on the Rights of the Child (2019). *General comment No. 24 on children's rights in the child justice system*.

UNICEF (n.d.). *Cyberbullying: what is it and how to stop it*. <https://www.unicef.org/stories/how-to-stop-cyberbullying>

The missing trophy, the Riverside mural case and the messages on page 85 are made up for the tasks.

Unit 5

Lenzen, M. et al. (2018). The carbon footprint of global tourism. *Nature Climate Change*, 8.

UN Tourism (2025). *International tourism recovers pre-pandemic levels in 2024*. World Tourism Barometer, January 2025.

Tourism Council of Bhutan (n.d.). *Sustainable Development Fee*.

The four voices on page 99, the city examples on page 102 and the slide on page 107 are made up for the tasks.

Unit 6

World Bank (2025). *June 2025 update to global poverty lines* (fact sheet, 5 June 2025).

Our World in Data (2025). *\$3 a day: a new poverty line has shifted the World Bank's data on extreme poverty*. <https://ourworldindata.org/new-international-poverty-line-3-dollars-per-day>

ONE Campaign (2025). *Poverty's meteoric rise*.

Gapminder Foundation (n.d.). *Dollar Street*.

United Nations (2015). *Transforming our world: the 2030 Agenda for Sustainable Development* (Goals 1 and 10).

Unit 7

Cambridge University Press & Assessment (2022). *Cambridge Lower Secondary Global Perspectives Teacher Guide*, version 2.0.

The model extract on page 139, its sources and figures, and the practice data on page 149 are made up for the tasks.

PRIME SCHOOL PRESS

Global Perspectives

Year 9 · Prime School Press · Student Manual

Look closer. Think wider.

A full-year student's book for Stage 9 Global Perspectives. Seven units, one for each skill and a final research report, take you from microbes to mock trials, from tourism to fair shares. Every unit ends with a Level up page showing what a top answer looks like.

INSIDE THIS BOOK

- Seven units: Can disease be prevented? · Understanding each other · Sport for all? · Feeling safe · Is tourism good for everyone? · Fair shares? · Your research report
- A Skills toolkit: command words and every skill, step by step
- Level up pages: what a top answer looks like
- Real research: checklists, case files and evidence files throughout
