Art & Design, Year 2 · Student Manual · First edition, published 2026

© Prime School 2026. All rights reserved. No part of this publication may be reproduced, stored in a retrieval system or transmitted in any form or by any means without the prior written permission of Prime School, except that a school which has purchased this book may photocopy the pupil recording frames for use within that school only.

Editorial Board. The Prime Books Subject Series has been developed under the guidance of the Pedagogical Academic Group for each subject and coordinated by the Pedagogical Team of Prime School. This publication reflects our shared commitment to academic excellence, educational quality, professional integrity, and the continuous advancement of teaching and learning. We extend our sincere appreciation to the Pedagogical Department and the Content Creation Team of Prime School for their contributions and collaborative efforts in making this publication possible.

Illustration. Every picture in this book was made for this book. No artwork by another artist is reproduced in these pages: works of art are named and described for study, and the addresses beside the square codes lead to the museums that hold them. Original watercolour illustration © Prime School 2026.

Safety. The activities in this book are written for pupils aged six to seven working under the direct supervision of a teacher. Clay is fired by an adult only, and no activity needs a blade, a solvent or an aerosol. Teachers carry out their own risk assessment and follow their school's safety policy.

Web addresses. Every address in this book answered correctly when this edition went to press. Pages outside Prime School's control may move or close.

The paper. Printed on paper from responsibly managed forests. Interior 8.5 × 11 in on white stock. British English throughout.

ISBN 978-989-33-7413-9

WELCOME

Come into the studio

The studio, early on a bright morning. Look at the long table under the wide window, and at what each of the four is already busy with.

There is a room at the edge of a wood. It has one wide window, a floor of bare boards, and a long wooden table with marks all over it.

On the table there are jars of water, and brushes standing up in a pot, and a lump of grey clay under a damp cloth. Paintings lean against the wall, waiting to dry.

This book is about making things.

Four animals work in this studio. They push their fingers into clay. They look very hard at a beetle and draw it. They press ink onto paper and lift a print off. They mix two colours and find a third.

Sometimes what they make is not what they meant to make. That happens to every artist. They look at it, say what they like about it, and try again. You are going to do the same.

WELCOME

Four in the studio

Hodge the hedgehog

He is happiest with clay under his claws, and he never minds getting his apron dirty.

Willa the barn owl

She looks longer than anyone else before she starts, so her drawings are the closest to the truth.

Rufus the red fox

He tries things. Half of them go wrong, and he learns something from every one.

Bruno the bear

He is slow and careful with a brush, and he mixes the best colours of the four.

You will see all four of them again and again as you work through this book. Each one helps with the making they know best.

The parts of a page

Every topic in this book is built from the same few parts. Here is what each one looks like, so you know what to do when you see it.

🚩 WHAT HODGE NOTICED

One of the four sees something, and wonders about it.

Then the topic begins.

🕒 BY THE END YOU WILL

- ✓ know what this part of the book is for
- ✓ know what you will be able to do at the end

WARM
YOUR
HANDS
UP

A quick warm up for your hands and your eyes, before you make anything.

◆ IN THE STUDIO

A question to talk about before you start. There is no wrong answer here.

Looking, and having a go

● LET US LOOK CLOSELY

The teaching part. Read it with your teacher, and look carefully at the picture beside it.

■ WATCH ME TRY 1

How do I make a pot from one lump of clay?

- 1 Roll the clay into a ball between both palms.
- 2 Press one thumb down into the middle of the ball.
- 3 Turn the ball slowly, pinching the wall as you go.

We found out: pinching the wall while you turn makes an even pot

● YOUR TURN

- 1 Now you have a go. Your turn items are numbered like this one. Say what you are going to do before you start.

Working with other people

▣ WHAT YOU WILL NEED

a lump of clay and a wooden board, always listed beside the activity

! WORK SAFELY

Wipe the table and wash your hands when you have finished with clay.

○ DO YOU REMEMBER?

Something you already know, from a topic you have done before.

≡ MAKE IT TOGETHER

Something to make together, with a partner or in a group.

Asking, and finding out

→ GO A LITTLE FURTHER

A harder one, if you finish early.

□ HOW DO YOU KNOW?

This one asks you to say **why** you chose what you chose. It matters more than the answer.

✦ FROM WILLA'S OWN SKETCHBOOK

A surprising fact, from Willa's own sketchbook.

▲ STUDIO CHALLENGE

A puzzle for the whole group to argue about.

Looking back at what you did

At the end of every unit there are three things. First the words you have used, so you can check you know them.

brush

you paint with it

slab

a flat piece of clay

☐ CHECK WHAT YOU CAN DO

- 1 A question at the end of the unit.
- 2 If you can do these, you are ready for the next unit.

Then your own record of how it went. You fill this one in yourself, and nobody marks it.

LOOK WHAT I CAN DO!	CONFIDENT	ALMOST THERE	NEEDS MORE WORK
something you learnt in the unit	☐	☐	☐

And last, **Along the way**: something to make, using everything the unit taught you.

The square codes

There is one more thing you will meet in this book. A square code, like the one below.

Ask your teacher to hold a phone or a tablet up to it. It opens a museum, or a short film of somebody making something. The address is printed underneath, so you can find it on a computer instead.

A short film of somebody making a jug out of clay

for the class, on the board

vam.ac.uk, how was it made, a puzzle jug

Watch her hands. She is doing the same four things you will do in Unit 1: squeezing, rolling, joining and smoothing.

- ☐ I know what each part of a page is for.
- ☐ I know what to do when I see a square code.

SETTING UP

Setting up your studio

You do not need a special room to be an artist. You need a table you are allowed to make marks on, a jar of water, and somewhere to put wet work while it dries.

round brush

for lines and for filling in

flat brush

for washes and wide marks

pencil

for looking and for drawing

rubber

for changing your mind

water jar

for washing your brush

sponge

for lifting paint off again

clay tool

for shaping and for scoring

sketchbook

for keeping everything you try

Set your things out the same way every time. Then your hands know where to reach, and you can think about what you are making instead.

SETTING UP

Laying your things out

Four things, always in the same four places. Left to right: the apron, the wooden board, the folded cloth and the jar of clean water. Nothing else is on the table yet.

Four things go out before you start, every single time: an **apron**, a wooden **board**, a **cloth** and a **jar** of clean water.

❑ WHAT YOU WILL NEED

an apron, a wooden board, a cloth and a jar of clean water

! WORK SAFELY

Roll your sleeves up and put your apron on before you start. Wipe the table and wash your hands when you have finished.

SETTING UP

Looking after your tools

A brush that is looked after will last for years. A brush left standing in water is ruined in a day, because the hairs bend and never come straight again.

Three things to do with every brush, every time you finish.

1 Rinse

Rinse the brush in cool water until the water runs clear.

2 Shape

Squeeze the hairs gently to a point with your fingers.

3 Lay it down

Lay it flat, or stand it hairs UP in a pot.

Never stand a brush on its hairs, even for a minute, and never wash one in hot water. Both of those bend the hairs, and a bent brush will not come to a point again however carefully you treat it afterwards.

□ HOW DO YOU KNOW?

Look along the class brushes. Which ones still come to a point? How do you know which of those were the ones left standing in water?

SETTING UP

Looking after the clay

Clay is different. Clay only stays soft if it stays damp, so it lives wrapped in a wet cloth inside a bag. Left out on the table overnight it goes hard, pale and crumbly, and it cannot be used again.

1 Wrap

Wrap the clay in a damp cloth.

2 Press

Press all the air out of the bag.

3 Store

Keep it away from the window.

Putting the clay away so it is still soft tomorrow. Look at the cloth going round the lump before the bag closes, and at the flat bag beside it with the air pressed out.

The bag is the one that catches a class out. Air left inside it dries the clay from the middle, where nobody can see it happening, and no amount of water brings it back.

SETTING UP

Checking the class kit

≡ MAKE IT TOGETHER

Look at your class brushes. Sort them into two piles: brushes that still come to a point, and brushes that do not. Can you tell which pile was left standing in water?

□ WHAT YOU WILL NEED

the class brushes, and a jar of clean water

WORK SAFELY

Never leave a brush standing on its hairs, and never wash a brush in hot water.

/ FOR TEACHERS

These two pages are worth a full lesson before Unit 1 begins. Pupils who put their own tools away correctly from the first week produce better work all year, because their brushes still hold a point in Unit 4.

The clay bag is the one that catches classes out. Clay that has dried out cannot be softened again by adding water at this age: it goes lumpy. Check the bag is sealed at the end of every clay lesson.

UNIT 1 · THE CLAY BENCH

1

Sculpting with clay

Hodge has a lump of grey clay and both thumbs ready.
Come and get your hands dirty with him.

Clay is earth. While it is wet you can push it into any shape you like, and it remembers everything you press into it.

Picture 1.0 Look at Hodge's paws pressing down into the lump of grey clay, and at the long coil he has already rolled out on the bench beside him. Everything on that bench came out of one lump.

UNIT 1 - THE CLAY BENCH

Before you begin

▶ WHAT HODGE NOTICED

I pushed my thumb into the lump, and the hole stayed there. So I pushed a bit more, and now it is a little pot.

Hodge has found the oldest way of making a pot there is. People were making pots exactly like his thousands of years ago.

◎ BY THE END YOU WILL

- ✓ pinch, roll, flatten and join clay
- ✓ press a texture into clay and name what made it
- ✓ decorate a dry clay tile with paint and paper
- ✓ say what clay does as it dries

Four shapes from one lump. Look along the bench: a pinched pot with a thumb hollow in it, a rolled coil, a flattened slab and a ball. All four came out of the same piece of clay.

◆ IN THE STUDIO

Squeeze your empty hand into a fist, then open it. Now imagine there was clay in it. What shape would you have made?

UNIT 1 - TOPIC 1.1

Squeezing, rolling and joining clay

Rub your hands together hard until they feel warm. Warm hands make clay softer to work with.

● LET US LOOK CLOSELY

Clay is earth. It comes out of the ground wet, and while it is wet you can push it into any shape you like.

There are only a few things your hands need to know how to do. You can **pinch** it between finger and thumb. You can **roll** it into a sausage, which artists call a **coil**. You can flatten it into a **slab**. And you can **join** two pieces together.

Every clay pot in every museum in the world was made with those same few movements.

The five things your hands do. Pinch, roll, slab, join, smooth. You will use all five today.

■ WATCH ME TRY 1

How do I make a pot from one lump of clay?

- 1 Roll the clay into a ball between both palms.
- 2 Press one thumb down into the middle, but not out the other side.
- 3 Turn the ball slowly, pinching the wall between finger and thumb.

We found out: pinching while you turn makes the wall the same all the way round

□ HOW DO YOU KNOW?

Hodge says a thick wall is stronger than a thin one. Squeeze two pots, one thick and one thin. Which one bends? How do you know?

□ Your turn

1 Roll

Roll a ball between your palms.

2 Press

Press your thumb into the middle.

3 Pinch and turn

Pinch and turn, pinch and turn.

● YOUR TURN

- 1 Roll one ball of clay as round as you can make it.
- 2 Make a pinch pot from your ball. Stand it up.
- 3 Roll one long coil. How long is it before it breaks?
- 4 Roll one short fat coil and one long thin one.
- 5 Flatten a piece into a slab with your palm.
- 6 Join two coils together so they will not come apart.

One lump of clay, cut in two with a wire. Look at the cut faces: smooth, even and grey all the way through, with no air holes in them. That is clay that is ready to work.

✦ FROM WILLA'S OWN SKETCHBOOK

The oldest clay pot anybody has ever found is about twenty thousand years old. It was made by pinching, exactly the way you just did.

Your turn, and making together

A coil is a rolled sausage of clay.

TRUE**NOT TRUE**

You can join two pieces of dry clay together.

TRUE**NOT TRUE**

Pinching makes the wall of a pot thinner.

TRUE**NOT TRUE**

Clay comes out of the ground.

TRUE**NOT TRUE****● YOUR TURN**

- 1 Tick TRUE or NOT TRUE for each sentence above.
- 2 Score both pieces before you join them. Now pull. Does it hold?
- 3 Build a pot from coils, one on top of the last.
- 4 Which was easier, the pinch pot or the coil pot?
- 5 Sort your shapes from thinnest to thickest.
- 6 Show a partner the join. Can they find it?

□ WHAT YOU WILL NEED

a lump of clay each, a wooden board, a clay tool and a small dish of water

MAKE IT TOGETHER

Work in twos. One of you builds a pot from coils and the other pinches one from a ball. Stand them side by side. Which pot has the more even wall? Which one took longer?

A pinch pot, in four goes. Look at the wall of the finished pot on the right: it is the same thickness all the way round, because Hodge turned it while he pinched.

A clay jar made 2,500 years ago

for the class, on the board

artic.edu, search Amphora storage jar

! WORK SAFELY

Clay is not food, so keep it away from your mouth. Wipe the table and wash your hands when you have finished.

UNIT 1 - TOPIC 1.2

Pressing texture and pattern into clay

● LET US LOOK CLOSELY

Clay remembers. Press something into it and the mark stays there, even after the thing is taken away.

That mark is called a **texture**. A fern leaf leaves thin lines. A piece of string leaves a twisted rope. A fir cone leaves rows of little scales.

Press hard enough to leave a clear mark, but not so hard that you go right through the clay.

○ DO YOU REMEMBER?

You know how to flatten clay into a slab. What did you use to do it?

Six things pressed into one slab. A fern, a piece of string, a fir cone, a button, a comb and a thumb. Look at the mark each one left behind, then look back at the thing that made it.

■ WATCH ME TRY 2

How do I press a fern into clay so the mark is clear?

- 1 Flatten a slab, about as thick as your finger.
- 2 Lay the fern on it and put a sheet of paper on top.
- 3 Press down evenly with your flat palm, then peel the fern off.

We found out: pressing through paper gives a clean mark and does not tear the fern

○ HOW DO YOU KNOW?

Look at the marks above without reading the names. Which one was made by string? How do you know?

● YOUR TURN

- 1 Flatten a slab as thick as your finger.
- 2 Press one leaf into it. Peel the leaf off carefully.
- 3 Press three different things into three corners.
- 4 Draw the mark you liked best in your sketchbook.
- 5 Press the same thing twice, once softly and once hard.
- 6 Which press gave the clearer mark, soft or hard?

A fern being pressed in, and a fern being peeled off. Look at the slab on the right: every little side branch of the fern has printed itself into the clay.

→ GO A LITTLE FURTHER

Make a pattern that repeats. Press the same three things in the same order, again and again, all along a long slab. Carry the pattern on to the end of the strip.

Your turn, and looking closely

● YOUR TURN

- 1 Find three things outside with a texture worth pressing.
- 2 Sort them into two trays: rough things and smooth things.
- 3 Press all three into one slab. Which left the deepest mark?
- 4 Order your three marks from faintest to strongest.
- 5 Swap slabs with a partner. Guess what made each mark.
- 6 Make a tile with a border pattern all the way round the edge.

□ WHAT YOU WILL NEED

a slab of clay each, a rolling pin, a sheet of paper and three things found outside

≡ MAKE IT TOGETHER

Go outside together and each bring back one thing to press. Press them all into one long slab, so the class has a strip of textures from your own playground.

! WORK SAFELY

Wash anything you bring in from outside, and wash your hands after you have handled it.

UNIT 1 - TOPIC 1.3

Paint, paper and clay together

● LET US LOOK CLOSELY

A dry clay tile is a surface, like a sheet of paper. You can paint on it, and you can stick things to it.

Sticking torn paper onto a picture is called **collage**. Using paint and paper and pencil all in one picture is called **mixed media**, which just means more than one material.

Paint the tile first and let it dry. Then stick the paper on. If you do it the other way round the paper goes soggy and lifts off at the edges.

○ DO YOU REMEMBER?

You pressed a texture into a slab of clay. What did you press into it?

Four layers, in this order. Dry the tile hard, paint it one colour, tear the paper, then glue it on and draw on top. The order matters.

■ WATCH ME TRY 3**Which goes on first, the paint or the paper?**

- 1 Rufus painted one tile and stuck paper on it straight away.
- 2 The paper went soggy and curled up at the edges.
- 3 On the next tile he let the paint dry hard first, then glued.

We found out: the paint goes on first and must be dry, or the paper lifts off

● YOUR TURN

- 1 Paint your dry tile one colour all over. Leave it to dry.
- 2 Tear three pieces of paper. Do not use scissors.
- 3 Arrange the three pieces before you glue anything down.
- 4 Glue them on. Press each one flat with your finger.
- 5 Draw a line in pencil across the top of the paper.
- 6 Name the three materials you used on your tile.

□ HOW DO YOU KNOW?

Rufus glued his paper on while the paint was still wet, and it lifted off at the corners. How do you know why that happened?

Three colours are plenty for one small tile. One colour, and one more, and a quiet one. Four starts to look muddy.

Your turn, and making together

● YOUR TURN

- 1 Look at your finished tile. Say one thing you like about it.
- 2 Say one thing you would do differently next time.
- 3 Which material shows most on your tile, paint or paper?
- 4 Torn paper or cut paper: which edge do you prefer? Say why.
- 5 Hold your tile beside a partner's. Name one difference.
- 6 Give your tile a name of its own.

□ WHAT YOU WILL NEED

a dry clay tile each, paint, a brush, torn paper, glue and a pencil

≡ MAKE IT TOGETHER

Work in fours. Each of you makes one tile the same size. Lay all four together on the table so they make one big picture. Does anything join up across the edges?

→ GO A LITTLE FURTHER

Make a second tile using only ONE material. Which of your two tiles do you like more, and why?

**WORK SAFELY**

Glue sticks to fingers as well as paper, so wash your hands before you touch your face.

UNIT 1 - TOPIC 1.4

What clay is, and what it does

WARM
YOUR
HANDS
UP

Hold a lump of clay in your hand for a minute. Does it feel cold or warm? Does it feel wet or dry?

● LET US LOOK CLOSELY

Clay is dug out of the ground. It is made of tiny bits of rock, ground down so small that water can slide between them, which is why wet clay moves under your hands.

As clay dries, that water leaves. The bits pull closer together, so the pot gets a little smaller. Clay **shrinks** as it dries.

If one part dries faster than another, the two parts pull against each other and the clay **cracks**. That is why a pot dries slowly, under a cloth, away from the window.

Dry clay is still soft enough to break. To make it hard for ever it has to be **fired**, which means baked in a very hot oven called a **kiln**. Your teacher does the firing.

The three stages every clay pot goes through. Wet, dry, then fired. Only an adult does the last one.

1 Wet clay

Soft, dark grey, moves under your hands.

2 Dry clay

Pale, a little smaller, and still breakable.

3 Fired clay

Hard for ever, and warm orange.

■ WATCH ME TRY 4

Why did Hodge's first pot crack as it dried?

- 1 He left it on the sunny windowsill overnight.
- 2 The side in the sun dried much faster than the shady side.
- 3 The dry side shrank while the damp side did not, so it split.

We found out: clay cracks when one part dries faster than another, so pots dry slowly under a cloth

□ HOW DO YOU KNOW?

Two pots were made the same size. One is fired and one is only dry. How could you tell them apart without breaking either?

□ Your turn

● YOUR TURN

- 1 Say what the word **shrink** means, in your own words.
- 2 Why does a pot dry under a damp cloth and not in the sun?
- 3 Measure your pot today. Measure it again in three days.
- 4 Which adult will fire your pot for you? Say their name.
- 5 Drop a dry unfired scrap into water. What happens to it?
- 6 Say one thing fired clay can do that dry clay cannot.

WHAT WE DID	WHAT THE CLAY DID
left it in the sun	
dried it under a cloth	
put it in water	

Write or draw what happened to each piece.

Your turn, and looking closely

Clay comes out of the ground.

TRUE

NOT TRUE

Clay gets a little smaller as it dries.

TRUE

NOT TRUE

A pot dries best on a sunny windowsill.

TRUE

NOT TRUE

Fired clay is hard for ever.

TRUE

NOT TRUE

● YOUR TURN

- 1 Tick TRUE or NOT TRUE for the four sentences above.
- 2 Sort three pieces of clay from wettest to driest.
- 3 Find something in this room that is made of fired clay.
- 4 Draw your pot as it is now. Keep the drawing.
- 5 Rufus says his dry pot is waterproof. How could you find out?
- 6 Name one other material that gets harder when it is baked.

□ WHAT YOU WILL NEED

three scraps of clay at different stages, a ruler and a dish of water

≡ MAKE IT TOGETHER

Put a dry unfired scrap of clay in a dish of water and leave it. Look at it after ten minutes. Now do the same with a fired piece. Which one survives?

✦ FROM WILLA'S OWN SKETCHBOOK

A potter in Japan called Shoji Hamada threw thousands of bowls and signed almost none of them, because he thought the pot mattered more than his name.

**WORK SAFELY**

The kiln is very hot and it is switched on, opened and emptied by an adult only. Never touch a kiln, even when it looks cool.

UNIT 1 - THE CLAY BENCH

Words we used in Unit 1

clay

wet earth you can shape

pinch pot

a pot made with finger and thumb

coil

a rolled sausage of clay

slip

runny clay that glues two pieces

score

to scratch clay before joining it

texture

how a surface feels, or the mark it leaves

fire

to bake clay hard in a kiln

collage

a picture made from stuck-on pieces

☐ **CHECK WHAT YOU CAN DO**

- 1 Name the four things your hands can do to clay.
- 2 Explain why a pot is dried slowly under a cloth.
- 3 Say who is allowed to fire clay in the kiln.
- 4 Say which goes on a tile first, the paint or the paper.
- 5 Describe one texture you pressed, and what made it.

What makes something a sculpture?

for teachers, before the unit

tate.org.uk, art terms, sculpture

UNIT 1 - THE CLAY BENCH

Look what I can do!

LOOK WHAT I CAN DO!	CONFIDENT	ALMOST THERE	NEEDS MORE WORK
making a pinch pot	☐	☐	☐
pressing a clear texture	☐	☐	☐
working with paint and paper together	☐	☐	☐
saying what clay does as it dries	☐	☐	☐

- ☐ I can pinch, roll, flatten and join clay.
- ☐ I can press a texture into clay and say what made it.
- ☐ I can paint and stick paper onto a dry clay tile.
- ☐ I can say what happens to clay as it dries.
- ☐ I can say why my pot cracked, or why it did not.

Hodge kept his very first pot, crack and all. Look at the crack running down one side. He keeps it on the shelf because it is the pot that taught him about drying.

UNIT 1 - THE CLAY BENCH

Along the way: a tile for the studio wall

Make one clay tile for the class wall. Your tile shows a texture you found outside, and your own three colours on top.

□ WHAT YOU WILL NEED

a slab of clay, a rolling pin, three things found outside, paint, a brush and torn paper

● YOUR TURN

- 1 Roll a slab as thick as your finger. Trim it to a square.
- 2 Press your three found things into the clay.
- 3 Dry it slowly under a cloth for four days.
- 4 Ask your teacher to fire it in the kiln.
- 5 Paint the fired tile, and let the paint dry hard.
- 6 Glue one piece of torn paper on last of all.

! WORK SAFELY

The kiln is switched on, opened and emptied by an adult only.

UNIT 1 - THE CLAY BENCH

Along the way: how it went

A finished tile: pressed texture, paint, and one piece of torn paper. Look for the fern underneath the paint. It is still there, and you can feel it with a finger.

□ HOW DO YOU KNOW?

Which of your three textures came out clearest? Say how you know.

／ FOR TEACHERS

Unit 1 establishes the habit the rest of the book depends on: pupils make something, look at it, and say one thing about it. The looking matters more than the pot. Keep every first attempt, including the cracked ones, for the exhibition at the end of the book.

Drying is where classes lose work. Pots left on a sunny sill will crack overnight, and pupils blame themselves for it. Wrap work loosely and store it away from radiators and windows, and tell pupils that is why.

UNIT 2 • THE LOOKING BENCH

2

Drawing with purpose

Willa looks for a whole minute before she makes a single mark. Come and look with her.

Drawing is not a thing your hand does. It is a thing your eyes do, and your hand writes down.

Picture 2.0 Look at how close Willa's eyes are to her paper, and then at the real beetle sitting on the sill in front of her. She is drawing from the beetle, not from memory.

UNIT 2 - THE LOOKING BENCH

Before you begin

▶ WHAT WILLA NOTICED

I drew a beetle. Then I put the real beetle beside my drawing, and my beetle had two legs too few.

Willi had drawn the beetle she remembered instead of the beetle in front of her. It is the commonest mistake in drawing, and the cure is simple: count before you draw.

◎ BY THE END YOU WILL

- ✓ count the parts of an insect before drawing it
- ✓ press hard and soft to make dark and light lines
- ✓ put the eyes halfway down a face
- ✓ make a drawing that tells somebody something
- ✓ draw a group of objects that are standing still

Willa's drawing, and the beetle she drew it from. Look at the two of them side by side. That is the only way to find out what you left out.

◆ **IN THE STUDIO**

Look at your own hand. Really look at it. How many creases can you count across one knuckle?

UNIT 2 - TOPIC 2.1

Drawing insects

WARM
YOUR
HANDS
UP

Shake both hands loosely for ten seconds. Now draw ten circles in the air with your finger.

● LET US LOOK CLOSELY

An insect is not a blob with legs. It has **three parts** to its body, and **six legs**, and every leg joins on to the middle part.

If you draw a beetle from memory you will probably give it four legs, and put them in the wrong place. Everybody does.

So do not draw from memory. Count first. How many legs? How many antennae? Then draw what you counted.

Counting is part of the drawing, not something before it. Look for a whole minute. Count the legs out loud. Draw the three body parts as three light shapes. Then add all six legs onto the middle part.

■ WATCH ME TRY 1

How many legs should my beetle have, and where do they join?

- 1 Look at the real beetle. Count the legs out loud: six.
- 2 Look again at where each leg starts.
- 3 All six join onto the middle part of the body, not the front.

We found out: a beetle has six legs and they all join onto the middle body part

○ HOW DO YOU KNOW?

Willa says every insect has six legs. A spider has eight. How could you find out whether a spider is an insect?

The beetle Willa was drawing from. Count its legs. Then find where each one joins the body, and count the two antennae as well.

● **YOUR TURN**

- 1 Count the legs on the beetle in the picture. Say the number.
- 2 Draw three light shapes for the three body parts.
- 3 Add six legs. Check they all join the middle part.
- 4 Add the antennae. How many did you count?
- 5 Hold your drawing beside the picture. Name one difference.
- 6 Draw the same beetle again, smaller, without looking at your first.

Your turn, and looking closely

a ladybird

a dragonfly

a skeleton leaf

a pine cone

Four things worth drawing. Every one has a pattern in it.

Four marks for four surfaces. Try each one in the box before you choose.

A rectangular box with a white interior and a light beige border, intended for drawing a hairy leg.

hairy leg

A rectangular box with a white interior and a light beige border, intended for drawing a shiny shell.

shiny shell

A rectangular box with a white interior and a light beige border, intended for drawing a spotty wing.

spotty wing

A rectangular box with a white interior and a light beige border, intended for drawing rough bark.

rough bark

A rectangular box with a white interior and a light beige border, intended for drawing something of your own.

your own

A rectangular box with a white interior and a light beige border, intended for drawing something of your own.

your own

● YOUR TURN

- 1 Choose one mark from the sheet above for a shiny shell.
- 2 Draw a ladybird. Use dots for its spots.
- 3 Draw one wing. Show the veins inside it.
- 4 Sort your marks from faintest to strongest.
- 5 Swap drawings with a partner. Count their insect's legs.
- 6 Which of your drawings today looks most like the real thing?

✦ FROM WILLA'S OWN SKETCHBOOK

A stag beetle's huge jaws are not for biting. The males use them for wrestling each other, like antlers.

▣ WHAT YOU WILL NEED

a hand lens, a pencil, a sketchbook and a picture of a real insect

≡ MAKE IT TOGETHER

Work in pairs. One of you describes an insect out loud without naming it, while the other draws only what they hear. Then look at the real one together. What did the words leave out?

An artist who drew insects from life

for the class, on the board

rijksmuseum.nl, Maria Sibylla Merian

WORK SAFELY

Look at insects with a hand lens and leave them where they are. Wash your hands afterwards.

UNIT 2 - TOPIC 2.2

Drawing a face

● LET US LOOK CLOSELY

A face is not a circle with three dots in it. Look at a real one.

The eyes are about **halfway down** the head, not near the top. The ears start level with the eyes. There is a lot more head above the eyes than you think.

A face is nearly the same on both sides, which artists call **symmetry**. Nearly, but not exactly: look and see.

○ DO YOU REMEMBER?

You counted an insect's legs before you drew them. What will you count on a face?

A head with the halfway line drawn across it. Look where the line falls: straight through both eyes, with a whole forehead above it. Most people draw the eyes far too high.

■ WATCH ME TRY 2

Where do the eyes really go on a face?

- 1 Rufus drew the eyes near the top, the way most people do.
- 2 Then he held a ruler across his partner's eyes and looked.
- 3 The eyes sat halfway down, with a whole forehead above them.

We found out: the eyes sit about halfway down the head, not near the top

□ HOW DO YOU KNOW?

Draw a line halfway down your partner's head with your finger in the air. Are their eyes above it or below it? How do you know?

● YOUR TURN

- 1 Draw an egg shape for a head. Do not add anything yet.
- 2 Draw a light line halfway down your egg shape.
- 3 Put the eyes on that halfway line.
- 4 Put the ears level with the eyes.
- 5 Draw the nose between the eyes and the chin.
- 6 Look at your partner. Add one thing that is just theirs.

A face drawn in line only, with nothing shaded in. Look at how much it still tells you, with no dark and no light anywhere in it.

Your turn, and drawing together

Half a face is drawn. Draw the other half to match it.

DRAW THE OTHER HALF HERE

Copy one square at a time, not the whole face at once.

1	2
3	4

● YOUR TURN

- 1 Draw your partner's face. Take a whole three minutes.
- 2 Now draw them again in thirty seconds. Compare the two.
- 3 Draw a face showing how you feel today.
- 4 Order your three faces from quickest to slowest.
- 5 Show your partner their portrait. Ask what you missed.
- 6 Draw one eye on its own, as big as your whole palm.

▣ WHAT YOU WILL NEED

a pencil, a rubber, a sketchbook and a partner to sit still

≡ MAKE IT TOGETHER

Sit facing a partner. Draw each other at the same time, both looking up as often as you look down. Then put the two drawings side by side. Did you both notice the same things?

▲ STUDIO CHALLENGE

Draw your partner without looking at your paper once. Everybody's comes out strange, and some come out surprisingly good.

**What a portrait is, and what it is for**

for teachers, to use with the class

[tate.org.uk](https://www.tate.org.uk/art-terms/portrait), art terms, portrait

! WORK SAFELY

Keep pencils away from faces and eyes while you are drawing close up.

UNIT 2 - TOPIC 2.3

A drawing that tells people something

WARM
YOUR
HANDS
UP

Draw an arrow. Now draw one that means 'go quietly'. Harder, is it not?

● LET US LOOK CLOSELY

Sometimes a drawing has a **job** to do. It has to tell somebody something, without any words at all.

Think about the drawings on a door, or beside a road. They work because they are simple and big and there is nothing extra in them.

So before you draw, decide the one thing your drawing has to say. Then leave everything else out.

A drawing with a job. Taking things OUT is most of the work. Say the one thing it must tell people, choose the simplest picture that says it, draw it big in the middle, then take out anything that is not needed.

■ WATCH ME TRY 3**How do I draw 'this way to the studio' with no words?**

- 1 Rufus drew the studio, the wood, the path and a tree.
- 2 Nobody could tell what it meant, because it was too busy.
- 3 He rubbed it all out and drew one arrow and one paintbrush.

We found out: one simple picture says more than a busy one, so take things out

● YOUR TURN

- 1 Draw a picture that means 'wash your hands here'.
- 2 Show it to a partner. Can they read it without help?
- 3 Draw the same idea again with fewer lines.
- 4 Draw a picture meaning 'the clay lives in here'.
- 5 Draw one meaning 'walk, do not run'.
- 6 Which of your drawings was understood fastest?

○ HOW DO YOU KNOW?

Hodge drew a picture to say 'do not pick the flowers'. Nobody understood it. How could he find out what went wrong?

Four signs, four jobs, no words at all. Look at how little is in each one. Every line that is left is a line that had to be there.

Your turn, and drawing together

MY DRAWING MEANS	WHAT MY PARTNER READ	SAME?

Test your drawings on somebody else, and write down what they said.

● YOUR TURN

- 1 Fill in the chart above with three of your drawings.
- 2 Which drawing was read wrongly? Say why you think so.
- 3 Draw a sign for the studio door. Use no words.
- 4 Colour one part of it. Say why you chose that part.
- 5 Order your signs from clearest to hardest to read.
- 6 Look around the school for a drawing that does a job.

WHAT YOU WILL NEED

a pencil, a thick black pen, paper and a partner to test on

MAKE IT TOGETHER

Work in fours. Each of you draws one sign for the art room. Swap them round the group without saying anything. Keep only the signs that everybody read correctly first time.

GO A LITTLE FURTHER

Real signs are made to work from far away. Pin yours up and walk to the back of the room. Can you still read it?

WORK SAFELY

Put the pen lids back on, and never draw on your skin.

UNIT 2 - TOPIC 2.4

Drawing things that stay still

● LET US LOOK CLOSELY

A **still life** is a drawing of things that do not move. A jug, some fruit, a folded cloth. Artists have drawn them for hundreds of years, because things that stay still let you look for as long as you like.

Set your things up so that some are in front of others. Then look for the shapes **between** them: the gap between the jug and the apple has a shape of its own.

Light from one side helps. It gives every object a bright side and a shadow side, and that is what makes a flat drawing look solid.

○ DO YOU REMEMBER?

You drew a face by looking, not from memory. What did you look for first?

A jug, two apples and a cloth, lit from the left. Look at the bright side of the jug and then at its shadow side. Look for the shape of the gap between the jug and the nearest apple.

■ WATCH ME TRY 4

How do I make a flat drawing of a jug look solid?

- 1 Willa drew the outline of the jug. It looked like a paper cut-out.
- 2 She found the side the light came from and left it pale.
- 3 Then she pressed harder on the other side, and shaded the gap underneath.

We found out: a bright side and a dark side together make a flat shape look solid

Three pencils, and the line each one makes. Press softly for the light side and harder for the shadow. Look at how much darker the bottom line is than the top one.

□ HOW DO YOU KNOW?

Hold your hand between the window and the table. Which side of your hand is bright? How do you know where the shadow will fall?

● YOUR TURN

- 1 Set up a jug, an apple and a cloth on your table.
- 2 Move them until one is in front of another.
- 3 Draw the outline of all three, lightly.
- 4 Find the side the light comes from. Leave it pale.
- 5 Press harder to shade the other side.
- 6 Shade the shadow each thing casts on the table.

Your turn, and drawing together

Hold a card **viewfinder** up and move it about until the group looks best inside the window.

Cut a window this size out of card. What will you leave out?

● YOUR TURN

- 1 Hold the viewfinder up. Choose what to leave out.
- 2 Draw only what fits inside your viewfinder.
- 3 Draw the shape of the gap between two objects.
- 4 Order the three objects from nearest to furthest.
- 5 Move the light to the other side. Draw it again.
- 6 Which of your two drawings looks more solid? Say why.

The same three things, drawn from one place only. Look at what the jug hides. Move one step sideways and it would hide something else.

□ WHAT YOU WILL NEED

a jug, an apple, a cloth, a pencil, a card viewfinder and a lamp or a window

≡ MAKE IT TOGETHER

Set up one still life for the whole group, and sit round it. Everybody draws the same three things from where they are sitting. Then compare: no two drawings will match, because no two of you can see the same thing.

Sunflowers, painted in 1888

for the class, on the board

nationalgallery.org.uk, Van Gogh, Sunflowers

**WORK SAFELY**

Keep the jug away from the table edge, and let an adult move the lamp.

UNIT 2 - TOPIC 2.5

Drawing about something that happened

WARM
YOUR
HANDS
UP

Think of something that happened to you this week. Draw it in ten seconds, using shapes only.

● LET US LOOK CLOSELY

Artists draw and paint about things that have **happened**, not only things they can see.

In 1755 there was a great earthquake in Lisbon. Much of the city fell down, and it was built again afterwards. The straight streets and the patterned pavements in the middle of Lisbon are the new city.

A famous painter called Pablo Picasso made an enormous painting called *Guernica* about a town that was bombed. He did not paint it to look pretty. He painted it so that nobody would forget.

When you draw about something that happened, you are allowed to change how things look, so that people feel it.

Willa drawing about something she found out, with Bruno watching. Look at the picture propped on the easel, then at her paper. She is drawing about it, not copying it.

■ WATCH ME TRY 5

How do I draw about the Lisbon earthquake without copying a picture?

- 1 Willa found out one fact: the old streets were narrow and crooked.
- 2 She found out a second: the new streets were built wide and straight.
- 3 So she drew crooked lines on one half of her paper and straight lines on the other.

We found out: two true facts, drawn as two kinds of line, can tell a whole story

□ HOW DO YOU KNOW?

Willa drew the earthquake by drawing a broken wall. Rufus drew it by drawing people helping each other. Which drawing tells you more? How do you know?

● YOUR TURN

- 1 Name one thing that changed in Lisbon after 1755.
- 2 Draw a crooked old street with narrow buildings.
- 3 Draw a straight new street beside it.
- 4 Which of your two streets feels calmer? Say why.
- 5 Draw the pattern of a Lisbon pavement.
- 6 Choose one colour for your drawing. Say why that one.

Your turn, and drawing together

An artist may change how things looked.

TRUE**NOT TRUE**

A drawing about an event has to be pretty.

TRUE**NOT TRUE**

Picasso painted Guernica about a bombing.

TRUE**NOT TRUE**

You must copy a photograph exactly.

TRUE**NOT TRUE****● YOUR TURN**

- 1 Tick TRUE or NOT TRUE for the four sentences above.
- 2 Draw something that happened in your school this year.
- 3 Make the most important part of it the biggest part.
- 4 Take one thing out of your drawing. Is it better?
- 5 Show it to a partner. Ask them what happened.
- 6 Say one thing you would change if you drew it again.

✦ FROM WILLA'S OWN SKETCHBOOK

The square patterned pavements in Lisbon are called *calçada*. They were laid by hand, one small stone at a time, and they still are.

□ WHAT YOU WILL NEED

paper, a pencil, one coloured pencil and something true to draw about

≡ MAKE IT TOGETHER

Work in threes. Choose one thing that happened at school that you all remember. Each of you draws it on your own, then put the three drawings together. What did each of you think mattered most?

! WORK SAFELY

Choose something you are happy to talk about, and tell your teacher if a drawing makes you feel sad.

UNIT 2 - THE LOOKING BENCH

Words we used in Unit 2

insect

six legs, three body parts

sketchbook

where you keep everything you try

tone

how pale or how dark something is

portrait

a drawing of somebody's face

symmetry

the same on both sides

still life

a drawing of things that do not move

shadow

the dark side, away from the light

outline

the line round the edge of a shape

☐ **CHECK WHAT YOU CAN DO**

- 1 Say how many legs an insect has, and where they join.
- 2 Explain where the eyes sit on a head.
- 3 Say what makes a flat drawing look solid.
- 4 Explain what a drawing with a job must leave out.
- 5 Name one artist who drew about something that happened.

A painting about something that happened

for teachers, to prepare topic 2.5

museoreinasofia.es, Guernica

UNIT 2 - THE LOOKING BENCH

Look what I can do!

LOOK WHAT I CAN DO!	CONFIDENT	ALMOST THERE	NEEDS MORE WORK
counting before drawing	☐	☐	☐
making light and dark tones	☐	☐	☐
drawing a face that looks like somebody	☐	☐	☐
making a drawing do a job	☐	☐	☐
drawing about an event	☐	☐	☐

- ☐ I can count the parts of an insect before I draw it.
- ☐ I can press hard and soft to make dark and light lines.
- ☐ I can put the eyes halfway down a face.
- ☐ I can make a drawing that tells somebody something.
- ☐ I can draw a group of things and make them look solid.
- ☐ I can draw about something that really happened.

Willa's beetle, with all six legs in the right place at last. Count them, then count the antennae. The whole insect is in the picture, nothing cut off.

UNIT 2 - THE LOOKING BENCH

Along the way: a page for the class sketchbook

Make one page for the class sketchbook. It holds three drawings of the same small thing, each one done a different way.

□ WHAT YOU WILL NEED

one small object, a sheet of cartridge paper, a pencil, a rubber and a window with light coming in

● YOUR TURN

- 1 Choose one small thing. Put it where the light falls on it.
- 2 Look at it for a whole minute before you draw anything.
- 3 Draw it once with light lines only.
- 4 Draw it again, pressing harder for the dark parts.
- 5 Draw it a third time without lifting your pencil off the paper.
- 6 Put your three drawings side by side on one page.

WORK SAFELY

Keep your pencil away from your face while you are looking closely.

UNIT 2 - THE LOOKING BENCH

Along the way: how it went

Three drawings of one pine cone, each made a different way. Light lines, then strong shading, then one unbroken line. Look at which one tells you most about the real cone.

□ HOW DO YOU KNOW?

Which of your three drawings looks most like the real thing? Say why.

／ FOR TEACHERS

The whole unit rests on one habit: look, count, then draw. Pupils who draw first and look afterwards produce the remembered symbol rather than the thing in front of them, and no amount of technique fixes that. Insist on the counting out loud, even when it feels slow.

Topic 2.5 needs care. The Lisbon earthquake was chosen because this city was rebuilt after it, so the evidence is the pavement outside rather than an image of suffering. *Guernica* is named as the famous example and not shown. Let pupils choose their own event if the earthquake troubles them: a school event responded to honestly meets the objective just as well.

UNIT 3 • THE PRINTING BENCH

3

Introduction to printing

Rufus presses a block onto paper, lifts it straight up, and gets a surprise. Come and see.

Pressing flips everything over. A block and its print are mirror images, and every printer in the world works round it.

Picture 3.0 Look at Rufus pressing down on the block with both paws, and at the prints already pegged up on the line behind him. Every one of them came off that same block.

UNIT 3 - THE PRINTING BENCH

Before you begin

▶ WHAT RUFUS NOTICED

I glued a shape onto my block and printed it. The print came out back to front, and I had not touched it.

Rufus has found the rule that makes printing printing. Pressing flips everything over, so a block and its print are mirror images of each other. Every printer in the world works round it.

◎ BY THE END YOU WILL

- ✓ make a print by pressing, and say what a print is
- ✓ turn one shape to build a repeating pattern
- ✓ build a relief block and print from it many times
- ✓ make a monoprint, which can only ever be one
- ✓ print a face using shapes an adult has cut

Rufus lifting the paper off his block. Whatever was raised on the block is now on the paper, and it is the other way round. He did not turn anything: the pressing did it.

◆ IN THE STUDIO

Press your thumb hard onto the back of your other hand. Lift it off. Can you see the mark you left?

UNIT 3 - TOPIC 3.1

Printing with hands and feet

WARM
YOUR
HANDS
UP

Spread your fingers wide, then squeeze them together. Do it five times to wake your hands up.

● LET US LOOK CLOSELY

You already own a printing block. Two of them, in fact, on the ends of your arms.

Press your palm into paint and then onto paper, and the paper keeps the shape of your hand. That is a **print**: paint moved from one surface onto another by pressing.

Your hand can print again and again, and every print comes from the same block. That is what makes printing different from drawing.

Four printing blocks, all of them part of you. The whole palm, one finger, the side of a fist and a thumb. Look at how different the four marks are.

1 Paint

Paint the palm of your hand thinly.

2 Press

Press it flat onto the paper.

3 Lift

Lift it straight up, not sideways.

■ WATCH ME TRY 1

Why did my handprint come out as a smudge?

- 1 Rufus pressed his hand down and then slid it sideways.
- 2 The wet paint spread and the shape was lost.
- 3 Next time he pressed once and lifted straight up.

We found out: a print must be lifted straight up, or the paint slides and smudges

One clean print, and one that slid sideways. Look at the left one: every pad and claw is there. Then look at the right one, where the whole shape has gone.

□ HOW DO YOU KNOW?

Rufus printed his hand twice without adding more paint. The second print is fainter. How do you know why?

● YOUR TURN

- 1 Print one hand. Lift it straight up.
- 2 Print the same hand again with no new paint.
- 3 Order your prints from palest to strongest.
- 4 Print one finger five times in a row.
- 5 Print your fingers to make a caterpillar.
- 6 Count how many prints you got from one painting.

Your turn, and printing together

inking tile

a cut potato

string

printing paper

A printing bench. An adult cuts the potato.

Print your own pattern along this strip.

YOUR PRINTED STRIP

● YOUR TURN

- 1 Which part of your hand makes the biggest print?
- 2 Print a flower using your thumb for the petals.
- 3 Print a border all the way round a sheet of paper.
- 4 Look at two prints. Are any two exactly the same?
- 5 Print with the side of your fist. What does it look like?
- 6 Wash your hands, then say which print you liked best.

□ WHAT YOU WILL NEED

thin paint in a shallow tray, a long strip of paper, a bowl of warm water and a towel

≡ MAKE IT TOGETHER

Make one long class strip. Everybody prints one hand next to the last, all the way along. Then look for two prints that are the same. There will not be any.

How relief printing works

for the class, on the board

bbc.co.uk/bitesize, what is relief printing

WORK SAFELY

Use paint made for skin, keep it away from your mouth and eyes, and wash your hands as soon as you have finished.

UNIT 3 - TOPIC 3.2

Patterns that repeat

● LET US LOOK CLOSELY

Look at the tiles on an old wall in Lisbon. They are called **azulejos**, and a whole wall of them is usually made from just ONE tile.

The trick is turning. Print the same shape four times, turned a quarter turn each time, and the four together make a new shape that was not in any one of them.

A pattern that goes on and on like that is called a **repeat**.

○ DO YOU REMEMBER?

You printed one finger five times in a row. Was every print exactly the same?

Eight tiles, ONE shape. The same quarter circle, turned a quarter turn each time. Look at what appears where four corners meet: a whole circle that is on none of the tiles.

■ WATCH ME TRY 2**How does one shape make a whole wall of pattern?**

- 1 Hodge printed his quarter circle four times, all facing the same way.
- 2 Nothing joined up. The wall looked like rows of separate bites.
- 3 He printed it again, turning the block a quarter turn each time.

We found out: turning the same block is what makes the pattern join up

□ HOW DO YOU KNOW?

Cover three of the four tiles with your hand. Where has the big circle gone? How do you know it was never on one tile?

Four tiles, one motif, turned four ways. Look at the middle, where the four corners meet: a whole circle has appeared, and it is on none of the four tiles by itself.

● YOUR TURN

- 1 Print one shape four times, all the same way round.
- 2 Print it four more times, turning it each time.
- 3 Which of the two joins up? Say why.
- 4 Print a row of eight, turning every other one.
- 5 Colour your pattern using only two colours.
- 6 Find a repeating pattern somewhere in this room.

Your turn, and printing together

Now design one of your own on squared paper.

YOUR MOTIF	TURNUED ONCE
TURNUED TWICE	TURNUED THREE TIMES

● YOUR TURN

- 1 Draw your own motif inside one square.
- 2 Draw it again turned a quarter turn.
- 3 Fill four squares by turning it each time.
- 4 Order your patterns from simplest to busiest.
- 5 Join your four squares to a partner's four.
- 6 Does the pattern still join up across the middle?

□ WHAT YOU WILL NEED

squared paper, two coloured pencils, a small printing block and a stamp pad

≡ MAKE IT TOGETHER

Work in fours. Each of you prints four tiles of the SAME motif but turned differently. Lay all sixteen together on the table. Does a bigger shape appear that none of you drew?

★ FROM WILLA'S OWN SKETCHBOOK

Some Lisbon walls hold thousands of tiles and only two or three different designs. The rest is turning.

**Portuguese tiles that repeat**

for the class, on the board

[artsandculture.google.com](https://artsandculture.google.com/pombalino-pattern-tiles), pombalino pattern tiles

**WORK SAFELY**

Wipe the stamp pad and put its lid on, and keep it off your clothes.

UNIT 3 - TOPIC 3.3

Printing from a raised block

WARM
YOUR
HANDS
UP

Close your eyes and feel the palm of your hand. Which parts stand up highest?

● LET US LOOK CLOSELY

A **relief** block has parts that stand up higher than the rest. Only the raised parts touch the paper, so only the raised parts print.

You do not cut your block. You build it up: glue string or shapes of card onto a flat piece of card, and let the glue dry hard.

Here is the surprising part. Press the block down and lift it, and your shape comes out the other way round. Printing gives you a **mirror** every time.

Only the raised parts touch the paper, so only they print. Glue string onto card and let it dry hard, roll ink over the raised string only, press the paper down, then peel it off and look.

■ WATCH ME TRY 3**How do I get a clear print from my string block?**

- 1 Hodge rolled the ink on thickly and the string filled in solid.
- 2 He wiped it, let it dry, and rolled a much thinner layer.
- 3 Then he pressed the paper down firmly all over before peeling it.

We found out: a thin layer of ink and a firm even press give the clearest print

A block with a raised leaf shape, and the print it made. Hold the two side by side and look: the print is the same leaf, facing the other way.

□ HOW DO YOU KNOW?

Rufus glued a letter shape onto his block and it printed backwards. How do you know that would happen every time?

● **YOUR TURN**

- 1 Glue string onto card in a simple shape.
- 2 Wait until the glue is dry and hard.
- 3 Roll a thin layer of ink over the raised parts.
- 4 Press paper onto the block. Rub gently all over.
- 5 Peel the paper off. Is your shape reversed?
- 6 Print the same block again without adding ink.

Your turn, and printing together

How many prints from one inking?

PRINT NUMBER	HOW STRONG IT IS	DID I ADD INK?
1		
2		
3		
4		

● **YOUR TURN**

- 1 Fill in the chart for four prints in a row.
- 2 Order your four prints from strongest to faintest.
- 3 Print your block onto coloured paper instead of white.
- 4 Print it twice on one sheet, overlapping a little.
- 5 Swap blocks with a partner and print theirs once.
- 6 Say one thing you would change about your block.

▣ WHAT YOU WILL NEED

card, string, glue, printing ink on a tile, a roller and paper

≡ MAKE IT TOGETHER

Work in pairs. Print one block ten times in a row without adding ink, laying the prints out in order. Where does it stop being worth printing?

▲ STUDIO CHALLENGE

Make a block that prints your initial the right way round. You will have to glue it on backwards.

**The Great Wave, printed from a block**

for the class, on the board

artic.edu, Under the Wave off Kanagawa

**WORK SAFELY**

Ink stains, so keep your apron on. Nobody uses a cutting tool in this unit: your block is built up with glue, never cut.

UNIT 3 - TOPIC 3.4

One print only: monoprinting

● LET US LOOK CLOSELY

Roll a thin layer of ink onto a smooth tile. Now draw in it with a stick, or the wrong end of a brush. Where you draw, the ink is pushed aside.

Lay paper on top, rub gently, and peel it off. You have a **monoprint**.

Mono means one. Lifting the paper takes the ink with it, so there is nothing left on the tile to print again. A monoprint is one only, and that is the whole point of it.

A relief block is the opposite: it prints again and again. Two kinds of printing, and you have now done both.

○ DO YOU REMEMBER?

Your string block printed four times over. Did each print get stronger or fainter?

Mono means one. There is nothing left to print again. Roll a thin layer of ink on the tile, draw in the wet ink with a stick, lay paper on top and rub gently, then peel it off. Look at the tile: it is empty.

■ WATCH ME TRY 4

Why is my second monoprint almost blank?

- 1 Rufus made one monoprint and it came out well.
- 2 He laid a second sheet on the same tile and rubbed it.
- 3 Almost nothing came off, because the first sheet took the ink.

We found out: the first print lifts the ink away, so a monoprint is one only

A soft monoprint of a fern, with edges that spread a little. Look at how the line is soft, not sharp. That softness is what a monoprint gives you and a block cannot.

□ HOW DO YOU KNOW?

Willa says she can print her monoprint a second time. Look at the tile after the first print. How do you know she cannot?

● YOUR TURN

- 1 Roll a thin even layer of ink onto your tile.
- 2 Draw a simple shape in the ink with a stick.
- 3 Lay paper on top and rub it gently all over.
- 4 Peel it off slowly from one corner.
- 5 Try to print a second sheet. What happens?
- 6 Say what *mono* means, in your own words.

Your turn, and printing together

a stick

the roller

a cloth

a real leaf

The roller lays the ink down. The other three take it away again, and each one leaves its own kind of line.

● YOUR TURN

- 1 Draw in the ink with a comb. Print it.
- 2 Draw in the ink with a cloth. Print it.
- 3 Lay a real leaf on the inked tile, then print.
- 4 Order your monoprints from faintest to strongest.
- 5 Say which tool gave the softest line.
- 6 Is any monoprint the same as another? Say why.

□ WHAT YOU WILL NEED

a smooth tile, printing ink, a roller, sticks and combs, paper and a damp cloth

≡ MAKE IT TOGETHER

Work in pairs. One of you draws in the ink while the other watches, then swap. Print both. Then try to tell which print came from which drawing.

Why a monoprint is only ever one

for teachers, to prepare topic 3.4

[tate.org.uk](https://www.tate.org.uk), art terms, monotype

WORK SAFELY

Wash the tile in cool water when you have finished, and keep inky hands away from your face.

UNIT 3 - TOPIC 3.5

Printing a face with vegetables

WARM
YOUR
HANDS
UP

Look at a cut pepper. What could that ring BE, if it were part of a face?

● LET US LOOK CLOSELY

A cut vegetable is a ready-made printing block. The flat cut face is the part that prints.

Half a potato prints a fat round shape. A slice of pepper prints a ring with curly walls inside. A mushroom prints a stalk and a fan of lines.

Your teacher cuts them for you before the lesson, because that job needs a sharp knife and an adult.

Look at the shapes and ask what each one could BE. A pepper ring makes a good pair of eyes. A mushroom fan makes good hair.

Biggest shape first, smallest last. It is hard to print small on wet paint, so the head goes down before the eyes do.

■ WATCH ME TRY 5

Which vegetable makes the best eyes?

- 1 Rufus tried a potato half. It printed one big flat circle.
- 2 He tried a pepper ring, and it printed a circle with a hole.
- 3 The hole looked exactly like the dark middle of an eye.

We found out: a pepper ring makes the best eyes, because it prints a ring not a blob

Printed shapes, with the cut vegetables that made them below. Match each print to the vegetable underneath it before you read the names.

1 Choose

Choose which shape will be the eyes.

2 Print big

Print the biggest shape first, for the head.

3 Print small

Print the eyes, nose and mouth on top, then let it dry.

HOW DO YOU KNOW?

Hodge printed the eyes before the head, and the head covered them up. How do you know which order to print in?

YOUR TURN

- 1 Print one potato half in the middle of your paper.
- 2 Let it dry while you plan the rest.
- 3 Print two pepper rings for the eyes.
- 4 Choose something to print for the nose.
- 5 Print a mushroom fan for the hair.
- 6 Say which vegetable surprised you most.

Your turn, and printing together

A print is made by pressing.

TRUE

NOT TRUE

A monoprint can be printed twice.

TRUE

NOT TRUE

A relief block prints many times.

TRUE

NOT TRUE

Your teacher cuts the vegetables.

TRUE

NOT TRUE

● YOUR TURN

- 1 Tick TRUE or NOT TRUE for the four sentences above.
- 2 Print a whole face using three vegetables only.
- 3 Print a second face showing a different feeling.
- 4 Order your prints from palest to boldest.
- 5 Show a partner. Ask them what your face is feeling.
- 6 Name the two kinds of printing you have done.

▣ WHAT YOU WILL NEED

vegetables halved by an adult beforehand, paint in shallow trays, paper and a cloth

≡ MAKE IT TOGETHER

Work in fours and print one face each, then peg all four up together. Which parts did everybody use the same vegetable for?

→ GO A LITTLE FURTHER

Print a face using only ONE vegetable, printed different ways up. It is harder, and often better.

**WORK SAFELY**

An adult cuts every vegetable before the lesson. Printing vegetables are not for eating, so wash your hands afterwards.

UNIT 3 - THE PRINTING BENCH

Words we used in Unit 3

print

a mark made by pressing

block

the thing you press onto the paper

roller

it spreads a thin layer of ink

ink

the colour you print with

repeat

a pattern that goes on and on

azulejo

a Portuguese painted tile

monoprint

a print you can only make once

mirror

the same shape the other way round

☐ **CHECK WHAT YOU CAN DO**

- 1 Say what a print is, in your own words.
- 2 Explain why a print comes out the other way round.
- 3 Say how one tile can make a whole wall of pattern.
- 4 Explain why a monoprint can only be made once.
- 5 Say who cuts the vegetables, and why.

UNIT 3 - THE PRINTING BENCH

Look what I can do!

LOOK WHAT I CAN DO!	CONFIDENT	ALMOST THERE	NEEDS MORE WORK
pressing and lifting cleanly	☐	☐	☐
turning a shape to make a repeat	☐	☐	☐
building a block that prints well	☐	☐	☐
making a monoprint	☐	☐	☐
saying why a print is reversed	☐	☐	☐

- ☐ I can make a print by pressing and lifting straight up.
- ☐ I can turn one shape to build a pattern that joins up.
- ☐ I can build a relief block and print it many times.
- ☐ I can make a monoprint, and say why there is only one.
- ☐ I can print a face from shapes an adult has cut.
- ☐ I can say why a print is a mirror of its block.

Rufus kept his very first monoprint, smudge and all. Look at the smear along one edge where the paper moved. He keeps it because it is the print that taught him to lift straight up.

UNIT 3 - THE PRINTING BENCH

Along the way: a printed strip for the corridor

Print a repeating pattern along one long strip of paper. Every print on it comes from the same block.

□ WHAT YOU WILL NEED

a long strip of paper, a flat block with string glued to it, a roller, printing ink on a tile and a cloth

● YOUR TURN

- 1 Roll a thin layer of ink onto the tile.
- 2 Roll the inked roller over your block.
- 3 Press the block onto the paper. Lift it straight up.
- 4 Turn the block a quarter turn and print again beside it.
- 5 Keep turning and printing all along the strip.
- 6 Hang it up to dry before anybody touches it.

! WORK SAFELY

Ink stains clothes, so keep your apron on until the strip is hung up.

UNIT 3 - THE PRINTING BENCH

Along the way: how it went

One block, printed again and again along a paper strip. Look for the place where the pattern starts over. Every mark on the strip came off the same block below it.

□ HOW DO YOU KNOW?

Look along your strip. Where does the pattern start to repeat?

／ FOR TEACHERS

The mirror rule is the one idea to keep returning to. Pupils accept it cheerfully until they print a letter, and then it becomes real. The initial challenge at the end of topic 3.3 is worth the mess for exactly that reason.

Two kinds of printing sit side by side in this unit on purpose. A relief block repeats and a monoprint does not, and holding both in mind is what turns printing from an activity into an idea. Ask which kind a pupil would choose for forty invitations, and why.

UNIT 4 • THE PAINT BENCH

4

Painting

Bruno mixes for a long time before he paints anything.
Come and mix a colour nobody else has.

Three colours plus white will make almost anything, if you are willing to mix. The mixing IS the painting.

Picture 4.0 Look past Bruno's shoulder at the board on his easel, then out of the window at the real trees he is painting from. His paint box is open on the bench with the water beside it.

UNIT 4 - THE PAINT BENCH

Before you begin

▶ WHAT BRUNO NOTICED

I only had red, yellow and blue. But I have just painted a picture with nine colours in it.

Bruno has found what a paint box is for. Three colours plus white will make almost anything, if you are willing to mix. The mixing IS the painting.

○ BY THE END YOU WILL

- ✓ paint a real plant by looking at it
- ✓ make different marks with one brush
- ✓ name three painters who worked in different ways
- ✓ paint in layers, letting each one dry
- ✓ mix a new colour from two paints
- ✓ paint a place you have only imagined

Three paints, and the colour Bruno mixed from two of them. Look at the yellow pot on one side, the blue pot on the other, and the green in the saucer between them. He made that green: it was not in the box.

◆ IN THE STUDIO

Look out of the window at the sky. What colour is it, really, right now? Say it out loud.

UNIT 4 - TOPIC 4.1

Painting what is really there

WARM
YOUR
HANDS
UP

Hold one leaf up to the window. Now hold it against the table.
Did its colour change?

● LET US LOOK CLOSELY

Painting from nature means painting the thing in front of you, not the thing you remember.

Put a real plant on the table and look at it hard. A leaf is not one flat green: it is pale where the light lands and much deeper underneath. Some leaves are almost grey. Some are nearly yellow.

Paint the big shapes first, while the paper is dry and clean. Leave the small things until the big shapes have dried.

Look, mix, big shapes, then small. In that order. Put the real plant where you can see it, mix the colour you can actually see rather than the green in the tin, paint the big shapes and let them dry, then add the small things on top.

■ WATCH ME TRY 1

How do I mix the green I can actually see?

- 1 Bruno painted a leaf with green straight from the tin. It looked wrong.
- 2 He looked again: the real leaf was duller and a little yellow.
- 3 So he mixed blue and yellow himself, and added a touch of brown.

We found out: mixing the green you can see beats using the green in the tin

The green in the tin is only a starting point.

from the tin the green that came in the box, straight onto the paper

add a touch a little yellow, because the real leaf is warmer than that

and more of this the smallest touch of brown, to take the shine off it

HOW DO YOU KNOW?

Rufus says every leaf on the plant is the same green. Hold two leaves side by side. How do you know whether he is right?

YOUR TURN

- 1 Put a real plant on the table in front of you.
- 2 Mix a green that matches one real leaf.
- 3 Paint the biggest shape you can see. Let it dry.
- 4 Mix a second, different green for another leaf.
- 5 Paint the stem. Is it the same colour as the leaves?
- 6 Add the smallest details last of all.

Your turn, and painting together

cow parsley

a pine cone

an apple

a jug

Four real things to paint from. Choose one and look hard.

One colour, five strengths, made by adding more water. Look along the row: it is the same paint all the way, and only the amount of water changed.

● YOUR TURN

- 1 Paint the same leaf again using more water in your paint.
- 2 Which of your two leaves looks further away?
- 3 Paint the shadow the plant casts on the table.
- 4 Order your greens from palest to deepest.
- 5 Hold your painting beside the real plant. Name one difference.
- 6 Paint one leaf without using any green at all.

□ WHAT YOU WILL NEED

a real plant in a jar, paints, a round brush, water and thick paper

≡ MAKE IT TOGETHER

Put one plant in the middle of the table and sit round it. Everybody paints it from where they sit. Then compare: whose painting shows the back of the plant?

A pond painted in the painter's own garden

for the class, on the board

nationalgallery.org.uk, Monet, The Water-Lily Pond

WORK SAFELY

Keep water pots away from the paper edge, and mop spills at once so nobody slips.

UNIT 4 - TOPIC 4.2

Texture with brush strokes

● LET US LOOK CLOSELY

One brush can make a dozen different marks. What changes is what your hand does.

Dab the tip and you get spots. Drag the side and you get a wide streak. Press hard and the mark spreads; press lightly and it thins to a hair. A nearly dry brush scrubs a rough, broken mark.

Different marks make different textures. Choose the mark that matches the thing: dabs for leaves, drags for water, scrubs for bark.

○ DO YOU REMEMBER?

You mixed a green that matched a real leaf. What did you add to make it duller?

Six marks, one brush. Your hand is what changes. Dab, drag, scrub, flick, press, swirl. Cover the names and try to tell which is which.

■ WATCH ME TRY 2

Which mark should I use for the bark of a tree?

- 1 Bruno painted the trunk with one smooth stroke. It looked like a pipe.
- 2 He looked at real bark: it was rough and broken and full of lines.
- 3 So he squeezed most of the water out and scrubbed with a dry brush.

We found out: a nearly dry brush scrubs a broken mark, which is what bark looks like

Six patches of paint, each made with a different stroke. Look at the edges of each patch. A dabbed edge and a scrubbed edge do not look at all alike.

□ HOW DO YOU KNOW?

Look at the six marks without reading the names. Which one was made with an almost dry brush? How do you know?

● YOUR TURN

- 1 Dab the tip of your brush ten times on the paper.
- 2 Drag the side of the brush in one long stroke.
- 3 Squeeze the water out and scrub a rough patch.
- 4 Which of your three marks feels roughest?
- 5 Paint a patch of grass using dabs only.
- 6 Paint water using drags only.

Your turn, and painting together

Choose a mark for each thing, then test it.

THE THING	THE MARK I CHOSE	DID IT WORK?
bark		
leaves		
water		
fur		

● YOUR TURN

- 1 Fill in the chart above, testing each mark as you go.
- 2 Paint a tree using two different marks.
- 3 Paint fur using tiny flicks of a thin brush.
- 4 Order your marks from smoothest to roughest.
- 5 Swap with a partner. Guess which mark they used.
- 6 Which mark will you use again? Say why.

✦ FROM WILLA'S OWN SKETCHBOOK

Monet sometimes painted the same haystack more than twenty times, because the light kept changing and so did the colour.

□ WHAT YOU WILL NEED

a round brush, a flat brush, paint, a cloth for drying and thick paper

≡ **MAKE IT TOGETHER**

Work in pairs. One of you paints a patch with a hidden mark, then the other tries to copy it exactly. Compare the two. What did the copier have to work out?

WORK SAFELY

Never point a loaded brush at anybody, and wipe the handle before you swap brushes.

UNIT 4 - TOPIC 4.3

Painters who worked in different ways

WARM
YOUR
HANDS
UP

Screw your eyes up until the room goes blurry. What can you still see? What has gone?

● LET US LOOK CLOSELY

Painters have not all worked the same way, and the differences are worth looking at.

Claude Monet painted his own garden in thousands of small dabs of colour. Stand close and it is a mess of spots. Step back and it becomes water and light.

Wassily Kandinsky painted no thing at all: only shapes, lines and colours. A painting of nothing in particular can still make you feel something, which surprised people at the time.

Henri Matisse grew too ill to stand at an easel, so he cut shapes out of painted paper instead and pinned them up. He called it drawing with scissors.

Three painters, three completely different ways of working. Dabs of colour, shapes and lines with no thing in them, and shapes cut from painted paper.

1 Monet

Thousands of small dabs of colour.

2 Kandinsky

Shapes and lines, and no thing at all.

3 Matisse

Shapes cut from painted paper.

■ WATCH ME TRY 3

How do I paint a tree the way Monet did?

- 1 Bruno tried painting every leaf. There were far too many.
- 2 He looked at Monet instead: no leaves at all, only dabs of colour.
- 3 So he dabbed three greens next to each other and stepped back.

We found out: dabs of colour side by side become leaves when you step back

The same tree, painted two ways. On the left every leaf is described. On the right the whole tree is a few patches of colour. Stand back from the page and look again.

□ HOW DO YOU KNOW?

Stand close to a painting made of dabs, then walk backwards. When does it stop being spots? How do you know why that happens?

● YOUR TURN

- 1 Paint a tree using dabs of colour only.
- 2 Step back five paces and look at it again.
- 3 Paint the same tree using flat shapes only.
- 4 Paint a picture of nothing at all: shapes and colour.
- 5 Does your shape painting make you feel anything?
- 6 Which of the three ways did you like working in best?

Your turn, and painting together

Kandinsky thought colours had feelings. What do you think?

WHAT IT SAYS TO ME	MY COLOUR
loud and warm	
quiet and cool	
bright and light	
strange and deep	

● YOUR TURN

- 1 Choose one colour for how you feel today. Say why.
- 2 Paint a shape painting using only two colours.
- 3 Give your shape painting a name.
- 4 Order your three tree paintings from calmest to busiest.
- 5 Show a partner. Ask what your shape painting feels like.
- 6 Name one painter, and say how they worked.

□ WHAT YOU WILL NEED

paints, two brushes, paper and space to step back and look

≡ MAKE IT TOGETHER

Work in threes. Each of you paints the same view a different way: one in dabs, one in flat shapes, one in shapes only. Pin all three up. Which one tells you most about the view?

▲ STUDIO CHALLENGE

Paint a picture with no thing in it at all, that still makes somebody guess how you were feeling.

**Painting with shapes instead of things**

for the class, on the board

tate.org.uk, how to paint like Kandinsky

**The artist who cut his paintings out**

for the class, on the board

tate.org.uk/kids, who is Henri Matisse

**WORK SAFELY**

Look where you are walking when you step back from your work.

UNIT 4 - TOPIC 4.4

Painting in layers

● LET US LOOK CLOSELY

A **layer** is one coat of paint, dried before the next one goes on top.

Waiting is the whole skill. Paint a pale wash and let it dry properly, and the next colour sits cleanly on top of it. Paint on it while it is still wet, and the two run together into mud.

You can put other things in the layers too: torn paper, pencil, a print. Using more than one material in one picture is called **mixed media**.

Pale layers first, dark ones last. It is easy to paint dark over pale, and nearly impossible the other way round.

○ DO YOU REMEMBER?

You painted a tree three different ways. Which way had to dry before you added anything?

Four layers, and the waiting is the hard part. A pale wash over the whole paper, then a test of the edge to see whether it is really dry, then torn paper or a deeper colour, and pencil last of all.

■ WATCH ME TRY 4

Why did my second layer turn to mud?

- 1 Rufus painted a blue wash, then painted red on it at once.
- 2 The two colours ran into each other and went brown.
- 3 He tried again and waited until the blue was completely dry.

We found out: a layer must be dry before the next one, or the colours run together

One wash, then a second across it. Look at the band down the middle where the two overlap: a third colour has appeared there that neither pot contained.

□ HOW DO YOU KNOW?

Willa painted her second layer straight away and the colours ran together. How do you know when a layer is dry enough?

● YOUR TURN

- 1 Paint a pale wash across your whole paper.
- 2 Wait until it is dry. Do something else meanwhile.
- 3 Paint a deeper colour across one half of it.
- 4 Where the two overlap, has a third colour appeared?
- 5 Glue a piece of torn paper onto the dry paint.
- 6 Draw on top of everything with a pencil.

Your turn, and painting together

Three steps are painted. Mix the last two yourself.

● YOUR TURN

- 1 Paint the two empty squares above, each deeper than the last.
- 2 Paint something pale, and something dark on top of it.
- 3 Now try dark first, then pale on top. What happens?
- 4 Order your layers from palest to deepest.
- 5 Count the layers in your picture. Say what each one is.
- 6 Say which layer you would leave out next time.

□ WHAT YOU WILL NEED

paints, a flat brush, torn paper, glue, a pencil and thick paper

≡ MAKE IT TOGETHER

Work in pairs and make one picture together, taking turns to add a layer. You may not add yours until your partner's is dry. How many layers can you get in one lesson?

WORK SAFELY

Glue and paint both stain, so keep your apron on until everything is dry.

UNIT 4 - TOPIC 4.5

Mixing your own colours

A circular icon with a dark blue background and white text that reads "WARM YOUR HANDS UP".

WARM
YOUR
HANDS
UP

Point to something red in this room. Now something orange.
Which is easier to find?

● LET US LOOK CLOSELY

There are three colours you cannot mix from anything else: red, yellow and blue. They are called the **primary** colours.

Mix any two of them and you get a third colour, called a **secondary**. Red and yellow make orange. Blue and yellow make green. Red and blue make violet.

Now add white. White makes a colour paler, and a whole ladder of paler steps is called a **tone ladder**.

Black is not mixed from the three. It is its own paint, and a little goes a very long way.

Six colours in a ring. The three you cannot mix sit apart from each other, with the colour they make together in between each pair.

■ WATCH ME TRY 5

How do I mix orange when there is no orange in my tin?

- 1 Bruno put a blob of red on his palette.
- 2 He added a smaller blob of yellow beside it.
- 3 He mixed them together with a clean brush until no streaks were left.

We found out: red and yellow mixed together make orange, so no orange is needed

□ HOW DO YOU KNOW?

Rufus says white paint makes a colour deeper. Mix white into red and look. How do you know whether he is right?

One palette, and nearly every colour on it mixed from three. Find the red, the yellow and the blue first. Then find the orange, the green and the violet that came from them.

● YOUR TURN

- 1 Mix red and yellow. Name the colour you made.
- 2 Mix blue and yellow. Name that one too.
- 3 Mix red and blue. Say what you got.
- 4 Add white to your orange. What happened to it?
- 5 Mix a green, then add a tiny bit of red.
- 6 Say which two paints made your favourite colour.

**Watch two colours become a third**

for the class, on the board

bbc.co.uk/bitesize, mixing colours

Your turn, and mixing together

One red, five steps. Add a little more white each time.

● YOUR TURN

- 1 Paint the three empty squares, each one deeper.
- 2 Mix a colour nobody else in the class has made.
- 3 Give your new colour a name of its own.
- 4 Order five of your colours from palest to deepest.
- 5 Willa says a shadow is always grey. Paint one and look.
- 6 Paint a picture using three colours you mixed yourself.

□ WHAT YOU WILL NEED

red, yellow, blue and white paint, a palette, a brush and clean water

≡ MAKE IT TOGETHER

Give every pair only red, yellow, blue and white. See how many different colours the class can mix between you. Line them all up and count. It is usually more than thirty.

✦ FROM WILLA'S OWN SKETCHBOOK

A painter's word for a colour with white in it is a **tint**, and for one with black in it a **shade**.

WORK SAFELY

Rinse your brush in clean water between colours, or every mix turns grey.

UNIT 4 - TOPIC 4.6

Painting a place you have imagined

● LET US LOOK CLOSELY

You do not have to have seen a place to paint it.

Henri Rousseau painted jungles full of enormous leaves and hidden animals. He never went to a jungle in his life. He looked at plants in the park and pictures in books, and made the rest up.

An imagined place still needs real looking behind it. Rousseau's leaves are painted carefully, one in front of another, which is why his jungles feel real even though they are invented.

So look hard at real things, then put them somewhere that does not exist.

○ DO YOU REMEMBER?

You mixed a colour nobody else had. What two paints did you use?

Furthest first, nearest last. That is what makes a flat paper deep. Decide what your place is like and say it out loud, look at real leaves and stones, paint what is furthest away palest, and paint what is nearest last and strongest.

■ WATCH ME TRY 6

How do I make my jungle look deep instead of flat?

- 1 Bruno painted every leaf the same size and the same green.
- 2 It looked like wallpaper, with no space in it at all.
- 3 He painted the far leaves smaller and paler, and the near ones big.

We found out: far things smaller and paler, near things bigger and stronger, makes depth

An invented jungle: layered leaves, and something hiding. Look for the animal first. Then look at the leaves at the back and compare them with the one at the front.

□ HOW DO YOU KNOW?

Rousseau never saw a jungle, but his jungles look real. How do you know careful looking is behind an invented picture?

● YOUR TURN

- 1 Say out loud what is in your imagined place.
- 2 Look at a real leaf before you paint any.
- 3 Paint the furthest shapes pale and small.
- 4 Let that layer dry, then paint nearer leaves on top.
- 5 Hide one animal so it is only half visible.
- 6 Add the nearest leaf last, big and strong.

A jungle painted by someone who never saw one

for the class, on the board

nationalgallery.org.uk, Rousseau, Surprised!

Your turn, and painting together

You have to see a place to paint it.

TRUE

NOT TRUE

Rousseau painted jungles he had never seen.

TRUE

NOT TRUE

Far away things look paler than near things.

TRUE

NOT TRUE

Red and blue mixed together make violet.

TRUE

NOT TRUE

● YOUR TURN

- 1 Tick TRUE or NOT TRUE for the four sentences above.
- 2 Paint a place that could not possibly exist.
- 3 Mix every colour in it from three paints and white.
- 4 Order your shapes from furthest away to nearest.
- 5 Show a partner. Ask them what they can find hiding.
- 6 Give your place a name, and say who lives there.

WHAT YOU WILL NEED

red, yellow, blue and white paint, two brushes, thick paper and one real leaf to look at

MAKE IT TOGETHER

Work in fours and paint one enormous place together on joined sheets. Agree first what kind of place it is. Each of you paints one corner, and the paint must match where the sheets meet.

GO A LITTLE FURTHER

Add something to your place that tells somebody how it feels to be there: rain, or wind, or heat. You cannot paint those, so you will have to think.

WORK SAFELY

Paint on a covered table, and carry wet work flat with both hands.

UNIT 4 - THE PAINT BENCH

Words we used in Unit 4

primary

red, yellow and blue: you cannot mix them

secondary

a colour mixed from two primaries

colour wheel

the colours arranged in a ring

tone

how pale or how dark something is

layer

one coat of paint, dried before the next

mixed media

more than one material in one picture

brush stroke

the mark your hand makes with a brush

wash

thin watery paint spread over the paper

☐ CHECK WHAT YOU CAN DO

- 1 Name the three primary colours.
- 2 Say which two paints make green.
- 3 Explain what white paint does to a colour.
- 4 Say why a layer must dry before the next one.
- 5 Explain how to make a flat paper look deep.
- 6 Say which painter you would most like to have met, and why.

UNIT 4 - THE PAINT BENCH

Look what I can do!

LOOK WHAT I CAN DO!	CONFIDENT	ALMOST THERE	NEEDS MORE WORK
mixing a colour that matches	☐	☐	☐
choosing the right brush mark	☐	☐	☐
waiting for a layer to dry	☐	☐	☐
mixing my own colours from three paints	☐	☐	☐
making a flat paper look deep	☐	☐	☐

- ☐ I can mix the colour I can really see.
- ☐ I can make different marks with one brush.
- ☐ I can name three painters and say how each one worked.
- ☐ I can paint in layers and wait for each one to dry.
- ☐ I can mix a secondary colour from two primaries.
- ☐ I can paint a place I have only imagined.

UNIT 4 - THE PAINT BENCH

Along the way: a painting of somewhere you have imagined

Paint a place that does not exist. You mix every colour you use from just three paints.

□ WHAT YOU WILL NEED

a sheet of paper, red, yellow and blue paint, white paint, a round brush and a jar of clean water

● YOUR TURN

- 1 Think of your place first. Say out loud what is in it.
- 2 Mix three new colours from your three paints.
- 3 Paint the big shapes first, and let them dry.
- 4 Add the small things on top once the paint is dry.
- 5 Mix white into one colour to make a paler version.
- 6 Use that paler colour for whatever is furthest away.

WORK SAFELY

Wash your brush in cool water between colours, never hot.

UNIT 4 - THE PAINT BENCH

Along the way: how it went

Bruno's palette, with the three he started from and the three he made. Find red, yellow and blue on it. The orange, the green and the violet were all mixed on that palette.

□ HOW DO YOU KNOW?

Which colours did you mix, and which two paints made each one?

／ FOR TEACHERS

The three mixes on the chart in topic 4.5 are worth learning by heart, because a pupil who knows them stops asking for a colour and starts making it. Give out red, yellow, blue and white only for at least one lesson: a full tin removes the reason to mix.

Two misconceptions are put in a character's mouth on purpose in this unit, that white deepens a colour and that shadows are always grey. Both are tested with paint rather than corrected in words. Let pupils prove Rufus wrong themselves: an idea a child disproves is an idea they keep.

THE LAST PROJECT

Our own exhibition

All year you have made things. Pots and tiles, drawings and prints and paintings. Most of them are in a drawer.

Now you are going to put them up on the walls and invite people in to look. That is called an **exhibition**.

An artist chooses what to show. You will not show everything: you will choose.

Everything the class made this year, up on the walls at once. Look at the space left round each piece. That space is part of the exhibition too.

□ WHAT YOU WILL NEED

everything you have made this year, string, pegs, card for the labels and a pencil

THE LAST PROJECT

How to put on your exhibition

1 Look

Spread everything you made on the floor and look at it all.

2 Choose

Choose three pieces you want people to see, and say out loud why.

3 Label

Write a small card for each one: what it is, and how you made it.

Two visitors in front of one piece, saying nothing at all. Look at how far back they are standing, and at how long they have been there.

● YOUR TURN

- 1 Spread everything you made on the floor and look at it all.
- 2 Choose three pieces you want people to see.
- 3 Say out loud why you chose those three.
- 4 Write a small card for each one: what it is, and how you made it.
- 5 Peg the flat work on strings, and stand the pots on a table.
- 6 Leave space around each piece, so the eye can rest.

THE LAST PROJECT

Choosing what to show

YOUR FIRST PIECE	YOUR BEST PIECE
THE SURPRISE	

Three mounts. Choose what goes in each one.

● YOUR TURN

- 1 Which three pieces did you choose to show?
- 2 Say why you chose the first one.
- 3 Which piece did you decide NOT to show? Say why.
- 4 Which piece surprised you most when you made it?

▲ **STUDIO CHALLENGE**

Walk round somebody else's three pieces without saying anything. Then tell them one thing you noticed that they did not mention.

! **WORK SAFELY**

Ask an adult before you put anything on a wall, and never stand on a chair to reach.

SHOWING WHAT YOU CAN DO

Look what I can do now!

You started this book not knowing how to build a pot from coils, or why a print comes out the wrong way round. Look how much you can do now.

LOOK WHAT I CAN DO NOW!	CONFIDENT	ALMOST THERE	NEEDS MORE WORK
working with clay	☐	☐	☐
drawing what I can really see	☐	☐	☐
printing from a block	☐	☐	☐
mixing my own colours	☐	☐	☐
talking about my own work	☐	☐	☐

- ☐ I can pinch, roll, flatten and join clay.
- ☐ I can look at something for a long time before I draw it.
- ☐ I can press a block and lift a print off the paper.
- ☐ I can mix a new colour from two paints.
- ☐ I can choose which of my own pieces to show, and say why.
- ☐ I can say what I would do differently next time.

SHOWING WHAT YOU CAN DO

Talking about a piece of work

Artists talk about work all the time, their own and other people's. There are three questions that always help, and they go in this order.

1 What can I SEE?

Only what is really there.

2 How was it MADE?

Which materials, which tools?

3 What do I THINK?

Now you can say.

Ask them in this order. The last one is easy once you have done the first two.

□ HOW DO YOU KNOW?

Choose any piece in your exhibition, yours or a partner's. Answer the three questions about it out loud.

Colours say things too. Which colour would you choose?

WHAT IT SAYS TO ME	MY COLOUR
loud, warm, close to you	
quiet, cool, far away	
bright, light, cheerful	
old, earthy, solid	

／ FOR TEACHERS

This spread is the assessment, and in Art & Design it is done by looking and talking, not by marking. Sit with a group in front of their own exhibition and work through the three questions. What a pupil can SAY about their choices is the evidence.

The three-question order matters more than it looks. Pupils who are asked what they think first will say 'it is good' and stop. Pupils asked what they can see first will still be talking two minutes later.

ART AROUND THE SCHOOL

Making things together

Art does not only happen at your own table. Some of the best things a school makes are made by everybody at once.

The studio at the end of a day when the whole class made something. Look at what is leaning against the wall, and at the table with every tool back in its place.

Here are four things your class can make together this year. Each one uses something you learnt in this book.

WHAT TO MAKE	WHAT IT USES	WHEN
A tiled panel by the door	Unit 1, one tile each	
A printed banner for the hall	Unit 3, one block each	
A wall of painted windows	Unit 4, one painting each	
A book of drawn faces	Unit 2, one portrait each	

WHAT YOU WILL NEED

whatever the class chooses to make, and a wall or corridor to put it on

WORK SAFELY

An adult puts up anything above head height.

ART AROUND THE SCHOOL

Going to look at real art

Everything in this book is a picture of art. Real art is a different thing: it has a size, and a surface, and you can walk up to it.

A painting you have only seen in a book is often a surprise in real life. Some are enormous. Some are smaller than this page. You can see the brush marks, and sometimes you can see where the painter changed their mind.

Go and stand in front of one real painting this year.

1 Walk

Walk round the room once without stopping.

2 Choose

Choose the one piece you keep coming back to.

3 Stand

Stand in front of it for two whole minutes.

What to do in a gallery, which is mostly slowing down. Then say what you can see, and then how it was made.

**A museum to visit in Lisbon**

for teachers and families
gulbenkian.pt, museu

FOR TEACHERS

A gallery visit is worth more than any page in this book, and the nearest great collection to this school is named in the code above. Two minutes in front of one work beats twenty minutes walking past forty.

If a visit is not possible, the museum codes throughout this book all open collections with deep zoom, which lets a class look at brushwork on a screen at a scale no printed plate reaches. It is not the same as standing there, and it is much better than nothing.

NEW WORDS FOR THE STUDIO · 1 OF 3

Every word we learnt

Every studio word in this book, in the order of the alphabet. The name beside each one tells you where you met it.

azulejo

a Portuguese painted tile · Unit 3

block

the thing you press onto the paper · Unit 3

brush

you paint with it · Setting up

brush stroke

the mark your hand makes with a brush · Unit 4

clay

wet earth you can shape · Unit 1

clay tool

for shaping and for scoring · Setting up

coil

a rolled sausage of clay · Unit 1

collage

a picture made from stuck-on pieces · Unit 1

colour wheel

the colours arranged in a ring · Unit 4

fire

to bake clay hard in a kiln · Unit 1

flat brush

for washes and wide marks · Setting up

ink

the colour you print with · Unit 3

insect

six legs, three body parts · Unit 2

layer

one coat of paint, dried before the next · Unit 4

NEW WORDS FOR THE STUDIO · 2 OF 3

Every word we learnt, continued

mirror

the same shape the other way round · Unit 3

mixed media

more than one material in one picture · Unit 4

monoprint

a print you can only make once · Unit 3

outline

the line round the edge of a shape · Unit 2

pencil

for looking and for drawing · Setting up

pinch pot

a pot made with finger and thumb · Unit 1

portrait

a drawing of somebody's face · Unit 2

primary

red, yellow and blue: you cannot mix them · Unit 4

print

a mark made by pressing · Unit 3

repeat

a pattern that goes on and on · Unit 3

roller

it spreads a thin layer of ink · Unit 3

round brush

for lines and for filling in · Setting up

rubber

for changing your mind · Setting up

score

to scratch clay before joining it · Unit 1

NEW WORDS FOR THE STUDIO · 3 OF 3

Every word we learnt, continued

secondary

a colour mixed from two primaries · Unit 4

shadow

the dark side, away from the light · Unit 2

sketchbook

for keeping everything you try · Setting up

slip

runny clay that glues two pieces · Unit 1

sponge

for lifting paint off again · Setting up

still life

a drawing of things that do not move · Unit 2

symmetry

the same on both sides · Unit 2

texture

how a surface feels, or the mark it leaves · Unit 1

tone

how pale or how dark something is · Unit 2

wash

thin watery paint spread over the paper · Unit 4

water jar

for washing your brush · Setting up

BACK OF THE BOOK

Answers

In Art & Design most of what you do has no single right answer, and this book leaves those open on purpose. Some questions do have one, though, and here they are.

Where a question asks you to make something or to say why, there is no answer printed. Instead there is one line saying what a good answer shows, so you can check your own.

Unit 1 - Sculpting with clay

1.1 item 7. A coil is a rolled sausage of clay: **TRUE**. You can join two pieces of *dry* clay together: **NOT TRUE**, they must be damp and scored. Pinching makes the wall of a pot thinner: **TRUE**. Clay comes out of the ground: **TRUE**.

1.4 item 7. Clay comes out of the ground: **TRUE**. Clay gets a little smaller as it dries: **TRUE**. A pot dries best on a sunny windowsill: **NOT TRUE**, it cracks, because one side dries faster than the other. Fired clay is hard for ever: **TRUE**.

Check what you can do. 1 Pinch, roll, flatten and join. 2 Because if one part dries faster than another the two pull against each other and the clay cracks. 3 An adult, never a pupil. 4 The paint, and it must be completely dry first. 5 A good answer names the thing and the mark: a fern leaves thin lines, string leaves a twisted rope, a fir cone leaves rows of little scales.

Unit 2 - Drawing with purpose

2.1 item 1. Six legs, and all six join onto the middle part of the body. A spider has eight legs, so a spider is not an insect.

2.5 item 7. An artist may change how things looked: **TRUE**. A drawing about an event has to be pretty: **NOT TRUE**. Picasso painted *Guernica* about a bombing: **TRUE**. You must copy a photograph exactly: **NOT TRUE**.

Check what you can do. 1 Six legs, joined to the middle body part. 2 About halfway down the head, with the ears level with them. 3 A bright side and a dark side together, plus the shadow it casts. 4 Everything that is not needed to say the one thing it has to say. 5 Pablo Picasso, or any artist a pupil can name and say what event they worked about.

Unit 3 - Introduction to printing

3.5 item 7. A print is made by pressing: **TRUE**. A monoprint can be printed twice: **NOT TRUE**, the first sheet lifts the ink away. A relief block prints many times: **TRUE**. Your teacher cuts the vegetables: **TRUE**.

Check what you can do. 1 A mark made by moving paint or ink from one surface to another by pressing. 2 Because pressing turns the block over onto the paper, so the print is a mirror of the block. 3 By turning the same tile a quarter turn each time, so the corners join up into shapes no single tile carries. 4 Because peeling the paper off takes the ink with it and leaves the tile empty. 5 An adult, because it needs a sharp knife.

Unit 4 - Painting: processes and movements

4.5 items 1 to 3. Red and yellow make **orange**. Blue and yellow make **green**. Red and blue make **violet**.

4.5 item 4. Adding white makes the orange **paler**, not deeper. Rufus is wrong, and mixing it proves it.

4.6 item 7. You have to see a place to paint it: **NOT TRUE**. Rousseau painted jungles he had never seen: **TRUE**. Far away things look paler than near things: **TRUE**. Red and blue mixed together make violet: **TRUE**.

Check what you can do. 1 Red, yellow and blue. 2 Blue and yellow. 3 It makes it paler. 4 Because wet paint runs into wet paint and the two colours turn to mud. 5 Paint the furthest things smaller and paler and the nearest things bigger and stronger. 6 Any of the four painters named in this unit, with a reason.

The open ones

KIND OF QUESTION	WHAT A GOOD ANSWER SHOWS
How do you know?	a reason drawn from something the pupil looked at or tried, not a guess
Your turn , making items	the making was done, and the pupil can say what they changed
Order these	the order is explained, even if it is not the order somebody else chose
Say why	one reason, in the pupil's own words
Look what I can do!	the pupil's own honest mark, which is never corrected by an adult

FOR TEACHERS

About this book

How the book is built. Four units, twenty topics, taken from the scheme of work supplied by the school. Each topic runs to several pages: a looking-and-learning page, then pages of practice. Every topic carries at least twelve practice items, one modelled attempt worked through to a stated finding, at least one *How do you know?* prompt, and at least one plate that SHOWS the making rather than describing it. Every unit ends with a word list, a review, a page for pupils to record what they can now do, and a project.

Why the modelled attempt matters most. At six, watching one thing be made is most of the teaching. Each *Watch me try* panel works a single problem through to a printed result, and it is nearly the only place in this book where an answer is given. Everything else is left open, because in Art & Design a printed answer would often be a printed opinion. The closed questions that do have answers are in the Answers section.

Reflection is the assessment. There is no test in this book and no mark scheme. What a pupil can SAY about their own choices is the evidence, and the three questions on the assessment spread (what can I see, how was it made, what do I think) are the instrument. Ask them in that order: a pupil asked what they think first will say "it is good" and stop.

Safety. Practical work is written for six and seven year olds under direct supervision. Carry out your own risk assessment first and follow your school policy. Three rules are absolute in this book: an adult loads, fires and empties the kiln; no pupil uses a cutting blade, so relief blocks are built up rather than cut away and vegetables are halved by an adult in advance; and clay is sanded damp, never dry, because dry clay dust should not be breathed.

FOR TEACHERS

About this book, continued

Misconceptions this book tackles head on. That a print comes out the same way round as the block, when pressing reverses it (Unit 3). That a monoprint can be printed twice (Unit 3). That clay neither shrinks nor cracks, and that air-drying clay is waterproof (Unit 1). That white paint makes a colour deeper, when it lightens it (Unit 4). That shadows are always grey and the sky is always blue (Unit 4). In each case the wrong idea is named, put in a character's mouth or inside a question, and then tested, because a misconception that is never spoken aloud is never given up.

The square codes. Every code in this book opens a museum collection, a gallery page or a short film, and every destination was fetched and read when this edition went to press. They are addressed to the adult holding the book, or to the whole class with the code on the board, because nobody in Year 2 owns a phone. The address is printed in words beside every code, so a page still works with no device at all.

The apron goes on before anything else. Look at the brushes standing in its pocket and the cloth over the hook beside it. Everything a pupil needs is on one peg.

／ FOR TEACHERS

The two front-matter pages on setting up and looking after tools are worth a full lesson before Unit 1. Pupils who put their own brushes away correctly in September still have brushes that hold a point in Unit 4, and the difference in their painting is visible.

Keep everything, including the failures. The final project is an exhibition the pupils curate themselves, and choosing what NOT to show is half of what it teaches. A drawer of a whole year's work is what makes that choice real.

Art & Design

Year 2 · Student Manual

Come into the studio by the wood, where a hedgehog in a clay-stained apron and a bear in a paint-spotted smock are busy making things.

Twenty subunits of real Art & Design, for children of six and seven. Pinch a pot out of one lump of clay. Draw a beetle so carefully you can count its legs. Press a block and lift a print off the paper. Mix two paints and find a third.

Every subunit asks the question that matters most: how do you know?

INSIDE THIS BOOK

- Twenty subunits across four units
- Over 240 things to make, say and draw
- A modelled attempt in every single subunit
- Four projects, and a class exhibition to finish
- Original watercolour illustration throughout
- Museum codes that open real collections
