

Physical Education

Year 5

Student Manual

Physical Education

Year 5 • Student Manual

A student book for Upper Primary, written for pupils of about nine to ten years old. Year 1 played in the open meadow. Year 2 played on a marked court. Year 3 stepped onto a measured cinder track. This year the six of you walk up to the long field, where the grass is mown, the strips are pegged out in white rope, and there is a pavilion to sit on when it is your turn to watch.

Six places, one field: the Practice Strip, the Pavilion Steps, the Orchard, the Match Ground, the Equipment Barn and the Beacon Path. You will take four jobs in turn, and one of them is new this year.

A movement is not one thing. It is several things joined up, and the joins are where the work is.

Physical Education • Year 5

Student Manual. First edition, 2026.

Prime Books is the publishing imprint of Prime School, Portugal.

Editorial Board. The Prime Books Subject Series has been developed under the guidance of the Pedagogical Academic Group for each subject and coordinated by the Pedagogical Team of Prime School.

This publication reflects our shared commitment to academic excellence, educational quality, professional integrity, and the continuous advancement of teaching and learning. Through the collective expertise and dedication of our educators, we aim to provide meaningful and engaging learning resources that support students' academic growth.

We extend our sincere appreciation to the Pedagogical Department and the Content Creation Team of Prime School for their invaluable contributions, dedication, and collaborative efforts in making this publication possible.

Text, design and illustration. Written and designed by the Prime Books editorial studio. Original watercolour illustration produced for Prime School. All illustrations © Prime School 2026. The Prime School device is composited from the original artwork and is never redrawn.

Safety, and it is not a formality. This is a Physical Education book, so almost every task moves a body through a space. Every task assumes a teacher present, a space checked before the lesson, and apparatus set out and tested by an adult. The teacher carries out their own risk assessment and follows the school's safety policy. Where a task carries a particular risk, the book says so on the page in a magenta **Stay safe** panel. Those panels are instructions, not advice.

Square codes. Both square codes in this book were scanned, and both addresses were opened and read, when this edition went to press. An adult holds the device and opens the page. Pages outside Prime School's control may move or close, and Prime School is not responsible for their content.

Inclusion. Every comparison in this book asks a pupil to look at their own earlier attempt. No task ranks one pupil against another, and no task requires a particular body in order to succeed. Teachers adapt distances, heights and timings freely: the objective is control, not size or speed.

British English throughout. Measurements are metric, times are on the 24 hour clock, and money is in euros. Printed in Portugal on paper from responsibly managed forests.

Come out to the long field

You already know how to run, jump, land, throw, catch and travel. You have been doing all of it since Year 1, and by now you do most of it without thinking.

This year we are going to make you think about it, once, on purpose, and then let you stop thinking about it again.

Here is the idea the whole book turns on. **A movement is not one thing.** A throw is a stand, then a reach, then a release, then a finish. A jump is a run up, then a take off, then a flight, then a landing. Every one of those parts can be practised on its own, and every place where two parts meet is a **join**.

Most pupils in Year 5 are already reasonably good at the parts. Almost nobody is good at the joins. That is where this book spends its time.

The long field before anybody arrives. Mown grass, one strip pegged out in white rope, the pavilion waiting with its three steps, the stone wall and the orchard beyond. Look at the rope: nearly everything in this book happens because somebody decided where a line should go.

What is different about Year 5

In Year 3 the useful answer was *I can jump*. This year it sounds more like this:

I can land my jump without a wobble, I can go straight from the landing into a turn without stopping, I can do the whole thing slowly if you ask me to, and if somebody

steps into my space halfway through I can change it without falling over.

Same jump. Far more control, and much more useful.

How the book is built

Six places on and around the long field, one for each unit. Each one is there for a reason.

THE LONG FIELD • SIX PLACES, ONE PER UNIT

- 1 **The Practice Strip.** Practising until a skill changes, joining skills into sequences, controlling speed, level and path, and adapting when the task or the friends around you change.
- 2 **The Pavilion Steps.** Where you sit and watch. Words for what a body actually did, and how to judge whether it worked.
- 3 **The Orchard.** Long grass and no lines at all. Movement nobody showed you, and movement that says something.
- 4 **The Match Ground.** Rope and teams. Your job, everybody else's job, and taking a turn at leading.
- 5 **The Equipment Barn.** Sharing a space and a set of equipment safely, fair play, and how to ask for help well.
- 6 **The Beacon Path.** The long climb behind the orchard. What is happening inside you while you move, and what a working body needs.

Six places, one year. You will work all of them.

About this book

This student book is for **Year 5 Physical Education** at Prime School, written for pupils of about **nine to ten**. It sits after Years 1 to 4: those years taught you to move. This year teaches you to **look at a movement**, refine one part of it, and then use that control in games, in invented phrases, in a team job, and in looking after your own body.

You will practise technique (the parts and the joins), coordination, agility, speed and endurance, and you will learn simple fitness language you can use on the field. You will also practise teamwork, communication, decision-making, leadership, personal responsibility and fair play. The book stays a PE book: it is not a specialist sports manual and it is not a health textbook.

Each unit opens on its own place on the long field. You write in the pale boxes. You watch as much as you move. You are compared only with your own last attempt.

Your year on the long field

Three terms, and each one finishes with a whole day on the field. You will meet every one of these days having already practised the parts it is made of, which is the point of working the way this book works.

TERM 1 ENDS Athletics Day December 2026 ● Sprint ● Relays ● Standing long jump ● Target throw ● Obstacle race	TERM 2 ENDS Football Day March 2027 ● Dribbling in and out of the cones race ● Passing accuracy game ● Penalty shootout ● Full game	TERM 3 ENDS Multi-sports Day June 2027 ● Bowling ● Sack racing ● Bean bag throw ● Cup target toss
--	--	--

Where the year takes you

Read the three cards again. The days sit on top of the whole book, not only Unit 1.

THE DAY	WHAT THE BOOK GIVES YOU FOR IT
Athletics Day, term 1	Unit 1 takes the jump and the throw apart. Unit 6 names the joints and the intensity of a sprint and a long effort.
Football Day, term 2	Unit 1.3 is the cone dribble. Unit 2 is pass, move and space. Unit 4 is the team job. Unit 5 is the honest call.
Multi-sports Day, term 3	Unit 3 is the unfamiliar movement. Unit 4.6 is the striking-and-fielding plan. Unit 6.5 is the warm-up that matches the event.

Every one of those days rewards the same habit: choose one part, change it on purpose, and check with a watcher whether the whole thing got better.

Meet the six

The same six as last year, a year older, and all six of them turn up all through this book, usually getting something slightly wrong first.

Pip

Red squirrel, sage vest and navy shorts. First to try anything, and he will try it before the instruction has finished. He is finding out this year that his quickest attempt and his best attempt are not the same attempt.

Bramble

Badger, slate tracksuit, stopwatch on a chain. Strong and steady and he never rushes. He is learning the difference between surviving a landing and controlling one.

Sorrel

Brown hare, olive vest. The fastest of all of them by some distance. This year she finds out that speed is one dynamic among several, and that it is not always the one the task is asking for.

Tuft

Hedgehog, terracotta vest. The smallest and the most careful, and he reads a space before he moves into it. His job this year is harder than it sounds: changing a movement on purpose instead of only repeating it.

Rowan

Otter, hedge-green vest. The organiser. Give him four jobs and six friends and everybody ends up busy. He is learning to take a job himself rather than hand them all out.

Willow

Barn owl. The watcher. She sits up on the pavilion rail because from there she can see the whole shape of a movement instead of just the end of it. She is the reason this book keeps asking you to say what you *saw* rather than whether you liked it.

None of the six is better than the others. Each is good at a different thing, which is exactly how a class works, and it is why the tasks keep making you swap jobs.

Willow, working. She is the one sitting still, and she is the busiest of the six. Look at where she is looking: out at the mover, not down at her notebook. A watcher who writes while the movement is happening misses the movement.

When you see a slate panel headed **Willow's own notes**, that is Willow writing down exactly what one body did. Copy the way she says it, not only what she says.

Four jobs, and you will do all four

Almost every task in this book needs three or four of you, because you cannot watch yourself move. Three of these jobs you already know from Year 3. The fourth is new.

JOB	WHAT YOU DO	WHAT YOU MUST NOT DO
Mover	Do the movement properly, as many times as the task says	Rush it to look quick, or quietly change it halfway through
Timer	Count, or time, and say the number out loud	Guess, start the watch early, or round the number kindly
Watcher	Look at one part only, and say what you saw	Say "good", which tells the mover nothing at all
Caller	Change the task while it is running, out loud, once	Change it twice, or change it to something unsafe

The Caller is the new one, and it is the whole reason Unit 1 has a fourth topic. A movement you can only do when nothing changes is not yet under your control.

Where you stand matters as much as which job you hold. Here are all four of them at once, on one strip.

The four jobs, all on one strip. Pip is the mover. Bramble is at the far end with the stopwatch, watching Pip rather than the watch. Rowan is off the strip halfway along with an arm up, because that is where a call can be heard in time. And Willow is the only one off the grass and above it, because the shape of a whole movement is only visible from up there.

Swap jobs every round. The watcher's job is the one most of you are worst at, and it is the one that makes you better at the other three.

How to use this book

Every place on the field is built the same way, so once you know the shapes you always know where you are on a page.

SHAPE	WHAT IT MEANS
Come out to the field	A question to talk about before you move. There is no wrong answer yet.
What happened	The real problem for this topic. Everything after it is you sorting that out.
On this ground you will	What you will be able to do by the end. Come back and check.
Warm up	Two minutes, straight in, and it is never optional in this subject.
Do you remember?	Something from an earlier year that you are about to need again.
Learn	The drawing and the new idea. Read the drawing first, then the words.
Watch one done well	One attempt taken slowly, with a reason given for each part.
Try it the other way	A second method, because one method is a trick rather than a skill.
Your turn	Your work. Move first, then write, draw and tick in the book.
Willow's own notes	What Willow actually wrote down. A model for your own notes.
Stay safe	Magenta. An instruction, not a suggestion. Read it before you move.
What you need on the field	Fetch this before you start, so nobody stands about waiting.
Did you know?	A true thing worth knowing that is not in any test.
Go a little further	For when you have finished and want more.
Field challenge	Harder. Expect to need three attempts.
The long field games	The project at the end of the place.
How did it go?	You judging your own work, honestly.
Look what I can do	The tick list. Only tick what is true today.
Words we used	Every new word, with its meaning.

Phase strips

The drawing this book uses most is a **phase strip**: a movement cut into its parts, in order, left to right. Here is one, so that you have seen a phase strip before the first one turns up in a lesson.

PHASE STRIP • A STANDING JUMP, AS AN EXAMPLE

1 Sink knees bend, arms swing back behind you	2 Drive legs straighten hard, arms swing forward and up	3 Flight both feet off the grass, body long	4 Land both feet together, knees bend again, and you stop still
--	--	--	--

Four parts, three joins. You have been doing all four since Year 1. What you have probably never done is choose one of them and work on it by itself.

Look at the narrow cream gaps between the blocks. **Those gaps are the joins**, and they are the thing you are working on. A pupil who can do all four blocks and none of the gaps has four movements. A pupil who can do the gaps as well has one.

Plan panels and elevations

A **plan panel** is the field seen from directly above, the way Willow sees it from the pavilion rail. An **elevation** is the same ground seen from the side, which is the only way to show height. The marks always mean the same thing, in every unit:

MARK	MEANS
a solid white rope line	a boundary you may not cross
a dashed white line	the path a body travels
a white ring	where a body starts, or stops
a white cross	a cone, a marker or a peg
a filled dark circle	a body, at one moment
the ticks down the left edge	metres, counted

Writing in this book

You are meant to. The pale boxes, the ruled lines and the timing tables are yours. Use a pencil, because your second attempt is usually a different number from your first, and

that is the entire point of the book.

The square codes

Two pages carry a small square code. Each one opens a page that offers your teacher more routes and more games than this book has room for. **An adult holds the device and opens the page.** There is nothing in this book you cannot finish without one.

Getting set up

You do not need everything at once. Each place on the field tells you what to fetch.

Your field kit

- soft indoor shoes, or bare feet, whichever your teacher says for the space
- a stopwatch, or one clock everybody can see
- eight cones, or eight of anything that stands up and does not roll away
- two skipping ropes
- one ball that bounces, and one that does not
- a measuring tape, or a metre stick
- a notebook, or something firm to write on while standing up
- a pencil, because half of this book gets written in
- five other people, which is the most important item on the list

Your kit, laid out. Nothing here needs a screen. Count it against the list above: shoes, a watch, five cones, a rope, a ball, a folded cloth, a notebook and a pencil. The notebook does more work in this unit than the ball does.

Field rules

- 1 Walk onto the field. Everybody walks on, every time, however exciting it is.
- 2 Look before you move. Then look again if somebody else is already moving.

- 3 One mover at a time inside a roped strip, unless the task says otherwise.
- 4 The timer says the number that is on the watch, not the number that would be kind. A kind number is a useless number, and Unit 1 explains why.
- 5 A watcher says what they **saw**, never whether it was good.
- 6 The Caller changes the task once, clearly, and never to anything unsafe.
- 7 Put the equipment back in the barn, at the end, without being asked.
- 8 Stop the moment you hear "stop". Not after this one. Now.
- 9 An adult holds the device for any square code.

STAY SAFE

Before anybody moves, check three things and say them out loud:

The grass. Dry enough, clear, nothing to trip on and nothing hidden in it.

The edges. Nothing hard within two paces of any rope you might run past.

The apparatus. Every bench, mat and piece of equipment carried out and tested by an adult, not by you.

If any of the three is wrong, you tell an adult and you do not begin.

1 Moving well

A movement is several things joined up. This unit takes one apart, makes each part better, and then puts it back together so the joins do not show.

✓ ON THIS GROUND YOU WILL

1.1

practise one part of a skill on purpose, and say what changed

1.2

join three or four skills into a sequence with no stop at the joins

1.3

perform the same skill at different speeds, levels and paths, deliberately

1.4

keep that control when the task changes and when other people move first

○ COME OUT TO THE FIELD

Think of one thing your body does well. Catching a ball. Skipping. Running round a bend without slowing down.

Now the harder question. **Which part of it are you good at?**

Almost nobody can answer that, because a movement you can already do feels like one single thing. It is not. Every movement you have is made of parts, and you got good at it without ever seeing them.

On this ground you are going to see them.

UNIT 1 - TOPIC 1.1

Practise that changes a skill

■ WHAT YOU NEED ON THE FIELD

One ball each, a wall you are allowed to throw at, five cones, a stopwatch, a notebook and a pencil. Work in fours.

✦ WARM UP

Jog anywhere in the space for ninety seconds, changing direction every time you meet somebody, without touching anybody. Then swing each arm forward five times and backward five times, and rise onto your toes ten times.

Now stand still. You are warm, your shoulders are loose and your ankles are awake. Cold practice is wasted practice.

Fifteen throws at the stone wall, and Willow counting. She is not waiting her turn: counting is a job, and on this ground it is the job that tells the thrower whether anything changed.

◆ WHAT HAPPENED

Pip is throwing a ball at a wall. He throws it thirty times, which takes him about four minutes, and he is pleased with himself.

Willow has been watching from the pavilion rail with her notebook. She says: "That was one throw, thirty times."

Pip says that is the same as thirty throws.

It is not, and the difference between those two sentences is what this whole topic is about.

🕒 DO YOU REMEMBER?

*In Year 3 you learned that a **smooth** movement has no wasted wobble, no extra step and no arm shooting out to save it. You are going to need that word again in about a minute.*

► Learn

Doing a movement thirty times is not practising it. It is **repeating** it.

Practice means repeating a movement *with one part you are trying to change*. Without that part, you are keeping fit, which is fine, but nothing gets better.

Three things make a practice work, and if any one is missing the other two are wasted.

IT MUST HAVE	WHICH MEANS
One part to change	Not "throw better". "Get my elbow above my shoulder before the ball leaves my hand."
A way to tell	A watcher looking at that one part, or a number from the timer. Not a feeling.
Enough goes	Three attempts tell you nothing at all. Fifteen start to tell you something.

So before you can practise a skill, you have to be able to see its parts. Here is an overarm throw, taken apart.

PHASE STRIP 1.1 • THE OVERARM THROW

1 Stand side on to the wall, feet apart, weight on the back foot, ball in your throwing hand	2 Reach throwing arm back and high, elbow above the shoulder, other arm pointing at the target	3 Release weight moves onto the front foot, arm comes through fast, the ball leaves high	4 Finish throwing arm carries on down and across the body, and you stay on your feet
---	---	---	---

Four parts, and three joins: 1 into 2, 2 into 3, and 3 into 4. Pip has all four parts. What he has not got is the join from 2 into 3, which is why the ball arrives low.

Now read the phase strip again and notice something. **You cannot practise a throw.** A throw is too big to practise. You can only practise **one phase, or one join**, and then check whether the whole throw changed.

That is why Willow was right. Pip repeated the whole throw thirty times, so none of the parts got any attention and none of them changed.

■ WATCH ONE DONE WELL

Tuft practises the join from 2 into 3. He does not throw at all for the first few goes.

- 1 He stands side on, gets to the end of phase 2, and **stops there**, holding it, with his elbow above his shoulder. Willow checks the elbow and says yes or no. Six times.
- 2 Then he does phases 2 and 3 together, slowly, at about half speed, so the weight moves onto the front foot *before* the arm comes through. Six times.

- 3 Only then does he throw properly, at full speed, fifteen times, while Willow watches the elbow and nothing else and calls out "above" or "below".

His first fifteen throws that morning: nine of them low. His last fifteen: three of them low.

Notice what he changed. He did not throw harder and he did not throw more. He took one join out, worked on it slowly, and put it back.

* THE WATCHER'S NOTES

Pip, throws 1 to 10. Elbow below the shoulder every time. Ball hits the wall low, about knee height. Front foot never moves.

Pip, throws 21 to 30. Elbow below the shoulder every time. Ball hits low every time. Front foot never moves.

Nothing changed between throw 1 and throw 30.

Look at what Willow wrote and, more importantly, at what she did not write. She did not write "Pip needs to try harder", and she did not write "not very good". She wrote **what she saw**, in the same words each time, so the two sets can be compared.

That is the whole job. A watcher who says "good" has given the mover nothing to work with.

• Your turn

Work in fours: mover, timer, watcher, and one to fetch the ball. Swap after every round so that everybody does all four jobs.

- 1 Choose **one phase or one join** from the strip above. Write it in the box, in the same style Willow uses: what a body part does, not how well.

THE ONE PART I AM CHANGING

- 2 Throw fifteen times while your watcher looks at that one part only, and nothing else. Tally what the watcher calls.

ROUND	PART THE WATCHER IS LOOKING AT	YES	NO
First fifteen	_____	_____	_____
After you have worked on it	_____	_____	_____

- 3 Now take the part out and work on it slowly, the way Tuft did. Do it six times at half speed, holding the position if you can. Then throw fifteen more times.
- 4 Write the two numbers side by side and finish this sentence honestly.

WHAT CHANGED, AND HOW I KNOW

- 5 One more, and it is the difficult one. Your watcher now looks at the **whole throw** and says whether the ball is arriving higher. If your one part got better and the whole throw did not change at all, that is a real and interesting result. Write it down rather than hiding it.

DID THE WHOLE THROW CHANGE?

✦ DID YOU KNOW?

The NHS recommends that children and young people aged 5 to 18 "aim for an average of at least 60 minutes of moderate or vigorous intensity physical activity a day across the week".

Read the next part of the same guidance, though, because it is the part that belongs in this unit. It asks for "a variety of types and intensities of physical activity across the week to **develop movement skills**, muscles and bones".

Not just more minutes. A variety of them. Which is precisely what topic 1.3 is about.

→ GO A LITTLE FURTHER

Try the same three step method on a skill nobody has taken apart for you: a chest pass, an underarm serve, or a standing jump.

Write your own phase strip for it first, on paper, before you move. Four boxes and three joins. If you cannot name the parts, you cannot practise them, and finding that out is useful in itself.

UNIT 1 - TOPIC 1.2

Joining skills into a sequence

■ WHAT YOU NEED ON THE FIELD

One low bench, two mats, six cones, a stopwatch and a pencil. Work in fours. An adult sets out the bench and the mats.

✦ WARM UP

Travel across the space and back four times, using a different way each time: running, side steps, long slow strides, and skipping. Then stand on one foot for ten seconds, and the other foot for ten seconds.

One sequence, three friends, three phases. Read the picture left to right: Sorrel finishing her run, Tuft at the top of the jump with both arms level, and Rowan holding the balance on one foot. Now look at the two gaps between them. Those are the joins.

◆ WHAT HAPPENED

Bramble has been given three skills to join: a run, a jump onto and off a low bench, and a still balance on one foot at the end.

He can do all three. He is easily the best in the class at the jump.

What he actually does is this: run, **stop**, get himself sorted out, jump, **stop**, get his balance ready, balance. Rowan times it at nine seconds. Bramble says he did all three, and he is right.

Willow writes down: *three movements, two stops.*

► Learn

A **sequence** is two or more skills performed one after another with no stop in between. The skills are not the hard part. **The joins are the hard part**, and a sequence is judged on them.

Here is Bramble's sequence as a phase strip. The cream gaps are the joins.

PHASE STRIP 1.2 • RUN, JUMP, BALANCE

1 Run five or six strides, building up, eyes on the bench	2 Jump up onto the bench, along it, and off the end, landing on two feet	3 Balance straight out of the landing onto one foot, arms out, held for three seconds
--	---	--

Two joins. Join 1 into 2 is where Bramble stops to get himself sorted out. Join 2 into 3 is where almost everybody stops, because a landing feels like an ending.

Two things make a join work, and they are both about **the end of the first skill** rather than the start of the second one.

TO JOIN TWO SKILLS	YOU HAVE TO
Finish the first one facing the right way	A landing that faces away from the bench cannot become a balance without a shuffle. Decide where you will be pointing before you start.
Finish the first one at the right speed	You cannot go from a full sprint straight into a still balance. Take the speed off during the last two strides of the run, not after it.

That second one surprises people. A join is usually fixed **earlier** than where it goes wrong. Bramble's stop at join 2 into 3 is actually caused by how fast he is still travelling at the end of phase 1.

Here is the same sequence seen from above, so you can see where the facing matters.

PLAN 1.2 • THE SAME SEQUENCE, SEEN FROM ABOVE

Look at the arrow at the far end. The balance is held facing the same way the run was travelling. Nothing in the sequence turns round, which is why nothing in it needs a shuffle.

■ WATCH ONE DONE WELL

Bramble fixes join 2 into 3, by changing phase 1.

- 1 First he tries the obvious thing: land, then balance faster. It does not work. He is still travelling forwards when he lands, so he has to put the second foot down to stop.
- 2 Rowan suggests he take two strides off the run up. Bramble hates this, because it makes the jump smaller.
- 3 He tries it anyway. The jump is smaller. The landing is slower. The balance comes straight out of it with no second foot.

Timed: nine seconds before, five and a half seconds after, and no stops.

The lesson is the awkward one. To fix the last join, he had to make the part he was proudest of smaller.

● **Your turn**

Work in fours and swap jobs each round.

- 1 Build your own three part sequence from these: a travel, something onto or over the bench, a turn, a still balance, a roll along a mat. Write your three parts in order.

MY SEQUENCE

1 _____	2 _____	3 _____
----------------	----------------	----------------

And now name your two joins: 1 into 2, and 2 into 3.

- 2 Perform it three times. Your timer times the whole thing, and your watcher counts **only the stops**.

ATTEMPT	TIME IN SECONDS	STOPS THE WATCHER COUNTED
First	_____	_____
Second	_____	_____
Third	_____	_____

✦ DID YOU KNOW?

Ground rule 4 said the timer says the number that is on the watch, not the number that would be kind. Here is why it matters, now that you are using a stopwatch properly for the first time.

A timer who quietly takes a tenth of a second off to be nice has not been kind: they have thrown away the only evidence the mover had that their practice worked. Numbers are how you find out whether anything changed. **A kind number is a useless number.**

- 3 Choose **the worse of your two joins** and write down what actually happens there. Not "it goes wrong": what your body does.

WHAT HAPPENS AT MY WORSE JOIN

- 4 Now change something **before** it, the way Bramble did, and run the sequence three more times.

AFTER THE CHANGE	TIME IN SECONDS	STOPS
First	_____	_____
Second	_____	_____
Third	_____	_____

- 5 Draw your sequence as a plan, seen from above, in the box. Mark the start ring, the route as a dashed line, the equipment as crosses, and put an arrow at the end to show which way you are facing.

MY SEQUENCE, SEEN FROM ABOVE

STAY SAFE

The bench and the mats are set out and tested by an adult, not by you. Check three things out loud before your first attempt:

Landing area. A mat where you land, flat, with no gap between two mats.

Run up. Clear, and nobody crossing it. One mover at a time.

Bench. Both feet of the bench on the floor, and it does not rock when you push it.

If the sequence has a roll in it, an adult watches every attempt.

■ SCAN TO FIND OUT MORE

Sixty second challenges. Short movement challenges you repeat and measure against your own last attempt, which is exactly the method in topic 1.1 applied to a whole class at once. Your teacher can pick one that fits the space you have.

AN ADULT HOLDS THE DEVICE AND OPENS THE PAGE

▲ FIELD CHALLENGE

Four parts, two seconds faster, no stops.

Add a fourth skill to your sequence, so it has three joins instead of two. Then get the whole thing two seconds faster than your best three part time, with the watcher still counting zero stops.

You are allowed to make any single part smaller in order to do it. Most people have to.

UNIT 1 - TOPIC 1.3

Control, fluency and variety

■ WHAT YOU NEED ON THE FIELD

Six cones, one ball, a stopwatch, a measuring tape or metre stick, and a pencil. Work in fours.

◆ WARM UP

Travel from one side of the space to the other and back, three times: once as quickly as you safely can, once as slowly as you possibly can without stopping, and once staying as low as you can the whole way. The slow one is the hardest. Notice that.

Sorrel travelling the same distance twice, two different ways. On the left she is upright and fast. On the right she is low and slow, curving round the cone. Neither is wrong. The question this topic asks is whether you can choose.

◆ WHAT HAPPENED

Sorrel is the fastest in the class. The task is to travel twelve metres in a curved path, slowly and low.

She does it fast and upright, because that is what her body does. Rowan asks her to do it again, slowly. She does it slightly less fast and slightly less upright.

She is not being difficult. She genuinely cannot find slow, because she has never practised it. Fast is the only setting she has.

► Learn

Control means your body does what you decided it would do. **Fluency** means it does it without stopping or wobbling. **Variety** means you can decide differently next time.

You need all three, and the third one is the one most people are missing. A pupil with one setting has a trick. A pupil with four settings has a skill.

There are three dials you can turn on almost any movement, and only three.

DIAL	SETTINGS	A QUESTION THAT FINDS IT
Speed	fast, slow, and speeding up or slowing down as you go	Could you do that at half the speed and still make it look deliberate?

DIAL	SETTINGS	A QUESTION THAT FINDS IT
Level	high, medium, low	Could you do that with your knees bent the whole way?
Path	straight, curved, zigzag	Could you get there without travelling in a straight line?

Turn one dial and you have a new version of the same skill. Turn two and it barely looks like the same skill at all, which is the point.

ELEVATION 1.3 • THE LEVEL DIAL, SEEN FROM THE SIDE

Follow the dashed lines across. Three bodies, one ground line, three different head heights. Low is not crouching at the end: it is staying down for the whole distance, which is far harder work than it looks.

🕒 DO YOU REMEMBER?

*In Year 3 you did the same movement fast, slow, high and low. This year there is a fourth dial setting inside speed: **changing speed on purpose while you travel**, which is what a real game asks for.*

⇌ TRY IT THE OTHER WAY

Sorrel cannot find slow by being told to go slower. So try the other way in: **give the movement something to be slow for.**

Method one, the one that does not work. "Sorrel, do it slowly." She goes slightly less fast.

Method two. Put a cone every two metres along the twelve metre curve, and give her a rule: **you must touch the ground beside each cone with one hand as you pass it.** Do not mention speed at all.

She now travels the twelve metres low and slowly, because the task cannot be done any other way. Then Rowan takes the cones away and asks her to do exactly what she just did. This time she can find it.

The principle is worth keeping: if a pupil cannot find a dial setting by being told, **change the task so that the setting is the only way to finish it.**

• Your turn

- 1 Choose one way of travelling: running, side stepping, skipping, or a bounce and catch as you go. Write it down. This is your skill for the whole task.

MY SKILL

- 2 Perform it over twelve metres four times, turning one dial each time. Your timer times each one and your watcher writes down one thing they actually saw.

VERSION	TIME IN SECONDS	WHAT THE WATCHER SAW
As you normally do it	_____	_____
Slow, and deliberate	_____	_____
Low, the whole way	_____	_____

VERSION	TIME IN SECONDS	WHAT THE WATCHER SAW
Curved path, not straight		

3 Draw the four versions as four plans seen from above. Same skill in each box, so the only thing that changes between them is the dial.

NORMAL	SLOW
LOW	CURVED

4 Which version was hardest? It is almost never the fast one. Write which, and why you think so.

HARDEST VERSION, AND WHY

5 Now the useful question, and it is the one the whole unit has been building to. Think of a moment in a real game where **each** of your four versions would be the right choice.

VERSION	A MOMENT WHEN THIS IS THE RIGHT CHOICE
Normal	
Slow	

VERSION

A MOMENT WHEN THIS IS THE RIGHT CHOICE

Low

Curved

✦ DID YOU KNOW?

One lap of a standard outdoor athletics track is **400 metres**, run in a marked lane. World Athletics describes the 400 metres as an event "in which athletes complete one lap of a standard outdoor 400m athletics track while running in a designated lane".

So the twelve metres you have just travelled four different ways is about one thirty third of a single lap. Do the arithmetic the other way round and it is worth knowing: at four versions per twelve metres, one lap would give you well over a hundred goes at turning a dial.

→ GO A LITTLE FURTHER

Turn **two** dials at once: slow *and* curved, or low *and* speeding up as you go.

Then hand your two dial version to somebody who did not see you plan it, and ask them to name which two you turned. If they cannot tell, you have not turned them far enough to count.

UNIT 1 - TOPIC 1.4

Reading the field and the friends on it

■ WHAT YOU NEED ON THE FIELD

Eight cones, two balls, bibs or bands in two colours, and a pencil. Work in a group of five or six, with one Caller.

✦ WARM UP

In pairs, one leads and one follows, half a pace behind, copying every change of direction. Ninety seconds, then swap. The leader is not trying to lose the follower.

A call has just been made, and everybody is adjusting. Rowan is on the pavilion step with one arm up: that is the Caller. Then look at the four on the grass. Not one of them is watching a ball. They are all watching each other.

◆ WHAT HAPPENED

Rowan sets up a four a side game on the match ground. It works well for about two minutes.

Then he calls out: "**Only side steps.**"

Pip keeps running, because he did not hear it. Bramble hears it, stops completely, thinks, and then starts side stepping. Tuft changes to side steps without stopping, and he is the only one who does. Sorrel keeps playing exactly as before, at speed, and scores.

One of those five responses is the skill this topic teaches. It is not the one who scored.

► Learn

Everything so far has happened on a surface where nothing changed. Real activity is not like that. Something always changes: the rule, the space, the equipment, or what another person decides to do half a second before you do.

Adapting means changing what your body is doing, while it is doing it, without stopping.

That is why this unit has a fourth job.

JOB IN THIS TOPIC

Caller Changes one thing, out loud, once, while the activity is running. Then watches what happens.

Three things change in an activity, and a good Caller only ever changes one at a time.

WHAT CHANGES AN EXAMPLE A CALLER CAN CALL

The rule "Only side steps." "Three passes before a shot." "Left hand only."

The space "That third of the match ground is closed." "Everybody inside the arc."

The people "Swap one player between teams." "Bramble plays for both sides."

And there is a fourth thing that changes constantly with nobody calling it at all: **what the person opposite you does**. Reading that is the hardest part of Year 5 Physical Education, and it cannot be taught from a page. What a page can do is tell you where to look.

PLAN 1.4 • WHERE TO LOOK, AND WHEN

Look at the ochre arrow, not the dashed one. You are the dark circle in the middle. The player you are marking is the pale circle nearest you. Watch their hips, because hips cannot lie about which way somebody is about to go, and feet and eyes both can. The shaded block is the space that opens if they turn.

■ WATCH ONE DONE WELL

Tuft adapts without stopping, and here is what he actually did.

Rowan calls "only side steps" while Tuft is mid stride.

- 1 He does not stop. He finishes the stride he is already in, because stopping in the middle of a stride is how you fall over.
- 2 He turns his shoulders square to the direction he was travelling, which is the one change that makes a side step possible.
- 3 He takes the next step sideways, slowly, and only gets quicker once the second sideways step has landed.

Three quarters of a second, no stop, and he was slow for about two seconds afterwards. Being slow for two seconds is the price, and it is a much smaller price than stopping.

Bramble did the same three things. He just did them in the wrong order, and stopping was how he bought himself the time to think.

● Your turn

Play a small game of your own choosing, four a side, with one Caller. The Caller changes **one** thing every ninety seconds and writes down what happened.

- 1 Choose your activity and write down what it is and the one rule that matters most in it.

OUR ACTIVITY, AND ITS MOST IMPORTANT RULE

- 2 The Caller fills this in as the game runs. Everybody else fills it in afterwards, from memory, and then you compare.

CALL	WHAT THE CALLER CHANGED	WHO KEPT MOVING	WHO STOPPED FIRST
First	_____	_____	_____

CALL	WHAT THE CALLER CHANGED	WHO KEPT MOVING	WHO STOPPED FIRST
Second	_____	_____	_____

Third _____

- 3 Take a turn as the Caller yourself. Write the call you made, and then be honest about whether it was a good one. A good call changes one thing, is safe, and can be understood in three words.

MY CALL, AND WHETHER IT WAS A GOOD ONE

- 4 Now choose your own activity for the last ten minutes of the lesson, and justify the choice. This is the part of the topic your teacher is looking at most closely.

QUESTION	YOUR ANSWER
----------	-------------

What did you choose?

Which of your four dial settings does it need most?

Which of the four jobs are you weakest at, and will this activity make you use it?

- 5 Last one. Write down one thing somebody else did that you are going to copy. Name them, and say what they did rather than that they were good at it.

WHAT I AM GOING TO COPY, AND FROM WHOM

■ SCAN TO FIND OUT MORE

Choose your own, from an A to Z. A list of sports and activities from the NHS, with games you can vary and ways to be active that do not look like sport at all. Task 4 above asks you to choose an activity for yourself and say why. This is where to look if you cannot think of one.

AN ADULT HOLDS THE DEVICE AND OPENS THE PAGE

■ STAY SAFE

A change of rule changes the risk as well as the game. Before any call, the Caller checks two things:

Is it safe at speed? "Eyes closed" and "backwards only" are not calls. Anything that stops a pupil seeing where they are going is never called.

Does everybody know? A call nobody heard is worse than no call at all, because half the group is now playing a different game from the other half. Call it loudly, once, and check that heads come up.

If two pupils are moving fast towards the same space, the call is "stop", and everybody stops.

▲ FIELD CHALLENGE

The silent call.

Play the same game again, but the Caller may not speak. They change the space instead: move one cone, close one area, or put a bib on the floor. Nobody is told what the change means.

The task for everybody else is to work out what changed, adapt, and keep playing. Expect it to go wrong for about twenty seconds. That twenty seconds is the most useful part of this unit.

The long field games

Everything on this ground, in one afternoon, in rotating roles.

The long field games, and notice who is sitting down. Two friends working on the strip, three on the pavilion steps with notebooks and the watch, one standing with an arm up. On this afternoon four of the six jobs do not involve moving at all, and the book counts them equally.

You are going to run your own meet, in groups of six, and every pupil holds every job at least once.

What you are making

Not a competition. A **meet**: four stations around the ground, a rotation, and a record of what each mover changed between their first attempt and their last.

The only score that gets written down is each mover against their own first attempt. There is no winner, and this is not a softening of the task. Comparing two pupils tells you nothing you can act on. Comparing one pupil with themselves half an hour ago tells them exactly what to do next.

The four stations

- 1 **The practice station** (topic 1.1). One skill, one phase or join chosen, fifteen attempts, a tally before and after. The watcher looks at one part only.

- 2 **The sequence station** (topic 1.2). A three or four part sequence, timed, with the watcher counting stops rather than judging quality.
- 3 **The dial station** (topic 1.3). One skill, performed four ways, and the mover has to say which dial they turned before they go.
- 4 **The caller station** (topic 1.4). A small game with a Caller changing one thing every ninety seconds.

Setting up, before anybody competes. Six friends and five loads: a bench between two of them, an armful of cones, a rope, a rolled mat, and Willow carrying nothing at all because her job starts later. Count the jobs in this picture. There are more of them than there are stations.

How to run it

- 1 Six pupils, four stations. At each station two people are moving and the rest are timing, watching and calling. Twelve minutes per station.
- 2 Before you start, write the rotation down so that every pupil holds all four jobs across the afternoon. Rowan is good at this. So are you, with a pencil.
- 3 Every mover gets a record sheet, and the watcher fills it in. Not the mover.
- 4 After every station, the watcher reads out what they wrote, in their own words, to the mover. Thirty seconds each. This is the part everybody wants to skip and it is the part that does the work.
- 5 At the end, each pupil writes one sentence: what changed today, and how they know.

OUR ROTATION: SIX NAMES, FOUR STATIONS, FOUR JOBS

Test it before anybody stands on it. Both feet of the bench flat on the grass, the mat laid flush beside it with no gap, and a paw on the bench end pushing to see whether it rocks. Ten seconds. Do it every time the ground is rebuilt.

STAY SAFE

The meet uses more equipment, more space and more pupils moving at once than any single lesson in this unit, so the checks are stricter, not looser.

One adult walks the whole ground before it starts and after any station is rebuilt.

Stations do not overlap. No run up crosses another station's space. If two stations have to share a boundary, the cones marking it are the ones nobody crosses.

The word "stop" stops the whole meet, from anybody, including a mover.

☐ LOOK WHAT I CAN DO

Tick only what is true today. Come back at the end of the unit and tick again in a different colour.

- ☐ I can name the parts of a skill I already had, and its joins
- ☐ I can choose one part to change, and say it as something a body part does
- ☐ I can practise that part slowly on its own and then put it back
- ☐ I can join three skills with no stop at either join
- ☐ I can say which join is my weaker one and what happens there
- ☐ I can perform one skill at two different speeds on purpose
- ☐ I can perform one skill at two different levels on purpose
- ☐ I can perform one skill along two different paths on purpose
- ☐ I can keep moving when a Caller changes the rule
- ☐ I can make a good call myself: one thing, safe, three words
- ☐ I can watch somebody and say what I saw instead of whether it was good
- ☐ I can choose an activity for myself and give a reason for choosing it

How did it go?

Tuft, deciding. He has his own record sheet on his knee and a coloured pencil in his paw, and he has not marked it yet. He is looking back down the empty strip, remembering what his body actually did. That pause is the part of this page that matters.

Colour in one ring per row. Green if you could do it today, amber if you nearly could, and red if not yet. Not yet is a perfectly good answer in August.

WHAT YOU WERE WORKING ON	TODAY
Taking a skill apart into phases and joins	☐ ☐ ☐
Practising one part rather than repeating the whole thing	☐ ☐ ☐
Joining three skills with no stop	☐ ☐ ☐
Fixing a join by changing something earlier	☐ ☐ ☐
Turning the speed dial on purpose	☐ ☐ ☐
Turning the level dial on purpose	☐ ☐ ☐
Turning the path dial on purpose	☐ ☐ ☐
Adapting without stopping when a call came	☐ ☐ ☐
Watching well: what I saw, not whether it was good	☐ ☐ ☐
Being an honest timer	☐ ☐ ☐

Three questions to answer in a sentence each

- 1 Which one part of a skill did you change on this ground, and what told you it had changed?

ONE

- 2 Which of your joins is still your weakest, and what are you going to change before it?

TWO

- 3 Which of the four jobs are you worst at? Mover, timer, watcher or caller. Being worst at watcher is the most common answer and the most useful one to admit.

THREE

Words we used

Willow's notebook, open and waiting. A stopwatch, a pencil, an apple and one barn owl feather. Every word on the next two pages is a word she needed in order to write down what she saw.

Every word this ground taught you, with what it means here.

WORD	WHAT IT MEANS ON THE FIELD
phase	One part of a movement, on its own. A throw has four.
join	The place where one phase becomes the next one. Where the work is.
phase strip	The drawing this book uses to show a movement's phases in order, with the joins as gaps.
repeat	Doing a movement again, with nothing you are trying to change.
practise	Doing a movement again <i>with one part you are trying to change</i> , a way to tell, and enough goes.
refine	To make one part of a skill better without changing the rest of it.
consolidate	To make a skill reliable, so it works when you are tired, rushed or watched.

WORD	WHAT IT MEANS ON THE FIELD
sequence	Two or more skills performed one after another with no stop between them.
control	Your body does what you decided it would do.
fluency	It does it without stopping or wobbling.
variety	You can decide differently next time. Four settings, not one.
dial	Speed, level or path: the three things you can change about almost any movement.
level	How high your body is: high, medium or low, held for the whole distance.
path	The shape of the line you travel along: straight, curved or zigzag.
adapt	To change what your body is doing, while it is doing it, without stopping.
plan panel	The ground drawn from directly above.
elevation	The ground drawn from the side, which is the only way to show height.
mover	The job of doing the movement properly.
timer	The job of counting or timing, and saying the number that is really there.
watcher	The job of looking at one part and saying what you saw.
caller	The job of changing one thing, out loud, once, while the activity runs.

2 Understanding movement

A watcher who can name what a body did can help it change. This unit gives you the words, the criteria and the first tactics that make a game make sense.

✓ ON THIS GROUND YOU WILL

2.1

describe a movement in words a teammate can use

2.2

show action, dynamic, space and relationship in what you do

2.3

apply a success list to your own work and to a friend's

2.4

use a simple rule and a simple tactic on purpose

○ COME OUT TO THE FIELD

In Unit 1 you learned to change one part of a skill. On these steps you learn to **say the part out loud**, so somebody else can change it too.

A Year 4 watcher often says "good" or "try harder". That is a feeling, not a note. Year 5 notes name a body part, a direction and a result.

UNIT 2 - TOPIC 2.1

Words that name a movement

■ WHAT YOU NEED ON THE FIELD

One football-sized leather ball between four, a rope rectangle about twelve metres by eight, notebooks, pencils. Work in fours: mover, watcher, feeder, caller.

◆ WARM UP

Jog the rectangle twice. On the second lap, each time you pass a cone call out one body part you are using: *ankles, hips, shoulders, eyes*. Then four standing arm swings each side.

Willow naming a pass. Pip's kicking foot has followed through toward empty grass, not toward a teammate standing still. Look at the space the ball is travelling into: that is the sentence the watcher should write.

◆ WHAT HAPPENED

João passes to Inês. The ball arrives at her feet. Everybody cheers.

Willow writes: *Pass went to where Inês was standing. She had to stop to receive it. João's kicking foot pointed at Inês, not at the grass in front of her.*

The cheer said the pass worked. The note said it did not. Both can be true on the same kick, and only the note tells João what to change.

🕒 DO YOU REMEMBER?

*In Year 4 you learned to watch hips, not feet. Keep that. This year you add **where the ball is going**, because a pass is a movement plus a destination.*

► Learn

A useful description has three parts, always in this order:

PART	QUESTION IT ANSWERS	EXAMPLE
Action	What did the body do?	side-foot pass
Detail	Which part, which direction?	kicking foot followed through toward the left corner
Result	What happened next?	ball arrived one metre in front of Inês, who was already moving

"Good pass" has none of the three. "He tried" has none of the three. "The ball went to empty grass on Inês's left, and she did not have to stop" has all three.

More effective and less effective is not a personality judgement. It is a comparison against one chosen detail.

PHASE STRIP 2.1 • NAMING A PASS

1 Look watcher stands still and watches one part only	2 Name say the action in two or three words	3 Place say where the ball or body travelled	4 Result say what the teammate then had to do
--	--	---	--

If you skip phase 3, the mover hears a compliment. If you include it, they hear a job.

■ WATCH ONE DONE WELL

Willow watches João's second pass. She does not write until the ball has stopped.

- 1 Action: side-foot pass, right foot.
- 2 Detail: kicking foot pointed at the cone on Inês's left, not at Inês.
- 3 Result: Inês ran onto it and passed first time.

Then she reads the three lines aloud. João tries the same detail again. That is the whole of describing movement so that it improves.

• Your turn

- 1 Choose one skill: a pass, a throw, a catch or a kick. Write the **one detail** your watcher will look at.

THE ONE DETAIL

- 2 Ten attempts. Watcher writes three words each time: action, place, result. Then swap.

GO	ACTION	PLACE THE BALL OR BODY WENT	RESULT FOR THE TEAMMATE
1	_____	_____	_____
5	_____	_____	_____

GO	ACTION	PLACE THE BALL OR BODY WENT	RESULT FOR THE TEAMMATE
----	--------	-----------------------------	-------------------------

10

- 3 After the tenth, the mover writes which pass was more effective, using the watcher's words, not their own feeling.

MORE EFFECTIVE, AND WHY

✦ DID YOU KNOW?

Sports scientists call this **knowledge of performance**: information about what the body did, not only whether it scored. A Year 5 watcher who names a foot and a direction is already doing that job.

🚩 STAY SAFE

Stand still when you are watching. A moving watcher misses the detail and walks into the pass. The feeder never throws until the watcher is off the rectangle.

▲ FIELD CHALLENGE

Can you describe a movement you cannot see the end of? Watch only the first half of a pass, then predict the result before the ball arrives. Check. If your prediction matches, your eyes are on the right part.

UNIT 2 - TOPIC 2.2

Action, dynamic, space, relationship

■ WHAT YOU NEED ON THE FIELD

One bouncing ball between four, eight cones, a rope rectangle. Same four jobs.

✦ WARM UP

Travel the rectangle: walk the long sides, skip the short sides, then jog one full lap changing to a low walk whenever you pass a teammate.

Empty grass is a teammate. Rowan has the ball and is looking left, where Sorrel has already run into space. Pip has stepped toward Rowan to draw Bramble with him. Count the gaps. The useful ones are the ones a pass can reach.

◆ WHAT HAPPENED

Beatriz stands next to Tomás every time he has the ball. She thinks that is helping.

Willow: Beatriz is in Tomás's space. The defender only has to mark one patch of grass. If she stands three metres wide, Tomás has two options instead of one.

Helping, in a game, is often **leaving**.

► Learn

Four words, and you will use all four for the rest of the year.

WORD	MEANS ON THE FIELD	YEAR 5 EXAMPLE
Action	The skill itself	pass, dribble, jump, strike, catch
Dynamic	How the action is done	fast or slow, strong or soft, sudden or sustained
Space	Where it happens	close, wide, high, low, into a gap
Relationship	Who you move with or against	supporting, marking, leading, following

Unit 1's three dials (speed, level, path) are dynamics and space under other names. This topic adds **relationship**, which is what makes a pass a pass rather than a kick at a wall.

PHASE STRIP 2.2 • A SUPPORTING RUN

1 See look at the person with the ball, then at the gap beside them	2 Leave move away from them, not towards them	3 Show make a target with a hand or a call so they can find you	4 Receive arrive as the ball arrives, already moving
--	--	--	---

Phase 2 is the one Year 5 classes skip. Standing next to the ball feels loyal. It is not useful.

■ WATCH ONE DONE WELL

Sorrel supports Rowan. She does not call for the ball first.

She takes three steps wide, turns her hips toward Rowan, and puts one paw out as a target. Rowan has a new option he did not have two seconds ago. That is

relationship: her movement changed his.

• Your turn

- 1 Play 3 v 1 in a small square for two minutes. After each pass the passer **must move**. Watcher tallies how often the passer moved into space rather than stood.

PASSES WHERE THE PASSER THEN MOVED

- 2 Freeze after a pass. Point to: the action, the dynamic, the space used, the relationship. Four fingers, four words.
- 3 Draw your last successful pass as a plan: start ring, dashed path of the ball, dashed path of the supporting run, a cross for the defender.

PLAN OF ONE SUPPORTING RUN

→ GO A LITTLE FURTHER

Play the same square with a **soft** pass only, then a **fast** pass only. Same action, two dynamics. Which one made the supporting run easier, and why?

🚩 STAY SAFE

3 v 1 is a passing practice, not a tackle practice. The one in the middle intercepts with their hands or feet. No contact.

▲ FIELD CHALLENGE

Can your team keep the ball for eight passes with nobody standing still? If someone stops, the count returns to zero.

UNIT 2 - TOPIC 2.3

Success you can see

■ WHAT YOU NEED ON THE FIELD

One ball, five cones as a target wall or a hoop, notebooks. Work in pairs, then fours.

✦ WARM UP

Ten easy throws or kicks at a cone from six metres. No score. Shoulders and ankles awake, nothing judged yet.

A success list is a pointing finger, not a mood. Tuft is showing Pip the finish of the throw, which is the third tick on their card. Pip is listening. Look at the still throwing arm: that is the criterion, not the smile.

◆ WHAT HAPPENED

Ana scores five out of ten at the hoop and says she is terrible. Miguel scores two and says he is fine, because his elbow is above his shoulder every time.

They are using different success lists. Only Miguel's list can be practised tomorrow.

► Learn

A **success criterion** is a tick a watcher can see. "Try my best" cannot be seen. "Land on two feet and hold for two seconds" can.

Write three, never ten. Three can be remembered in a game. Ten become a speech.

WEAK CRITERION	STRONG CRITERION
Throw better	Elbow above the shoulder before release
Be a good teammate	Call the name of the person you are passing to
Run faster	First three steps short, then longer

You apply the same three ticks to yourself and to a partner. That is how improvement plans stay fair.

■ WATCH ONE DONE WELL

Tuft's three ticks for a target throw.

- 1 Side-on stance.
- 2 Elbow above the shoulder.
- 3 Finish with the throwing hand near the opposite hip.

He scores 1 out of 10 hits and 8 out of 10 on the ticks. His plan is not "hit more". It is "keep tick 2 while I step a metre closer".

● Your turn

- 1 Write three visible ticks for one skill you already have from Unit 1.

TICK	WHAT A WATCHER WILL SEE
1	_____
2	_____
3	_____

- 2 Ten attempts. Partner ticks. Then swap. Write one change for next time that uses a tick, not a score.

MY IMPROVEMENT PLAN, IN ONE SENTENCE

- 3 Read your partner's plan back to them. If you cannot see the change they named, the plan is not finished yet.

* THE WATCHER'S NOTES

Ana, throws 1 to 5. Hits: two. Elbow below the shoulder: five. Plan she wrote: "do better". That plan has nothing I can watch.

Ana, after we rewrote the plan. Hits: still two. Elbow above: four of the next five. That is the plan working.

STAY SAFE

Target practices need a throw line and a waiting line. Nobody collects a ball while another throw is in the air.

▲ FIELD CHALLENGE

Can you improve a tick without changing the score? Ten more goes. If the ticks rise and the hits stay the same, you still succeeded today.

UNIT 2 - TOPIC 2.4**Rules that make tactics possible****■ WHAT YOU NEED ON THE FIELD**

One soft bouncing ball, a rope rectangle, four cones as two mini-goals, bibs or bands for two teams of three.

✦ WARM UP

3 v 1 keep-ball for one minute, then swap the middle player. End with four shoulder rolls each side, standing.

Positions, not a scramble. The ball is in the air and Sorrel is already under it. Rowan is backing her. Pip and Tuft have spread instead of crowding. A tactic is just a decision you make before the ball arrives.

◆ WHAT HAPPENED

A class plays "no rules" handball. Everybody follows the ball. Nobody scores, two people collide, and Tomás says the game is boring.

Rowan puts in two rules: you may hold the ball for three seconds, and you may not stand inside the goal square unless you have the ball. Suddenly there is space, and the same children can play.

Rules are not the opposite of fun. They are what makes a tactic possible.

► Learn

A **tactic** is a decision you make on purpose during a game. At Year 5 the useful ones are small.

TACTIC	WHAT YOU ACTUALLY DO
Create space	Move away from the ball and from your marker
Use space	Pass into the gap, not to the feet of a still teammate

TACTIC	WHAT YOU ACTUALLY DO
Support	Arrive at an angle, not in a straight line behind the passer
Defend space	Stand between the ball and the goal, not on the person
Change pace	Slow to draw a marker, then go

You cannot do those without a rule that stops everyone running at the ball.

PHASE STRIP 2.4 • PASS, THEN MOVE

1 See find a teammate who has space, not the nearest teammate	2 Pass into the space they are running into	3 Leave move off your spot as soon as the ball has gone	4 Offer show for the next pass at a new angle
--	--	--	--

Phase 3 is the tactic. A pass without a move is a gift to the defender.

■ WATCH ONE DONE WELL

Rowan's three-second rule. In a 4 v 4 mini-game, you may hold the ball for three seconds only. The first two games, people panic and throw it away. By the third, they look up before they pass. The rule taught the tactic. Rowan did not have to shout "look up".

• Your turn

- 1 Play 4 v 4 on a small pitch with two rules only: three-second hold, and a pass must go to a moving teammate. Four minutes. Watcher counts completed passes.

COMPLETED PASSES IN FOUR MINUTES

- 2 Freeze twice. On each freeze, point to one player who is **creating space** and one who is **crowding**.
- 3 Write the tactic your team will try in the next four minutes. One sentence.

OUR TACTIC

✧ DID YOU KNOW?

"Pass and move" is the oldest invasion-game sentence in English. It is two tactics glued together: use space, then create the next bit of space. You do not need a playbook. You need the habit.

🚩 STAY SAFE

Small-sided games: no slide, no charge, no playing the person. If the ball and a person arrive together, the person with the ball is allowed to keep it and the other person backs off.

▲ FIELD CHALLENGE

Can your team create and use space on purpose? Next game: a goal only counts if the scorer received the ball in a gap, not with their back to a crowd.

The pavilion watch

Four stations, twelve minutes each, every pupil holds mover, watcher, feeder and caller once.

- 1 **Name it** (2.1). Ten passes, three-part notes.
- 2 **Support it** (2.2). 3 v 1, passer must move.
- 3 **Tick it** (2.3). One skill, three visible criteria.
- 4 **Play it** (2.4). 4 v 4 with the three-second rule.

At the end, each pupil reads one of their own notes aloud. The sentence that cannot be turned into a next attempt is rewritten.

STAY SAFE

Stations do not overlap. One adult walks the ground before you start. "Stop" stops every station.

LOOK WHAT I CAN DO

- ☐ I can describe a movement with action, place and result
- ☐ I can tell a more effective attempt from a less effective one using a detail
- ☐ I can name action, dynamic, space and relationship in a freeze
- ☐ I can support a teammate by leaving, not by crowding
- ☐ I can write three visible success ticks
- ☐ I can apply those ticks to myself and to a partner
- ☐ I can keep a simple rule in a small game
- ☐ I can pass, then move, on purpose
- ☐ I can point to space being created in a freeze

How did it go?

Colour one ring per row.

WHAT YOU WERE WORKING ON	TODAY
Naming what I saw, not whether I liked it	☐ ☐ ☐
Moving into space after a pass	☐ ☐ ☐
Using three visible ticks	☐ ☐ ☐
Keeping a simple rule so a tactic could work	☐ ☐ ☐

ONE DECISION THAT WORKED, AND ONE I WILL CHANGE NEXT TIME

Words we used

WORD	WHAT IT MEANS ON THE FIELD
describe	Name action, detail and result, so a mover can change something.
effective	The attempt did the job you chose, not merely "looked nice".
action	The skill itself: pass, jump, catch, strike.
dynamic	How the action is done: fast, slow, strong, soft.
space	Where the body or the ball travels, including the empty bits.
relationship	How you move with or against other people.
success criterion	A tick a watcher can see.
tactic	A decision you make on purpose during a game.
support	Move to a useful place so a teammate has an option.
marking	Guarding a person or a space, without contact.

3 Moving creatively

No rope, no lines, and more than one right answer. This unit is for inventing a movement, choosing a better path, and making a phrase that means something.

✓ ON THIS GROUND YOU WILL

3.1

invent movement on your own, with a partner and in a group

3.2

choose a different path when the first one is blocked

3.3

solve a movement problem you set yourselves

3.4

build a short phrase that shows a theme or a mood

○ COME OUT TO THE FIELD

The Practice Strip taught you to refine. The Pavilion Steps taught you to name. The Orchard asks a different question: **what else could this movement be?**

There is still control. Creative is not the same as messy. A phrase you cannot repeat is not a composition. It is a lucky go.

UNIT 3 - TOPIC 3.1

More than one right answer

■ WHAT YOU NEED ON THE FIELD

Open orchard space or a clear hall, four mats, one bench, a drum or a clap for a shared beat. Work alone, then pairs, then groups of four.

◆ WARM UP

Travel anywhere for one minute without using the same path twice. Then freeze in a shape on the teacher's clap, hold three seconds, and melt out of it.

Same task, two balances. Pip is on one foot on the log. Tuft has invented a curved comma on the grass. Neither is copying. That is the point of this ground: two answers can both be right.

◆ WHAT HAPPENED

The teacher says: "Find a way to travel from this tree to that mat without walking."

Pip hops. Sorrel cartwheels. Tuft rolls. Bramble bear-walks. Rowan invents a turn-and-step that nobody has a name for.

All five have done the task. A Year 3 class would have waited to be shown the "proper" way. You are not that class any more.

► Learn

Creativity here means **a choice you can repeat**. Four contexts, all in this topic:

CONTEXT	WHAT "INVENT" LOOKS LIKE
Individual	Your own travel, balance or jump, named so you can do it again
Pair	Two bodies that fit together without collapsing
Expressive	The movement shows something: heavy rain, a secret, a celebration
Cooperative or competitive	A shared still-shape, or a mirrored phrase against a partner

You do not need new skills. You need new **joins** and new **uses** of skills you already have.

■ WATCH ONE DONE WELL

Tuft's comma. He is asked for a still shape that is not standing up. He curves his back, tucks his chin, and holds. Willow can copy it. That is enough to count as an invention: it can be taught.

● Your turn

- 1 Invent three ways to travel eight metres without walking. Name them.

MY THREE TRAVELS, NAMED

- 2 With a partner, build a still-shape that uses three contact points with the floor between you. Hold for five seconds. Swap who is the base.
- 3 In fours, make a cooperative freeze that everyone can walk into from a different direction. Then make a competitive version: two pairs, same starting signal, first pair to a held freeze wins the round. Same skill, two contexts.

STAY SAFE

Bases stay stable. No standing on shoulders. A held shape is only held if everybody can get out of it on their own.

FIELD CHALLENGE

Can you perform your phrase with control and fluency, twice the same? If the second go does not match the first, it is not yet a composition.

UNIT 3 - TOPIC 3.2

When the first path is blocked

WHAT YOU NEED ON THE FIELD

Two trees or two cones as obstacles, one bench, one mat, orchard space. Work in threes: mover, watcher, changer.

✦ WARM UP

Jog, and each time you meet an obstacle go around it a different way from last time: left, right, under, over (only if the obstacle is a bench an adult has checked).

Three answers to the same two trees. Sorrel curves wide and fast. Bramble goes slow and low under a branch. Rowan steps off the bench to the right. The obstacle did not change. The solution did.

◆ WHAT HAPPENED

A branch hangs low across the usual path. The class stops and looks at the teacher.

Willow: The branch is the task. Go under, go around, or change the dynamic and creep. Standing still is the only answer that is not allowed.

Environmental challenge means the space itself is the problem, not a defender.

► Learn

An **alternative course of action** is a second plan you can use when the first one fails. You practise it **before** you need it.

PHASE STRIP 3.2 • CHOOSE ANOTHER WAY

1

See

name the obstacle:
high, low, wide, moving,
still

2

First way

try the obvious path
once

3

Block

the changer closes that
path (a cone, a bench, a
person)

4

Second way

a different dynamic or a
different path, not a
slower version of the
first

If your second way is "the first way, but careful", you have not chosen yet.

■ WATCH ONE DONE WELL

Bramble and the low branch. First way: walk under, head up, and he clips it. Second way: he sinks (level dial from Unit 1) and creeps, eyes forward. Same destination. Different dynamic. That is an alternative, not a retreat.

● Your turn

- 1 Set a start and a finish eight metres apart, with one obstacle. Write two routes before you move.

ROUTE A AND ROUTE B

- 2 The changer closes route A after your first go. Use route B. Watcher says which dial you turned.
- 3 Now the changer may close a path **while you are moving**. Adapt without stopping. That is Unit 1.4 on orchard grass.

→ GO A LITTLE FURTHER

Add a time limit: both routes in twenty seconds, control kept. Speed is allowed only if the landing stays quiet.

STAY SAFE

Nothing is jumped that an adult has not tested. Under a branch means a branch you can see through, not a thick hidden one. Head stays up.

FIELD CHALLENGE

Can you change direction without losing control? Three closed paths in one crossing, and you still arrive on two feet, still.

UNIT 3 - TOPIC 3.3**Problems you set yourselves****WHAT YOU NEED ON THE FIELD**

Four mats, two benches, six cones, a rope. Groups of four. One notebook per group.

WARM UP

Each group has thirty seconds to put the kit into a starting shape, then thirty seconds to put it all back. Practise the tidying. You will need it.

A group still-shape is a sentence. Pip tall, Sorrel leaning, Tuft low, Bramble as a base, Rowan linking. It looks composed because somebody decided where each body went. That decision is the work.

◆ WHAT HAPPENED

The card says: Get the whole group from this mat to that bench without anyone's feet touching the grass, using only the kit in front of you.

There is no demonstration. The group has to design the solution, try it, fail, and design again. That is the lesson. The crossing is the evidence.

► Learn

A movement problem has:

- 1 A **start** and a **finish**.
- 2 A **constraint** (no feet on grass, only three touches, must include a balance).
- 3 A **check** (everybody arrives, kit is still usable, nobody was lifted unsafely).

You may change the plan. You may not change the constraint.

■ WATCH ONE DONE WELL

Rowan's group and the grass rule. First plan: a long bench as a bridge. It wobbles. Second plan: two mats as stepping stones, moved by the people who have already arrived. Slow, and everybody lands. The second plan is the better invention because it survived contact with the real grass.

● Your turn

- 1 As a group, write a problem with a start, a finish and one constraint.

OUR PROBLEM, IN FOUR LINES

- 2 Solve a **different** group's problem. Three attempts. After each, one sentence of what you will change.
- 3 Return to your own problem. Did another group find a solution you had not imagined? Steal it, with thanks, and make it yours.

* THE WATCHER'S NOTES

Group A, attempt 1: they argued for a minute and nobody moved. That is not planning. That is stalling.

Attempt 2: Tuft tried a route while the others watched. Then they copied it. That is a solution found through movement, which is what the card asked for.

STAY SAFE

No lifting a person off the floor. Kit moves, bodies stay in contact with something stable. If a bench rocks, it is out of the problem until an adult re-sets it.

FIELD CHALLENGE

Can you solve it two ways? Same constraint, two different uses of the kit. Perform both.

UNIT 3 - TOPIC 3.4

A phrase that means something

WHAT YOU NEED ON THE FIELD

Open space, a shared beat (clap, drum, or a count of eight), notebooks. Pairs, then groups of four.

WARM UP

Walk on counts of eight. On the next eight, travel low. On the next, travel light and high. Same path, three moods.

Same path, two weathers. Sorrel travels low and slow, as if the air were heavy. Pip takes the same line upright and light. The grass has not changed. The mood has.

◆ WHAT HAPPENED

*The theme is **the tide at Cascais**. Not a play about the sea. A movement phrase: in, hold, out, rest.*

Inês's group copies waves with their arms and it looks like a sketch. Tomás's group travels in on four counts, holds a wide still-shape, and melts out on four. You can read the tide without a single spoken word.

► Learn

Composition here means putting movements in an order that can be performed twice. A **theme** is the idea. A **mood** is how it feels: tense, calm, joyful, heavy.

You already have the tools: Unit 1's dials, Unit 2's words, this unit's inventions.

PHASE STRIP 3.4 • A FOUR-COUNT PHRASE

1

Start

a still shape that already belongs to the theme

2

Travel

one pathway, one dynamic

3

Turn

a change: level, direction or relationship

4

Close

a still shape that is not a copy of the start

If start and close are the same shape, the phrase has not gone anywhere.

■ WATCH ONE DONE WELL

Sorrel's rain. Start: tiny and high, fingertips. Travel: fast, light, many direction changes. Turn: suddenly slow and low. Close: a held crouch. Two performances, same counts. Willow could copy it after one watch. That is a composition.

● Your turn

- 1 Choose a theme from this list, or write your own: tide, wind in the orchard, a secret, a race that is not a race, morning in Estoril.

OUR THEME AND OUR MOOD

- 2 Build a four-part phrase and write the counts.

PART	WHAT HAPPENS	COUNTS
Start	_____	
Travel	_____	
Turn	_____	
Close	_____	

- 3 Perform it twice. Watchers tick: same order, same dynamics, readable theme.

STAY SAFE

Expressive work still needs space. Travelling phrases do not run through another group's still-shape. Music, if you use it, stays at a volume where "stop" can still be heard.

▲ FIELD CHALLENGE

Can you change the mood without changing the actions? Same four parts, new dynamic. If the watchers can name the new mood, the composition is doing its job.

The orchard composition

Each group of four performs one phrase for the rest of the class.

- 1 Theme and mood named before they start.
- 2 Four parts, performed twice.
- 3 Watchers write one sentence: what they **saw**, not whether they liked it.
- 4 The group names one join they will smooth next time.

☐ LOOK WHAT I CAN DO

- ☐ I can invent a travel and name it so I can repeat it
- ☐ I can build a pair still-shape with a stable base
- ☐ I can use the same skill in a cooperative and a competitive task
- ☐ I can choose a second path when the first is closed
- ☐ I can adapt mid-travel without stopping
- ☐ I can help my group solve a movement problem
- ☐ I can perform a four-part phrase twice the same
- ☐ I can say what theme or mood a phrase is showing

How did it go?

WHAT YOU WERE WORKING ON	TODAY
Inventing rather than copying	☐ ☐ ☐
Choosing a second path	☐ ☐ ☐
Solving a group problem by moving, not only talking	☐ ☐ ☐
Performing a phrase that other people could read	☐ ☐ ☐

THE IDEA I INVENTED, AND HOW I WILL MAKE THE JOIN SMOOTHER

Words we used

WORD	WHAT IT MEANS ON THE FIELD
invent	Make a movement you can repeat and teach.

WORD	WHAT IT MEANS ON THE FIELD
alternative	A second plan, not a slower copy of the first.
constraint	The rule a problem is not allowed to break.
composition	Movements in an order you can perform twice.
theme	The idea a phrase is about.
mood	How the phrase feels: heavy, light, tense, calm.
phrase	A short sequence with a start, a travel, a turn and a close.
base	The person or the body part that keeps a still-shape stable.

4 Taking part

Your job, everybody else's job, and a turn at leading. This unit is modified games: invasion, net/wall, striking and fielding, and target. The sport is the vehicle. The work is the role.

✓ ON THIS GROUND YOU WILL

4.1

join in alone,
with a partner
and in a small
team

4.2

name a team
job and keep it
for a whole
game

4.3

set a short
personal goal
you can check

4.4

lead a short
task, then follow
someone else's
lead

4.5

use a strength,
and pick one
thing to refine

4.6

listen, wait, and
plan with other
people

○ COME OUT TO THE FIELD

A match ground without jobs is just a crowd. Year 5 is when you stop following the ball and start keeping a role.

You will play modified football, basketball, handball, hockey, volleyball, striking and fielding, and target games. None of them is a specialist course. Each one is a place to practise taking part.

UNIT 4 - TOPIC 4.1

Alone, pair, group

■ WHAT YOU NEED ON THE FIELD

Balls that bounce and balls that do not, cones, a rope rectangle, one set of stumps or a hoop as a target. Rotate through three scales of the same skill.

◆ WARM UP

One minute on your own with a ball (keep it up or dribble). One minute with a partner (pass and move). One minute in a three (keep-ball). Same ball, three social scales.

Three scales of the same afternoon. Tuft catching alone, Pip and Sorrel passing as a pair, Rowan and Bramble and Willow in a three. Look at the gaps between the groups: each scale needs its own space.

◆ WHAT HAPPENED

Miguel only wants the full game. When it is pair work he stands on one leg and waits.

Willow: The pair work is where his first touch gets quiet. The full game is where that touch has to survive other people. Skip the pair and the full game stays noisy.

► Learn

Involvement means you are doing the task at the scale it is written, not waiting for a more exciting scale.

SCALE	WHAT YOU PRACTISE THAT THE FULL GAME HIDES
Individual	Control, first touch, a target, a personal tally
Pair	Timing a pass, moving after it, talking in two words
Small group	A third option, a spare player, a simple tactic

A Year 5 lesson that is only the full game produces one or two touches a minute for most of the class. The three scales exist so everybody is busy.

• **Your turn**

- 1 Individual: 20 controlled bounces or dribbles. Tally the ones that stay below knee height.
- 2 Pair: 15 passes, and the passer must move. Tally completed moving passes.
- 3 Group of four: 3 v 1 keep-ball, then a 4 v 0 "around the world" against a target. Write which scale felt hardest, and which one improved your next scale.

HARDEST SCALE, AND WHAT IT TAUGHT THE NEXT ONE

■ **STAY SAFE**

Each scale has its own patch of grass. A missed individual ball must not roll into a group's game. Fetchers walk.

▲ **FIELD CHALLENGE**

Can you keep control while the scale grows? Same skill, three scales, one tally column for control. If the number drops at group scale, that is the work, not a reason to skip it.

UNIT 4 - TOPIC 4.2

Jobs in a team

■ **WHAT YOU NEED ON THE FIELD**

4 v 4 modified football or handball, two mini-goals, bibs, a whiteboard or card for the jobs.

✦ WARM UP

In fours, jog and swap the "organiser" every 20 seconds: that person chooses the next travelling action. Practise following a lead before you keep a game role.

Four jobs, four patches of grass. Bramble last, Rowan in the middle, Sorrel high and wide, Pip marking. If this picture were a crowd around the ball, the team would have no jobs left.

◆ WHAT HAPPENED

Everybody in the yellow bibs runs toward the ball. The other goal is empty. They concede.

Rowan, at half-time: We had no last player. That is a job, not a personality.

Tomorrow someone wears the last-player bib even if they would rather score.

► Learn

A team job is a **patch of grass plus a decision**.

JOB	PATCH	DECISION
Last player	In front of our goal	When to step up, when to stay

JOB	PATCH	DECISION
Middle	The centre	When to pass, when to carry
Wide	The edges	When to show, when to cut in
Press	Near their ball	When to close, when to hold

You keep the job for a set time, then rotate. Wanting a different job is allowed. Leaving your patch is not.

■ WATCH ONE DONE WELL

Bramble as last player. He hates it for two minutes, then notices that every time he stays he makes the others braver going forward. That is the job teaching the team, not the other way round.

● Your turn

- 1 Play six minutes. Each player keeps one named job. Watcher tallies how often the last player is still in their patch when the ball is at the other end.
- 2 Rotate jobs. Write one sentence: which job made you most useful, and how you know.

THE JOB I WAS MOST USEFUL IN

🚩 STAY SAFE

Last player is a position, not a goalkeeper who may dive at feet. No diving, no handling unless the game is handball.

▲ FIELD CHALLENGE

Can you keep your job when your team is losing? Two more minutes. The test is the patch, not the score.

UNIT 4 - TOPIC 4.3

A goal you can check

■ WHAT YOU NEED ON THE FIELD

Notebooks, pencils, any one skill station from 4.1, then a short game.

✦ WARM UP

Three easy goes at your chosen skill, no writing yet. Then sit. The writing is the lesson.

◆ WHAT HAPPENED

"I want to be better at football" is not a Year 5 goal. It cannot be checked on Thursday.

"I will complete four moving passes in the next game" can. At the end you know.

► Learn

A short-term personal goal is:

- **one** skill or job
- **a number** a watcher can count
- **this lesson**, not this year

You set it. A partner counts it. You do not mark your own.

● Your turn

- 1 Write this lesson's goal.

MY GOAL, WITH A NUMBER

- 2 Play. Partner tallies. Write the number you got, and one change for next lesson.

GOAL NUMBER

ACTUAL NUMBER

ONE CHANGE

* THE WATCHER'S NOTES

Miguel's first goal: "play well". I could not tally it. We rewrote it: "receive three passes facing forward." He got two. That is a better afternoon than an untallied "well".

▲ FIELD CHALLENGE

Can you set a goal that is about a teammate succeeding? Example: "I will make three passes that a moving teammate can take first time." Your goal is their first touch.

UNIT 4 - TOPIC 4.4

Leading and following

■ WHAT YOU NEED ON THE FIELD

Open space, a ball or a skipping rope for the demonstration, groups of six.

✦ WARM UP

Copy-the-leader around the rectangle, swap leader every 15 seconds. Followers must be able to see the leader. If they cannot, the leader has stood in the wrong place.

Leading is a demonstration, not a speech. Rowan shows an arm circle and the others copy from a horseshoe they can all see. He looks responsible. Look at the space in front of him: that is where a leader stands.

◆ WHAT HAPPENED

Inês is asked to lead a one-minute warm-up. She talks for forty seconds and the class gets cold.

Willow: Show it. Count it. Stop talking. A warm-up that cannot be copied in silence is not a warm-up yet.

► Learn

Leading at Year 5 is three moves:

- 1 **Stand where people can see you.**
- 2 **Do the action** as you want it done.
- 3 **Count** so they know when it ends.

Then you become a follower, which is the other half of the objective.

• Your turn

- 1 Lead a 45-second warm-up for your six. One action. Watchers tick: could we see, could we copy, did it end on time?
- 2 Follow the next two leaders without adding extra moves of your own.
- 3 Write one thing you will steal from someone else's lead.

WHAT I WILL COPY NEXT TIME I LEAD

STAY SAFE

Leaders do not invent contact, races toward walls, or anything they have not already done slowly themselves. If in doubt, choose arm swings.

FIELD CHALLENGE

Can you lead a team challenge in two sentences? "Ten passes, nobody still. Go." Then you play too.

UNIT 4 - TOPIC 4.5

What I am already good at

WHAT YOU NEED ON THE FIELD

A skill carousel: throw, catch, dribble, jump, a short rally over a line. Notebooks.

WARM UP

Visit each station for 30 seconds with no writing. Notice which one feels quiet in your body.

◆ WHAT HAPPENED

Tuft thinks he is "not sporty". Then the carousel reaches catching, and he does not drop one.

The book does not let him stay with "not sporty". It asks him to name the strength and to pick one other station as the refine.

► Learn

Strength here means a skill that is already reliable. **Potential** means a skill that improves when you give it a phase from Unit 1. You apply both to yourself and, carefully, to a partner.

You never say "you are bad at". You say "your catch is already reliable; your throw wants the elbow tick from 2.3".

● Your turn

- 1 After the carousel, write one strength and one refine, each as a visible action.

STRENGTH, AND THE ONE I WILL REFINE

- 2 Tell your partner theirs, using the same sentence shape. They must agree the words are fair before you write them down.

🚩 STAY SAFE

Feedback is about a body part or a job, never about a body. If you cannot point at the thing, you may not say it.

▲ FIELD CHALLENGE

Can you use your strength to help somebody else's refine? Five minutes as a feeder or a watcher on their station, not on yours.

UNIT 4 - TOPIC 4.6

Wait, listen, plan

■ WHAT YOU NEED ON THE FIELD

A problem card (build a mini striking-and-fielding game for six), cones, a bat or a racket, a ball that does not bounce much, a notebook.

✦ WARM UP

Sit in the planning circle first. Two minutes of stillness is part of the lesson. Then a short jog.

The pause before the game. Four friends, one notebook, nobody moving yet. Rowan points. Tuft speaks. Pip and Sorrel listen. A plan that cannot survive this circle will not survive the first bowl.

◆ WHAT HAPPENED

A group grabs the bat and starts. Two minutes later they are arguing about the rules they never agreed.

Willow: Patience is a PE skill. It looks like sitting down. It is how the game becomes playable.

► Learn

Planning together:

- 1 One person talks, the others wait.
- 2 Repeat back the rule you heard before you add a new one.
- 3 Try the game for two minutes.
- 4 Change **one** rule, not four.

• Your turn

- 1 In fours, write three rules for a striking-and-fielding mini-game that includes everyone (bowler, batter, two fielders, then rotate).

OUR THREE RULES

- 2 Play two minutes. Sit. Change one rule. Play two more.
- 3 Write who waited well, and what they waited for.

WHO WAITED, AND WHAT THAT ALLOWED

STAY SAFE

Striking: batters wear the waiting area behind the bowler, never in the hitting line. Bowlers wait for the batter to be ready. Fielders do not crowd the bat.

FIELD CHALLENGE

Can you find a solution that uses everybody's idea once? If a rule was said and then dropped, put it back in a later rotation rather than talking over it.

The match afternoon

Four modified games, eight minutes each, jobs rotating:

- 1 Invasion (football or handball), named team jobs.
- 2 Net/wall (catch-volleyball or a racket rally over a line).
- 3 Striking and fielding (the game you planned in 4.6).
- 4 Target (bean bag or ball at a hoop), personal goals from 4.3.

Every pupil leads a 30-second reset between games.

LOOK WHAT I CAN DO

- ☐ I stayed involved at individual, pair and group scale
- ☐ I kept a named team job for a whole game
- ☐ I set a personal goal with a number and checked it
- ☐ I led a short task other people could copy
- ☐ I followed a lead without adding extra moves
- ☐ I named a strength and one refine
- ☐ I waited and listened while a plan was made
- ☐ I helped a teammate succeed, not only myself

How did it go?

WHAT YOU WERE WORKING ON	TODAY
Taking part at every scale	☐ ☐ ☐
Keeping a team job	☐ ☐ ☐
A goal I could count	☐ ☐ ☐
Leading, then following	☐ ☐ ☐
Listening while we planned	☐ ☐ ☐

HOW I HELPED MY TEAM, AND THE PERSONAL GOAL I WILL SET NEXT

Words we used

WORD	WHAT IT MEANS ON THE FIELD
involvement	Doing the task at the scale it is written.
role	A job with a patch of grass and a decision.
personal goal	One skill, one number, this lesson.
lead	Show, count, stop talking.
follow	Copy the lead without adding extras.
strength	A skill that is already reliable.
refine	The one part you will change next.
patience	Waiting so a plan can be heard.

5 Taking responsibility

Sharing kit, sharing space, playing fair, asking well, and telling a teammate something they can use. The barn is where the lesson starts and where it is proved at the end.

✓ ON THIS GROUND YOU WILL

5.1

share space and equipment without a scramble

5.2

negotiate a turn so both people can work

5.3

keep fair-play rules when it would be easier not to

5.4

ask for help at the right moment, in the right way

5.5

give feedback a teammate can act on

○ COME OUT TO THE FIELD

A barn with six classes of kit and thirty pupils is a test. The test is not who is strongest. It is who can leave the barn in a state the next group can use.

Year 4 shared when a teacher stood next to the basket. Year 5 shares when the teacher is walking the far strip.

UNIT 5 - TOPIC 5.1

One basket, six of you

■ WHAT YOU NEED ON THE FIELD

One basket of balls (fewer balls than pupils), cones, ropes, bibs. Groups of six.

◆ WARM UP

Collect kit as a six: one trip, everybody carrying something, nobody empty-handed and nobody overloaded. Put it down. That is the warm-up.

Taking turns with kit, before anybody plays. Rowan hands a ball to Tuft. Pip already has one. Sorrel waits. Bramble counts what is left. The game has not started. The lesson has.

◆ WHAT HAPPENED

There are four balls and six pupils. Two people sit down in a huff.

Rowan: *Then we do not start with a game of six. We start with a rota, or we change the game to pairs sharing one ball. Sitting down is not a negotiation.*

► Learn

Sharing skilfully means:

MOVE	WHAT IT LOOKS LIKE
Count first	How many items, how many people
Rota	Names in an order, times if you have a watch
Adapt the game	If kit is short, the game shrinks, the class does not sit out
Return	Same number back, in the same state

Communication here is short: "Two more minutes, then it's yours." Not a speech.

● Your turn

- 1 Count the kit. Write a rota that uses everybody in ten minutes.

OUR ROTA

- 2 Play. Watcher ticks: did the number of balls at the end match the start?
- 3 One sentence: how you changed the game so nobody sat out.

■ STAY SAFE

Carrying: one load you can see over. Ropes are carried coiled, never trailing. Benches need two people.

▲ FIELD CHALLENGE

Can you share a space as well as a ball? Two groups, one rectangle. Agree a boundary in twenty seconds, then both work. If the boundary drifts, stop and reset it.

UNIT 5 - TOPIC 5.2

Negotiating a turn

■ WHAT YOU NEED ON THE FIELD

One hoop or one popular station, pairs, a timer.

✦ WARM UP

Pair talk: thirty seconds each, no interrupting, on the question "what do I need this station for?" Then swap.

◆ WHAT HAPPENED

Pip and Sorrel both want the hoop. Pip takes it. Sorrel stands too close and glares.

Willow: That is two people failing the same job. A negotiation is a plan both can say yes to. A glare is not a plan.

► Learn

Negotiate, at Year 5:

- 1 Say what you need (a number of goes, a type of practice).
- 2 Hear what they need.
- 3 Offer a split: time, or goes, or a shared drill.
- 4 Stick to it without being reminded.

Personal responsibility is keeping the split when you are winning.

• Your turn

- 1 Both write what you need from the station.

WHAT I NEED, IN NUMBERS

- 2 Agree a split. Practise. Timer calls the change.
- 3 Did you keep it? If not, rewrite the split so it is easier to keep, not harsher.

STAY SAFE

A station with a flying ball has a waiting mark two paces back. Negotiation happens on that mark, not under the hoop.

▲ FIELD CHALLENGE

Can you negotiate so well that the teacher does not have to come over? If they do, the split was not clear enough to survive contact.

UNIT 5 - TOPIC 5.3

Fair play when it costs you

■ WHAT YOU NEED ON THE FIELD

A small competitive game (4 v 4 invasion or a target challenge), bibs, one adult as the only referee if needed.

◆ WARM UP

Play "make it fair": one extra player joins the smaller side whenever a goal is scored, so the game keeps resetting toward even.

The game stops for a person. Pip has put a paw out. Tuft is getting up. The ball is still. Look at the others: they have stopped too. That is the rule working when it would have been easier to play on.

◆ WHAT HAPPENED

A goal is scored just after the ball went out. Half the class cheer. Beatriz, who was nearest, says it was out.

The fair-play version is: the goal does not count, and Beatriz is not treated as a spoilsport. The other version trains nobody.

► Learn

Rules in this unit are not only "no sliding". They include:

- playing to the agreed start and stop
- telling the truth about a line
- helping someone up before restarting
- not celebrating a mistake by the other team

Fair play is a tactic for keeping people in the game, including you, next week.

• Your turn

- 1 Play six minutes with one extra rule: **you are the referee for your own mistakes**. If you know it was out, you say so.
- 2 Watcher tallies honest calls. Tally the ones that cost the caller.

HONEST CALLS THAT COST US

- 3 Write why a costly honest call is still a success.

✦ DID YOU KNOW?

Many modified games used in schools are designed so that **inclusion is the point**, not an extra. A rule that quietly sits two children out is the wrong rule for this barn.

🚩 STAY SAFE

Competitive does not mean contact. The person with the ball is allowed to keep it; the other person backs off. If someone is on the floor, the game has already stopped.

▲ FIELD CHALLENGE

Can you keep the rule when your team would rather not? Next goal, your team decides together whether it counted. If you cannot agree in ten seconds, it did not.

UNIT 5 - TOPIC 5.4

Asking well

■ WHAT YOU NEED ON THE FIELD

A task that genuinely needs help: moving a bench, a sequence a pupil cannot yet join, a rota that has stuck. Groups of four.

◆ WARM UP

Practise the sentence out loud, standing still: "I need help with X, because Y."
Then a short jog.

Asking is a skill with a posture. Tuft has a paw up. Rowan is already walking over. The bench is still on the ground. Look: Tuft is not struggling in silence, and he is not grabbing Rowan. That is the moment.

◆ WHAT HAPPENED

Tuft cannot move the bench. He wrestles it, it scrapes, and an adult has to cross the hall.

The better version is earlier: "I need a second person for this bench, because it needs two." That is help-seeking, not a confession.

► Learn

Ask:

- **soon enough** (before it is unsafe)
- **specifically** (what, not "help")
- **to the right person** (a teammate first, an adult if it is safety kit)
- **then use the help** (do not ask and keep wrestling)

Help-seeking is on the scheme because PE is full of moments where pride is the risk.

• Your turn

- 1 Write one thing in today's lesson you will ask for help with on purpose, even if you could almost manage.

WHAT I WILL ASK, AND WHO

- 2 Ask. The helper ticks: was it specific, was it on time?
- 3 Swap. Be the helper who arrives without taking the whole task away.

STAY SAFE

Benches, mats in stacks, and anything above head height are always two-person jobs. Asking is not optional there. It is the method.

▲ FIELD CHALLENGE

Can you ask before you get stuck? The best help-seeking is a question at the start of the station, not a shout at the end.

UNIT 5 - TOPIC 5.5

Feedback a body can use

■ WHAT YOU NEED ON THE FIELD

One skill from earlier in the book, pairs, the three-tick cards from 2.3.

✦ WARM UP

Watch a partner do three goes in silence. Then speak. The silence is to stop you talking too soon.

Feedback is a pointing finger and a calm face. Willow names Sorrel's landing foot. Sorrel is listening, not looking at the floor. Pip waits. Nothing about this picture is a judgement of a person.

◆ WHAT HAPPENED

"You're amazing" and "that was rubbish" are the same mistake. Neither names a part to change.

Year 5 feedback sounds like Willow: *Your landing foot went down behind you. Next go, plant it under your hip.*

► Learn

Constructive and specific:

INSTEAD OF	SAY
Good job	The catch was quiet, two hands, eyes on the ball
That was bad	The throw left below the shoulder; try the elbow tick
Try harder	Do the same throw at half speed, three times

Respect is the tone. Specific is the content. You need both.

• **Your turn**

- 1 Three goes. After each, one sentence from your partner in the Willow shape: what I saw, what to try.

THE MOST USEFUL SENTENCE I HEARD

- 2 Thank them. Then you feed back on their next three.
- 3 Write one goal (from 4.3) that came out of the feedback.

🚩 **STAY SAFE**

Feedback is given to the side of the activity, not shouted across a game. Never during a jump, a landing, or a bowl.

▲ **FIELD CHALLENGE**

Can you give feedback that names a strength and a next step in one breath? If the mover only hears the next step, you have still left half of it out.

The barn agreement

The class writes a five-line barn agreement and then runs a six-station afternoon using it.

- 1 How we collect kit.
- 2 How we split a station.
- 3 How we call a fair line.
- 4 How we ask for help.
- 5 How we put it all back.

Then you play. At the end, the barn is checked against line 5 before anybody lines up.

☐ LOOK WHAT I CAN DO

- ☐ I can share kit so nobody sits out
- ☐ I can keep a split I agreed
- ☐ I can make an honest call that costs my team
- ☐ I can ask for help specifically and on time
- ☐ I can help without taking the task away
- ☐ I can give feedback a partner can act on
- ☐ I can name a strength as well as a next step
- ☐ I can leave the barn ready for the next group

How did it go?

WHAT YOU WERE WORKING ON	TODAY
Sharing kit and space	☐ ☐ ☐
Keeping an agreement	☐ ☐ ☐
Fair play when it cost us	☐ ☐ ☐

WHAT YOU WERE WORKING ON	TODAY
Asking well	
Feedback a body can use	

ONE RESPONSIBILITY I KEPT, AND ONE I STILL DROP WHEN THE GAME GETS FAST

Words we used

WORD	WHAT IT MEANS ON THE FIELD
share	Count, rota, adapt the game, return the kit.
negotiate	A split both people can say yes to, then keep.
fair play	Honest calls, including the ones that cost you.
help-seeking	Ask soon, specifically, to the right person.
feedback	What I saw, and what to try. Nothing about the person.
respect	The tone that lets the content be heard.

6 Healthy bodies

What is happening inside you while you move, and what a working body needs: effort, joints, intensity, safe risk, a real warm-up, water and ordinary food. Still a PE book, not a clinic.

✓ ON THIS GROUND YOU WILL

6.1

say why regular activity is good for you, in your own words

6.2

name joints, muscles and a fitness component you are using

6.3

compare easy, medium and hard work in the same session

6.4

spot a risk and change the task before anybody is hurt

6.5

lead a warm-up and a cool-down that match the lesson

6.6

choose a drink and a snack that help you play this afternoon

○ COME OUT TO THE FIELD

You have spent five units on what a body can do. This path is about what a body **is**, while it does it.

Keep it practical. If a sentence cannot change what you do on Thursday, it does not belong on this ground.

UNIT 6 - TOPIC 6.1

Why we bother

■ WHAT YOU NEED ON THE FIELD

A measured loop (the beacon path, or four sides of the field), notebooks, a way to time one minute.

◆ WARM UP

Walk one loop talking. Then jog one loop without talking. Notice the difference in your breathing. That notice is the lesson starting.

Effort you can read. Pip has just finished a short sprint. Hands on knees, breathing, still in control. Look at the whole body: this is work, not distress. That difference is one you must be able to tell.

◆ WHAT HAPPENED

Tomás says PE is only for people who like sport.

Willow: Your heart, your mood and your sleep do not care whether you like the league table. They care whether you moved today.

► Learn

Regular physical activity helps:

WHAT	IN YEAR 5 WORDS
Heart and lungs	They get better at the job of carrying you
Bones and muscles	They get used to loads, so everyday jobs feel lighter
Mood	Many people feel clearer after they have moved
Sleep	A used body often sleeps more easily
Friendship	Games are one of the ways a class learns to share a job

The NHS guideline you met in Unit 1 still stands: children aged 5 to 18 should aim for an **average of at least 60 minutes** of moderate or vigorous activity a day across the week, and a mix of types.

This book is not the whole 60 minutes. It is how you get good at using them.

✦ DID YOU KNOW?

The 60 minutes can be built up in shorter bursts. A walk to school, a break-time game and this lesson can sit in the same day. It does not have to be one heroic hour.

● Your turn

- 1 After one easy loop and one harder loop, write what changed in your breathing and in your legs.

WHAT CHANGED

- 2 List three ways you already move in a normal week that are not a PE lesson (walking, playing, swimming, dancing, cycling).
- 3 Write one sentence you could say to a friend who thinks PE is only for "sporty" people.

STAY SAFE

If anyone feels dizzy, chest pain, or cannot speak a few words while moving, they stop and tell an adult. Competitive finishing is never worth that.

FIELD CHALLENGE

Can you name one activity you will add this week that is not a match? A walk after dinner counts. Write when, and how you will know you did it.

UNIT 6 - TOPIC 6.2

Joints, muscles, fitness

WHAT YOU NEED ON THE FIELD

Open space, a mat, a wall, notebooks. Work in pairs: mover and namer.

WARM UP

Slow joint circles: ankles, knees (small), hips, shoulders, wrists. Then ten easy squats to a sitting height, no weight.

A jump is a sentence written in joints. Sorrel at the top of the jump: knees, hips and shoulders all doing a job. There are no labels drawn on her, because you are about to supply them.

◆ WHAT HAPPENED

A class is skipping. Ana says her "legs are working".

Willow: Which joints? Which muscles? "Legs" is a paragraph. "Knees bending and the muscles at the front of the thigh straightening them" is a sentence a doctor, a coach and a Year 5 pupil can share.

► Learn

A **joint** is where two bones meet and movement is allowed. A **muscle** pulls; it cannot push. **Fitness components** at this age, in this book:

COMPONENT	IN A LESSON IT LOOKS LIKE
Stamina	Keeping a jog going without stopping
Speed	A short sprint
Strength	Holding a shape, carrying a mat, a slow squat

COMPONENT	IN A LESSON IT LOOKS LIKE
Flexibility	A comfortable range, never a forced stretch
Coordination	Hands and feet doing different jobs at once
Agility	Changing direction without falling over
Balance	A still shape that does not wobble

PHASE STRIP 6.2 • A SQUAT, NAMED

1 Hips ball-and-socket joints, sit back as if toward a chair	2 Knees hinge joints, bend over the feet, not caving in	3 Thighs muscles at the front work as you stand up	4 Finish hips and knees straight, you can still breathe
--	---	--	---

You do not need a Latin name to be accurate. You need the joint, the direction and the job.

■ WATCH ONE DONE WELL

Bramble names a throw. Shoulder (ball and socket) takes the arm back. Elbow (hinge) stays high. Muscles of the shoulder and the back of the arm bring the arm through. That is 6.2 done on a skill from 1.1.

• Your turn

- 1 Choose a skill. Name two joints and one muscle group it uses.

SKILL, JOINTS, MUSCLE GROUP

- 2 Name the main fitness component of that skill, and one other component hiding in it (a sprint also needs coordination of arms and legs).
- 3 Partner checks: can they see the joints you named when you move?

 STAY SAFE

No loaded strength work. Bodyweight only. Flexibility is a comfortable range. If it hurts, it is not flexibility work, it is a stop.

 FIELD CHALLENGE

Can you change the component without changing the skill? The same travel, once for stamina (steady), once for agility (lots of turns). Watcher names which is which.

UNIT 6 - TOPIC 6.3

Easy, medium, hard

 WHAT YOU NEED ON THE FIELD

A loop, a watch, a way to talk while moving. Pairs.

 WARM UP

Walk and talk: can you speak in full sentences? That is easy. Then a jog: can you speak in short phrases? Medium. Then a five-second burst: can you only gasp a word? Hard. Stop.

Same path, two intensities. Bramble walks in the foreground. Sorrel runs further up. The hill has not changed. The work has. That is the whole of this topic, drawn on one path.

◆ WHAT HAPPENED

A class does "the same warm-up" every week at a sprint. Two pupils hate PE because they start tired.

Intensity is a choice. Starting at hard is not keen. It is unprepared.

► Learn

Intensity is how hard the work feels.

TALK TEST	INTENSITY	WHEN TO USE IT
Full sentences	Easy	Warm-up, cool-down, recovery
Short phrases	Medium	Most of the lesson
One word, or none	Hard	Short bursts, with a rest after

You compare tasks by this, not by whether you "like sport". A dance phrase can be hard. A walk up the beacon path can be medium.

■ WATCH ONE DONE WELL

Sorrel's three laps. Lap 1 walk (easy). Lap 2 steady jog (medium). Lap 3 four short bursts with a walk between (hard plus recovery). Same path, three intensities, one notebook row each. That is a plan, not a mood.

● Your turn

- 1 Run, jog or walk three tasks you already know. Mark each E, M or H using the talk test.

TASK	E / M / H	HOW I KNEW
------	-----------	------------

- 2 Rewrite the middle one so it becomes a different intensity (add rest, or add a burst).
- 3 Plan a six-minute block: easy, medium, hard, easy. Write the times.

MY SIX-MINUTE INTENSITY PLAN

■ STAY SAFE

Hard work is short. If someone cannot slow down when asked, the next block is easy, not another burst. Hard is not a punishment.

▲ FIELD CHALLENGE

Can you keep medium when you want to sprint? Two minutes of phrase-talk jogging. If you go silent, you went hard without meaning to.

UNIT 6 - TOPIC 6.4

Risk you can see

■ WHAT YOU NEED ON THE FIELD

A station that has real (small) risks: a bench, a ball, a wet patch marked with cones, a wall. Groups of four, one adult in earshot.

✦ WARM UP

Walk the space as a group and point, in silence, at three things that could go wrong. Then say them.

◆ WHAT HAPPENED

There is a bag on the run-up. Three pupils jump it for fun. The fourth trips.

The risk was visible. The preparation was not done. 6.4 is the habit of looking **before** the first go, not after the first fall.

► Learn

Risk here means something that could reasonably hurt somebody in this lesson. You:

- 1 **See it** (bag, wet, bench rocking, sun in eyes).
- 2 **Change it** (move, dry, test, turn the task).
- 3 **Tell an adult** if you cannot change it.
- 4 **Keep checking** when the station is rebuilt.

Personal responsibility from Unit 5 applies: you do not wait to be the person who trips.

● Your turn

- 1 Write three risks in this space and what you will do about each.

RISK	WHAT WE CHANGE

RISK

WHAT WE CHANGE

- 2 Rebuild a station. Walk it again. One new risk will have appeared (a cone in a run-up is the usual one).
- 3 Practise the sentence: "We are not starting yet because..."

THE SENTENCE

STAY SAFE

You never test a risk by trying it. Wet grass is not a slide. A rocking bench is out until an adult resets it. Pain or injury is reported, not worked through.

FIELD CHALLENGE

Can you make a task safer without making it smaller? Example: same jump, mat moved to where people actually land, not where the diagram said they would.

UNIT 6 - TOPIC 6.5

Warm up, cool down

WHAT YOU NEED ON THE FIELD

Open space, a lesson plan for what comes next (a throw, a game, a dance). Groups of six, rotating leader.

✦ WARM UP

Do a bad warm-up on purpose for twenty seconds: a hard stretch on a cold muscle, then a sprint. Stop. Talk about why that was the wrong order. Then do the real one.

A warm-up is a circle that looks easy. Arm swings, ankle circles, a jog on the spot. Nobody is stretching a cold muscle hard. Morning light, companionable, ready. That is the picture to copy.

◆ WHAT HAPPENED

A leader starts with the splits. Two people pull a face and copy badly.

The order is the content: pulse raiser, then mobile joints, then a little of the skill you are about to do. Stretching long and hard belongs later, if it belongs at all.

► Learn

PART	WARM-UP	COOL-DOWN
Heart	Raise it gently	Bring it down: walk, not sit

PART	WARM-UP	COOL-DOWN
Joints	Easy circles through a comfortable range	The same, slower
Skill	A gentle version of what is coming	Not needed
Talk	Can still speak	Can speak in sentences again

Warm-ups last a few minutes, not a whole lesson. Cool-downs are not optional on a hot day or after hard bursts.

■ WATCH ONE DONE WELL

Rowan leads for a throwing lesson. One minute easy jog. Twenty ankle and shoulder circles. Ten standing throws at half speed at a wall. Stop. The class is ready to practise a phase, not still waking up.

• Your turn

- 1 Write a warm-up for **this** lesson's main skill, in three lines.

PULSE, JOINTS, SKILL

- 2 Lead it. Followers tick: did we raise the pulse, did anything hurt, were we ready?
- 3 After the work, lead a two-minute cool-down: walk, slower circles, water.

■ STAY SAFE

No bouncing stretches. No forcing a range. Footwear on unless the teacher has said otherwise. Hydration is part of the cool-down, not a reward.

▲ FIELD CHALLENGE

Can you change the warm-up when the lesson changes? If the next activity is dance, the skill rehearsal is travelling phrases, not wall throws.

UNIT 6 - TOPIC 6.6

Water and ordinary food

■ WHAT YOU NEED ON THE FIELD

Water bottles (every pupil), a still-life of ordinary snacks for looking at only, notebooks. No sharing of food. No weighing, no body talk.

✦ WARM UP

Drink water. Then a short easy jog. That is not a joke. Starting thirsty makes everything feel harder.

What a working afternoon looks like, on a bench. Water, an apple, a handful of ordinary nuts, a folded cloth, a rope. No labels, no brands, no lecture. Look at the bottles: they are the main character.

◆ WHAT HAPPENED

It is a hot June sports afternoon. Two pupils have had nothing to drink since breakfast. They last twelve minutes.

This is not a nutrition textbook. It is the practical fact that a body at work needs **water**, and that an ordinary mixed plate across a day helps you play. No food is "good" or "bad" as a moral. Some choices help this afternoon more than others.

► Learn

Keep it small:

- Drink water across the day, and extra when it is hot or the work is long.
- A piece of fruit, some bread, yoghurt, nuts if you can eat them: ordinary food that travels to a sports afternoon.
- Sweets just before a sprint do not replace a lunch you skipped.
- Sleep is part of recovery. So is a cool-down. So is not playing on an injury.

A **varied, balanced diet** means different foods across the week, not a perfect plate at every meal. This book will not tell you what to eat at home. It will tell you not to start Athletics Day on an empty bottle.

✧ DID YOU KNOW?

The NHS Eatwell Guide describes a varied diet as a mix of fruit and vegetables, starchy foods, proteins and dairy or alternatives, with less of foods high in salt, sugar and saturated fat. You do not need to memorise a plate. You need water in your bag.

● Your turn

- 1 Check: did you bring water today? If not, where will you get some before the next burst?
- 2 Plan a sports afternoon bag in words: drink, one ordinary snack you actually eat, a spare layer.

MY AFTERNOON BAG

- 3 Write one recovery habit that is not food: sleep time, a cool-down, or telling an adult about a pain.

STAY SAFE

No child is asked what they weigh, what they ate, or what their body looks like. Allergies are private: do not share food. If someone feels unwell, they stop and tell an adult.

▲ FIELD CHALLENGE

Can you finish a lesson still able to talk, having drunk something? That is the check, not a score.

The beacon plan

In pairs, write a one-page plan for a 20-minute session another pair could lead:

- 1 Why this activity (6.1).
- 2 Joints and components you will name (6.2).
- 3 Easy / medium / hard blocks (6.3).
- 4 Risks you will walk first (6.4).
- 5 Warm-up and cool-down (6.5).
- 6 Water (6.6).

Then swap plans and lead ten minutes of someone else's. The plan is the assessment.

☐ **LOOK WHAT I CAN DO**

- ☐ I can say why moving regularly helps, without saying "because sport is good"
- ☐ I can name two joints and one muscle group in a skill I do
- ☐ I can name a fitness component I was using
- ☐ I can use the talk test to mark easy, medium and hard
- ☐ I can change a task when I see a risk
- ☐ I can lead a warm-up that matches the lesson
- ☐ I can lead a cool-down that brings the pulse down
- ☐ I can put water in the plan, not only in a lecture

How did it go?

WHAT YOU WERE WORKING ON	TODAY
Knowing why the work is worth it	☐ ☐ ☐
Naming joints and components	☐ ☐ ☐
Choosing an intensity on purpose	☐ ☐ ☐
Spotting a risk before we started	☐ ☐ ☐
A warm-up that matched the lesson	☐ ☐ ☐
Water and recovery as part of PE	☐ ☐ ☐

THE HABIT I WILL KEEP THIS WEEK, AND HOW I WILL KNOW I KEPT IT

Words we used

WORD	WHAT IT MEANS ON THE FIELD
wellbeing	Feeling able to work, play and rest, not only "not ill".
joint	Where two bones meet and movement is allowed.
muscle	Tissue that pulls to move a joint.
stamina	Keeping going at a medium effort.
intensity	How hard the work feels (talk test).
risk	Something that could reasonably hurt somebody here.
warm-up	Pulse, joints, a little of the skill.
cool-down	Walk the pulse down, then water.
recovery	Rest, sleep, water, not playing on a pain.
hydration	Drinking enough water for the work and the weather.

Answers for every unit

Willow reads her notes back. Five friends listening and nobody moving. This is what the rest of this section is for: not marks out of ten, but somebody saying exactly what they saw so the mover knows what to change.

Most of the work on the Practice Strip happens in a body rather than on a page, so most of these are **acceptance criteria** rather than single answers: what a correct response has to contain, whatever words a pupil uses. Where there is one right answer, it is given.

Topic 1.1 • Practise that changes a skill

Phase 2, done right. The elbow is above the shoulder, the other arm is pointing at the target, and the head is up. This is the position Tuft held six times before he threw at all. Compare it with what your watcher wrote.

TASK

ANSWER, OR WHAT A CORRECT ANSWER CONTAINS

The phase strip: how many phases and how many joins in an overarm throw?

Four phases (stand, reach, release, finish) and **three joins**. A movement always has one fewer join than it has phases.

TASK	ANSWER, OR WHAT A CORRECT ANSWER CONTAINS
1. The one part I am changing	Names one phase or one join, and describes it as something a body part does. Accept "elbow above my shoulder before release". Do not accept "throw better", "be more accurate" or "concentrate", none of which a watcher can see.
2. The tally	Two rows filled in, with the "after" round done on the same day as the "before" round. A pupil whose second tally is worse has still completed the task correctly.
4. What changed, and how I know	Must contain evidence : a number, or something the watcher said. "It felt better" is not yet an answer; ask what the watcher saw.
5. Did the whole throw change?	Either answer is correct. A pupil who reports "my elbow got better and the ball still arrives low" has done the task properly and has found something genuinely worth discussing.
Why was Willow right that thirty throws was "one throw, thirty times"?	Because nothing was being changed between attempts, so no phase and no join received any attention. Repeating is not practising.

Topic 1.2 • Joining skills into a sequence

The join, close up. Both feet together and flat, knees deeply bent, tail out for balance. A landing that looks like this can become a balance without a second foot going down. That is the whole of join 2 into 3.

TASK	ANSWER, OR WHAT A CORRECT ANSWER CONTAINS
What is a sequence judged on?	The joins , not the skills.
Bramble's sequence: where are the two joins?	Run into jump, and jump into balance.

TASK	ANSWER, OR WHAT A CORRECT ANSWER CONTAINS
Why did taking two strides off the run up fix the last join?	He arrived at the landing travelling more slowly, so he no longer needed a second foot down to stop. A join is usually fixed earlier than the place where it goes wrong.
1. My sequence	Three named parts in a fixed order, and both joins named.
2 and 4. The two timing tables	Three attempts in each, timed, with stops counted by the watcher rather than by the mover. Improvement is not required; a filled table with honest numbers is a complete answer.
3. What happens at my worse join	Describes body movement: an extra step, a foot put down, a turn of the shoulders, a stop to look. Not "I mess it up".
5. The plan drawing	Contains all five marks: start ring, dashed route, crosses for equipment, and an arrow showing the facing at the end. The arrow is the one most pupils leave out.
Field challenge	Four parts, three joins, two seconds faster than their best three part time, zero stops. Making one part smaller in order to achieve it is expected and should be praised, not treated as a compromise.

Topic 1.3 • Control, fluency and variety

One hare, two levels. Same animal, same vest, same distance to cover. On the left she is upright and fast. On the right she is low and slow. If your four versions do not look at least this different from one another, the dial has not been turned far enough.

TASK	ANSWER, OR WHAT A CORRECT ANSWER CONTAINS
Name the three dials.	Speed, level and path.

TASK	ANSWER, OR WHAT A CORRECT ANSWER CONTAINS
What do control, fluency and variety each mean?	Control: the body does what the pupil decided. Fluency: it does it without stopping or wobbling. Variety: the pupil can decide differently next time.
Why did telling Sorrel to go slower not work, and why did the cones work?	Being told to change a dial does not give the body a reason to change it. The cone rule made low and slow the only way to complete the task , so the setting appeared without being mentioned.
2. The four timings	Four rows, four different dial settings, one observation each from the watcher.
3. The four plan drawings	Same skill in all four boxes. If the skill changes between boxes the task has been misunderstood: only the dial changes.
4. Hardest version	Almost always slow or low , and either is a good answer if a reason is given. Fast is rarely hardest, and a pupil who notices that has understood the topic.
5. When is each version the right choice?	Four plausible moments from a real activity. Accept anything specific: "low when somebody is trying to reach the ball over me", "curved to get round a defender", "slow to arrive at the same time as a pass".
Twelve metres is about what fraction of a lap?	About one thirty third . 400 divided by 12 is 33.3.

Topic 1.4 • Reading the field and the friends on it

Watch the hips. Sorrel's head still faces forward, but her hips have already turned. Tuft is low, balanced, and looking at the right part of her. Feet and eyes can both mislead you; hips cannot.

TASK	ANSWER, OR WHAT A CORRECT ANSWER CONTAINS
Of the five responses in the scenario, which is the skill being taught?	Tuft , who changed without stopping. Not Sorrel, who scored: she carried on playing the old game. Pip did not hear, and Bramble stopped in order to think.
What are the three things a Caller can change?	The rule , the space , or the people . One at a time.
What is the fourth thing that changes with nobody calling it?	What the person opposite you decides to do.
Where should you look, and why?	At the hips . Feet and eyes can both mislead; hips cannot lie about which way somebody is about to travel.
What did Tuft actually do, in order?	Finished the stride he was already in; turned his shoulders square to his direction of travel; took the next step sideways slowly, and only speeded up after the second sideways step landed.
2. The call table	Three calls recorded. Comparing the Caller's record with everybody else's memory is part of the task: disagreement is a result, not a mistake.
3. My call, and whether it was good	A good call changes one thing, is safe, and can be understood in three words. A pupil who judges their own call as poor and says why has answered better than one who says it was fine.
4. Choosing your own activity	Requires a reason linked to this unit: a dial setting it demands, or a job the pupil is weak at. "Because I like it" is not yet a justification; ask which dial it needs.
5. What I am going to copy	Names a pupil and describes an action, not a quality. "Copy Tuft turning his shoulders first" is right. "Tuft is good at games" is not.
Field challenge, the silent call	Nobody is told what changed. Success is the group working it out and carrying on. Twenty seconds of confusion is expected and is the point.

The long field games

The handover. Bramble passing the stopwatch to Rowan, both of them watching it change hands. There is no mark for this in any answer key, and it is the part of the afternoon the whole project is built around: everybody holds every job.

There is no answer key for the meet, and no winner. It is complete when every pupil has held all four jobs, every mover has a record sheet filled in **by their watcher**, and every pupil has written one sentence saying what changed and how they know.

Answers for Units 2 to 6

Most tasks on the field are judged by **what a watcher can see**. Where there is one right answer, it is given. Where the work is a plan, a tally or a phrase, the answer is the acceptance criterion.

Unit 2 • Understanding movement

TOPIC	WHAT A COMPLETE ANSWER CONTAINS
2.1	Three parts: action, place, result. "Good pass" is not an answer. More effective names one visible detail.
2.2	The passer moved after the pass. Freeze names action, dynamic, space and relationship. The plan shows the supporting run as a dashed line into a gap.
2.3	Three ticks a watcher can see. The improvement plan uses a tick, not a score.
2.4	A tactic named in one sentence. Pass-then-move happened on purpose. A goal from a crowded ball does not count in the field challenge.

Unit 3 • Moving creatively

TOPIC	WHAT A COMPLETE ANSWER CONTAINS
3.1	Three named travels. A pair still-shape with a stable base. The same skill used once cooperatively and once competitively.
3.2	Route B is a different path or dynamic, not a slower copy of A. The mover adapts without stopping when a path is closed mid-travel.
3.3	The written problem has a start, a finish and one constraint. The solution was tried in movement, not only talked.
3.4	Four parts, performed twice the same. Watchers can name the theme or mood from what they saw.

Unit 4 • Taking part

TOPIC	WHAT A COMPLETE ANSWER CONTAINS
4.1	All three scales completed. The write-up names which scale taught the next one.
4.2	A named job kept for the whole game. "Most useful" names a patch of grass, not a feeling.

TOPIC	WHAT A COMPLETE ANSWER CONTAINS
4.3	A goal with a number for this lesson. The tally is the partner's, not the mover's.
4.4	A 45-second lead that could be copied. One thing stolen from another leader.
4.5	One strength and one refine, both visible actions. Partner agrees the words are fair.
4.6	Three rules, one change after two minutes, and a note of who waited.

Unit 5 • Taking responsibility

TOPIC	WHAT A COMPLETE ANSWER CONTAINS
5.1	A rota that uses everybody. Kit number at the end matches the start. Nobody sat out.
5.2	A split both people said yes to, and then kept.
5.3	At least one honest call that cost the caller's team. That still counts as success.
5.4	The ask names the thing and the person. It comes before the task is unsafe.
5.5	Feedback in the shape "what I saw, what to try". A strength and a next step.

Unit 6 • Healthy bodies

TOPIC	WHAT A COMPLETE ANSWER CONTAINS
6.1	What changed in breathing or legs after two intensities. One non-PE way they already move.
6.2	Two joints and one muscle group, named on a real skill. One fitness component.
6.3	Three tasks marked E / M / H with the talk test. A six-minute plan that includes easy work.
6.4	Three risks with a change for each. The sentence "We are not starting yet because..."
6.5	Pulse, joints, skill rehearsal, in that order. A cool-down that is a walk, not a sit.
6.6	Water in the bag. No body talk. One recovery habit that is not food.

Sources and checks

Everything put away, and the light going. One bench against the pavilion, a coiled rope, a stack of cones and one peg still in the ground. Field rule 7 says put the equipment back without being asked, and this is what that looks like when everybody has.

Every fact and every square code destination in this unit, with the date it was checked. The full check record, including the sources that were considered and rejected, is in this book's 05-SOURCES-01.md.

Facts

PRINTED IN	CLAIM	SOURCE	CHECKED
Topic 1.1	Children and young people aged 5 to 18 should aim for an average of at least 60 minutes of moderate or vigorous intensity physical activity a day across the week, and a variety of types and intensities across the week to develop movement skills, muscles and bones	NHS, <i>Physical activity guidelines for children and young people</i> , nhs.uk	2026-08-11
Topic 1.3	The 400 metres is an event in which athletes complete one lap of a standard outdoor 400 m athletics track while running in a designated lane	World Athletics, discipline page for the 400 metres, worldathletics.org	2026-08-11
Topic 6.1	Same 60-minute guideline restated for the year	NHS, <i>Physical activity guidelines for children and young people</i> , nhs.uk	2026-08-19

PRINTED IN	CLAIM	SOURCE	CHECKED
Topic 6.6	A varied diet draws on fruit and vegetables, starchy foods, proteins and dairy or alternatives	NHS Eatwell Guide, nhs.uk	2026-08-19

The fraction in the second panel, twelve metres as about one thirty third of a lap, was checked by calculation.

Square codes

PRINTED IN	WHERE IT GOES	WHAT IT IS FOR	CHECKED
Topic 1.2	youthsporttrust.org, free resources	60 second challenges, repeated and measured against a pupil's own last attempt	2026-08-11
Topic 1.4	nhs.uk, Healthier Families activities	An A to Z of sports and activities to choose your own from, and games you can vary	2026-08-12

Both destinations were open, free and required no login when this edition went to press. **An adult holds the device and opens the page.** Neither task needs a device in order to be finished.

Illustrations

All twenty-three illustrations in this book are original, produced for Prime School. The Prime School device is composited from the original artwork and was never redrawn.

Curriculum

The unit is mapped to the school's own scheme of work for Year 5 Physical Education, objectives 1.1 to 1.4. The mapping is printed in **For teachers** on the next page.

For teachers

What this edition contains

The **whole Year 5 Physical Education student book**: six units, 29 scheme objectives, original Prime prose. It is a candidate for OUTPUT after the first page-by-page QC. It is **not READY** until a second independent QC, a wrap without print specs, and an Amazon information file.

Curriculum mapping

Twenty-nine objectives, one topic each, taken from the school's scheme of work for Year 5 Physical Education. Unit 1 is tabulated below; Units 2 to 6 follow the same 1:1 map in 06-SCHEME-MAP.md.

TOPIC	SCHEME OBJECTIVE
1.1 Practise that changes a skill	1.1 Practise, refine and consolidate a broad range of movement skills
1.2 Joining skills into a sequence	1.2 Perform and be able to link together a wider variety of movement skills in short sequences
1.3 Control, fluency and variety	1.3 Display movement skills that demonstrate increasing control, fluency and variety
1.4 Reading the field and the friends on it	1.4 Apply movement competence with confidence in a variety of self-selected and more structured physical activities, showing the ability to respond and adapt to changing contexts and to others' movements, responses and roles

The scheme allocates 89 minutes to each objective. Every topic here is built to be delivered across two lessons rather than one, with the second lesson beginning at **Your turn**.

The assumptions this unit makes

- **A pupil cannot practise a whole skill.** Every task therefore asks for one phase or one join, chosen and named before anybody moves. If a class is choosing targets like "throw better", the unit has not started yet.
- **The joins carry the objective.** Objective 1.2 is assessed on the joins and not on the quality of the individual skills, which is why the watcher counts stops rather than awarding marks.
- **Variety is the weak point at this age**, not control. Most Year 5 classes contain several pupils with exactly one setting on every dial. Topic 1.3 exists for them, and the cone method in **Try it the other way** is the reliable route in.
- **The Caller is not a game manager.** It is an assessment role. Objective 1.4 asks for adaptation to changing contexts, and a Caller is how that context changes on purpose, in front of you, so you can see who adapts and who stops.

Assessment without a written test

The scheme lists a test in each of the three terms. This unit offers three pieces of evidence that do not need one:

- 1 **The tally tables** in 1.1 and the timing tables in 1.2 and 1.3, which are a pupil measured against their own earlier attempt.
- 2 **Look what I can do**, twelve statements ticked twice in different colours, at the start and the end of the unit.
- 3 **The long field games record sheets**, filled in by watchers rather than by movers.

Nothing in this unit ranks one pupil against another, and no task requires a particular body in order to succeed. Distances, heights and timings are adapted freely: the objective is control, not size or speed.

Safety

Every **Stay safe** panel is an instruction rather than advice, and the panels are the only magenta furniture in the book so that they cannot be mistaken for teaching. The unit assumes a teacher present, a space checked before the lesson, and all apparatus set out and tested by an adult. Topic 1.2 involves a bench, mats and possibly a roll, and asks for adult supervision of every attempt. The track meet runs four stations at once and asks for the whole ground to be walked before it starts.

The three calls a Caller may never make are named on the page: nothing that stops a pupil seeing where they are going, nothing changed twice at once, and nothing called quietly.

What a teacher will want to change

- **Class size.** The unit is written for fours, and for a group of five or six at topic 1.4. With a class of thirty that is seven or eight simultaneous stations, which is more than most halls hold. Running 1.1 and 1.3 as a two station rotation works and is how the timings above were estimated.
- **The wall in 1.1.** If there is no wall that may be thrown at, a partner catching at eight metres works, but the watcher then has two things to look at instead of one. Prefer a wall.
- **The bench in 1.2.** A line on the floor works for pupils who are not ready for the bench, and the objective is unaffected: the joins are still the assessment.

Planning towards the three term days

Each term ends with a whole day on the field, and those days are printed for pupils on **Your year on the long field** in the front matter. For planning, here is the same mapping the other way round.

TERM DAY	HAVE THESE FINISHED FIRST	WHAT THE DAY ADDS
Athletics Day , term 1	1.1 and 1.2 for the standing long jump and the target throw; 1.3 for the obstacle race	Measured distances, and one recorder per station
Football Day , term 2	1.3 for the cone dribble; 1.4 for the full game	A caller for the small-sided games
Multi-sports Day , term 3	1.1 again on an unfamiliar skill; 1.3 for sack racing	A rotation, and a timekeeper who is not the mover

This unit deliberately teaches none of the sports on those days. It teaches the habit all three of them reward: choose one part, change it on purpose, and check with a watcher whether the whole thing got better. A class that has done Unit 1 properly arrives at Athletics Day already knowing how to practise, which is worth more on the day than knowing the rules of any single event.

Open questions on this title, for a project manager

- 1 The approved cover master is still on the Y7 to Y13 abstract line. The interior follows the Y1 to Y7 illustrated line (animals in kit). A wrap in a different register from the interior cannot be READY until the cover is rebuilt.
- 2 The user asked for a wrap with **no back-cover information**. Recorded as a title exception to BOOK-ANATOMY's compulsory back-cover blurb.
- 3 Interior stock: this title prints white. Year 5 and Year 6 Art & Design print cream.

Detail in 01-DESIGN.md section 12.

Teacher tips for the later units sit in the topic **Stay safe** panels and in the scheme map. Distances, heights and timings are adapted freely: the objective is control, not size or speed.

PRIME BOOKS

Physical Education

Student Manual

The objective is control, not size.

S

INSIDE THIS BOOK

- Six units, twenty-nine topics
- The rule of the game, printed on every topic
- A decision to make, with no answer printed
- Adaptations written into every unit
- A round of eight to finish the year
