Student Manual

The Field Notebook

The Field Notebook: Global Perspectives, Year 2, Student Book

First edition, published 2026 by Prime Books, the publishing imprint of Prime School, Lisbon, Portugal.
www.primeschool.pt

Text, illustration, diagrams, page design and typography © Prime School 2026. All rights reserved.

EDITORIAL BOARD

The Prime Books Subject Series is developed under the guidance of the Pedagogical Academic Group for each subject and coordinated by the Pedagogical Team of Prime School. This publication reflects our shared commitment to academic quality, professional integrity and the continuous advancement of teaching and learning.

RIGHTS AND PERMISSIONS

No part of this publication may be reproduced, stored in a retrieval system or transmitted in any form or by any means without the prior written permission of Prime School, with these exceptions: a school that has bought copies of this book may photocopy the pages marked as making space for use with its own pupils, and any person may quote short passages for review, criticism or teaching, with acknowledgement.

This book is meant to be written in. The making spaces, the ruled lines and the field notes pages belong to the pupil whose name is on the field licence. Writing in them is the point of them.

SOURCES, LINKS AND QR CODES

Every factual statement in this book is traced to a published source, and those sources are listed in *Where we found out* at the back. Every QR code was scanned, followed and checked on 3 August 2026, and every destination is printed in full in *Every QR code in this book*, so the book still works with no device at all. Prime School does not control those websites and is not responsible for their content, which may change. An adult opens every code before a child follows it.

ABOUT THE ILLUSTRATION

The cover painting and the interior watercolours were made for this book. Diagrams, maps and charts are drawn as vector artwork, so every label in them is real type and not part of a picture.

EDITION

First edition, 2026. British English throughout. Metric measures. Euros where money appears.

Printed on paper from responsibly managed forests.

Bram checks everything twice. So did we.

Welcome

Five naturalists, one map, six places to go. You are the sixth member of the club.

This is your Global Perspectives book for Year 2, and it is not a book you only read. It is a **field notebook**. You are going to fill it in.

You are six or seven. You already know how to look at something for a long time. This year you will learn the harder half of that: how to listen to somebody who looked at exactly the same thing and saw something else.

There are six **expeditions** in this notebook. On each one you go somewhere, you find things out, you write down what you really saw, and you argue about one huge question that has no answer printed anywhere in the book.

Your guides are the Field Club. Bram, Rufus, Nella, Pip and Tam. They are made up, and they do not always agree with each other. That is the whole point of them.

Four habits for the year. Look carefully. Say *I think*. Listen right to the end. Write it down while you can still see it.

How to use this notebook

Every expedition has the same parts, in the same order, on every page.

This is not a book you only read. It is a book you fill in. Every expedition has the same parts, and once you know them you will always know where you are.

THE PART	WHAT IT IS FOR
Boots on!	A short game to wake your brain up. One minute, no writing
Do you remember?	Something you already know, from Year 1 or from last week
Let us find out	The part where you learn something new. Look at the picture first, then read
Your turn	Your work. Sometimes you circle, sometimes you draw, sometimes you write
Did you know?	A true fact that surprised us when we found it out
From another chair	Rufus and Nella look at the same thing and see something different. Who is right? Both of them
The big question	One huge question with no answer printed anywhere. Argue about it
Field notes	Space for what you saw. Nobody can mark this wrong
Look closer	A little square to scan with your teacher. It takes you somewhere the paper cannot go
New words	The words from that expedition, each one with its own picture
Now I can	Tick the box when you really can do it

One more thing. In this book, questions that begin *Do you think* have no right answer. Do not look for one. Say what you think, listen to somebody who thinks the opposite, and then say what you think again.

Your field licence

Every member of the Field Club carries a licence. Fill yours in, and then it is really yours.

This notebook belongs to

My class

The town and country I live in

Languages I can speak

The Field Club promise. I promise to look carefully, to listen to people who do not agree with me, and to write down what I really saw.

Signed

My thumbprint. Press here. Nobody else in the whole world has this pattern.

DRAW YOURSELF AS A FIELD NATURALIST.

Meet the Field Club

Five naturalists travel with you through this book. They do not always agree.

Bram the badger • Keeper of the Map. Bram measures things and checks them twice. When everybody else is sure, Bram says, let us look again.

Rufus the fox • Chief Question Asker. Rufus asks the question nobody else thought of. Sometimes it is an awkward one. That is usually when it is a good one.

Nella the rabbit • Listener. Nella has the longest ears in the club and she uses them. She always asks how the other person felt about it.

Pip the hedgehog • Collector. Pip is small and slow and misses nothing. Pip comes back with the one tiny thing everybody else walked straight past.

Tam the mouse • Flag Planter. Tam is the smallest and the bravest. Tam gets to the top of the hill first and shouts down what can be seen from up there.

Rufus and Nella look at the same thing on every expedition and see something different. Neither of them is wrong. Learning to hold both pictures in your head at once is what Global Perspectives is.

Your field kit

You do not need much. Real naturalists never did.

TICK	WHAT YOU NEED	WHY
☐	A pencil	Not a pen. Field naturalists change their minds
☐	A rubber	Because of the above
☐	Coloured pencils	For sorting, colouring and marking your map
☐	This notebook	The one in your hands, with your name in it
☐	Your eyes	The most important instrument you own
☐	Your ears	The second most important. Most people forget these
☐	Your teacher	For the little squares, and for the big questions

FIELD NOTES

Draw one more thing you would take on an expedition, and write why.

Getting set up: the six Field Club rules

Read these with your class on the first day. Then put them on the wall, because everybody forgets rule two.

- 1 Look before you speak** Spend a whole minute looking at a picture before anybody says anything. You will see three more things in the second half of that minute.

- 2 **Say I think, not it is** In this subject most sentences begin with *I think*, *I noticed* or *I wonder*. That is not being unsure. That is being honest.
- 3 **Listen right to the end** Nella's rule. Let the other person finish their whole sentence, even the part you already disagree with. 
- 4 **Ask one more question** Rufus's rule. When you think you understand, ask one more question. That is usually where the interesting bit is hiding. 
- 5 **Nobody is a stranger's story** When we look at how somebody else lives, we look at what they can do, not at what they do not have.
- 6 **Write it down while you can still see it** Bram's rule. A field note written tomorrow is not a field note. 

LOOK CLOSER

Every child in the world has rights, and somebody wrote them all down. Read the list made for children.

<https://www.unicef.org/child-rights-convention/convention-text-childrens-version>

FIELD NOTES

Which rule will be hardest for you? Write its number and why.

How the little squares work

A little black and white square, and a teacher holding the camera.

All through this book you will find little black and white squares. Each one is a door. Behind it is something the paper simply cannot do: a sound, a film, a place you can spin round and look at from every side.

Every single square in this book was opened and checked by a real person before the book was printed. Every one is free, and none of them asks for your name.

- 1 Find your teacher** Never scan a code on your own. That is the rule, and it is not because we do not trust you.
- 2 Point the camera** Hold a phone or a tablet camera over the little square. You do not need to press anything.
- 3 Read the promise first** Every square in this book says what it will show you. If it does not sound interesting, do not go.

4

Come back to the page The square takes you somewhere the paper cannot go. Then you come back and write what you found.

LOOK CLOSER

Try one now. This square tells you who invented the little square, and what the two letters Q and R actually stand for.

https://en.wikipedia.org/wiki/QR_code

If you have no phone or tablet, nothing is lost. Every address in this book is printed in full at the back, under *Every QR code in this book*. A library computer will do just as well.

The world you are going to look at

The Field Club map. It is drawn simply on purpose: it is for finding places, not for measuring them.

Every place this notebook visits has a flag on this map. Find the one you live in first. Put your finger on it.

1

Put your finger on the country you live in. Say its name out loud.

- 2 Find the dotted line across the middle. That is the **equator**. It is the hottest part of the world.
- 3 Find one country you would like to visit. Write its name. (write-on)

LOOK CLOSER

Spin and explore a big world map with your teacher, and find the country you live in.

<https://www.mapsofworld.com/kids/>

FIELD NOTES

Which expedition are you most looking forward to? Write its number and its name.

UNIT 1 • THE PLAYING FIELDS • TERM 1

Sports and recreation

The Playing Fields

Where the Field Club runs, jumps and argues about the rules

Is a game still a game if nobody wins?

GAMES

BODIES

FAIR PLAY

WEATHER

Getting started

Field Club is here!

Bram has drawn a map of the playing field. Rufus has already run across it twice. Nella wants to know who was left standing at the edge. Pip has found a lost glove, and Tam is on top of the goalpost shouting that from up here you can see three games at once.

On this expedition you will

- Ask your class which game they love best, and count the answers up
- Sort games into the ones that need a room and the ones that need a field
- Learn to play a real game from Ghana, from India and from Portugal
- Find out what happens inside you when you run
- Work out why some rules are there to keep you safe
- Meet players who are blind, and find out how they play

The big question, note printed beside it

Rufus says a game with no winner is just running about. Nella says the best afternoon she ever had was a game nobody won. Ask five people. Write down who said what. Do not try to settle it.

My favourite sport and game

Everybody in this class chose a different game, and every single one of them thought theirs was best.

DO YOU REMEMBER?

In Year 1 you learned the word **favourite**. What is your favourite colour? Now say your favourite game.

BOOTS ON!

Stand up. Show your favourite game with your body, but no words and no sounds. Can the class guess it?

LET US FIND OUT

Your favourite game is not everybody's favourite game. That sounds obvious. It is one of the most useful things you will learn all year.

When a whole class counts up its answers, that is called a survey. You write one mark for every person. Five marks get a line through them, so they are easy to count.

OUR CLASS SURVEY		ONE MARK FOR EVERY PERSON
football		
skipping		
tag		
hide and seek		
cards		
chess		

FIVE MARKS GET A LINE THROUGH THEM

YOUR TURN

- 1

Ask six people in your class which game they love best. Put one mark in the chart for every answer.
- 2

Which game got the most marks?
The game with the most marks was
- 3

Was your own favourite the winner?

yes

no

DID YOU KNOW?

More countries play football than there are countries in the United Nations. There are 211 football teams and only 193 countries. Some places have a team but are not a country of their own.

FROM ANOTHER CHAIR

- *Rufus says:* There is one winner, so there is one best game. Count the marks and you can see it.
- *Nella says:* The game with the fewest marks was somebody's favourite too. That person is sitting right next to you.
- *Then:* Bram's question: does the game with the most marks become the best game, or just the most popular one? They are not the same word.

FIELD NOTES

Draw yourself playing your favourite game. Write one sentence saying why you love it.

Indoor and outdoor games

Rain outside, so the hall becomes the field.

Some games need four walls. Some games need a whole field. And a few clever ones do not mind either way.

DO YOU REMEMBER?

Which games did you play when it rained all week?

BOOTS ON!

Name an indoor game and an outdoor game. Now name one that is both. Thirty seconds.

LET US FIND OUT

An indoor game usually needs a smooth floor, a small space and a quiet voice. An outdoor game usually needs room to run and does not mind noise or mud.

But look at the middle of the rings. Skipping works in a hall and in a yard. So does catch. Sorting things nearly always leaves something in the middle, and that is not a mistake.

INDOORS

BOTH

OUTDOORS

YOUR TURN

- 1 Write each game into the right ring above. Two of them belong in the middle.

above

football

skipping

chess

tag

hide and seek

cards

- 2 Tick the game that is BOTH indoors and outdoors.

DID YOU KNOW?

Sorting into two rings that overlap is a real tool that scientists use every day, and you have just used it.

LOOK CLOSER

Watch sepak takraw. It is like volleyball, but nobody is allowed to use their hands, and the players kick above their own heads.

https://en.wikipedia.org/wiki/Sepak_takraw

FIELD NOTES

Invent a game that only works indoors. Give it a name and one rule.

UNIT 1 - TOPIC 1.3

THE PLAYING FIELDS

Traditional games around the world

Four games, four countries, and not one of them needs a screen.

DO YOU REMEMBER?

Do you remember a game your grandparents played when they were small? Ask them tonight.

BOOTS ON!

Try the kabaddi chant. Say kabaddi, kabaddi over and over without stopping. How far can you walk before you have to breathe?

LET US FIND OUT

In Ghana, children play oware on a wooden board with two rows of six holes and forty eight seeds. You scoop up the seeds and drop them one by one into the holes going round.

In India, kabaddi is played with no ball at all. One player runs into the other team's half and has to chant kabaddi, kabaddi all the way there and all the way back, so everybody can hear that they have not taken a breath.

Here in Portugal, people play jogo da malha by throwing a flat metal disc at a small wooden peg in the ground. In France they roll heavy metal balls at one tiny wooden ball instead.

FOUR GAMES, FOUR COUNTRIES

YOUR TURN

1 Draw a line from each game to the country it comes from.

oware

India

kabaddi

France

jogo da malha

Ghana

petanque

Portugal

2 Which one would you most like to try?

I would like to try

LOOK CLOSER

Look at real oware boards carved from wood, photographed in museums all over the world.

<https://commons.wikimedia.org/wiki/Category:Oware>

FIELD NOTES

Which game in this lesson is most like a game you already play? Write both names and what is the same about them.

Why do we exercise?

Hand on your chest. Can you feel it? That is your heart doing its job.

DO YOU REMEMBER?

What happens to your breathing when you run up a hill?

BOOTS ON!

Twenty seconds of running on the spot. Then hand on chest. Say what you notice.

LET US FIND OUT

Put your hand flat on your chest and sit still. Now run on the spot for twenty seconds and put your hand back. Your heart is beating faster, because your legs asked for more blood and your heart is delivering it.

Doctors all over the world worked together and agreed on one number: children should move their bodies for at least sixty minutes every single day. That is one hour. Running counts. Dancing counts. Climbing counts.

COLOUR ONE BOX FOR EVERY TEN MINUTES YOU MOVED

ONE WHOLE HOUR

10 MIN	20 MIN	30 MIN	40 MIN	50 MIN	60 MIN

YOUR TURN

- 1 Count how many minutes you moved yesterday. Colour one box above for every ten minutes. Six boxes is sixty minutes.
- 2 Did you fill all six boxes? What could you do today to fill one more?

Today I could

DID YOU KNOW?

Your heart is a muscle about the size of your own fist, and it never once takes a day off.

LOOK CLOSER

This is the real page where the world's doctors wrote down that sixty minute rule. Your teacher can read it with you.

<https://www.who.int/news-room/fact-sheets/detail/physical-activity>

FIELD NOTES

Draw the thing you do that makes your heart beat fastest.

Playing safely

DO YOU REMEMBER?

Why do we walk, and not run, when the floor is wet?

LET US FIND OUT

Nobody makes rules just to spoil your fun. Almost every rule in a game is there because somebody once got hurt.

A helmet must sit level on your head, two finger widths above your eyebrows, with the straps making a V under your ears. If it is tipped back it protects nothing at all.

And you warm up first. Gentle running, then stretching, then the game. Cold muscles tear. Warm muscles bend.

A helmet sits level, two fingers above your eyebrows. Not tipped back.

YOUR TURN

1 Tick the ones that keep you safe.

- ☐ a helmet that fits ☐ running on wet tiles ☐ warming up first
☐ playing until you feel dizzy ☐ drinking water ☐ a helmet tipped back

2 Think of a rule in a game you play. Write what it stops happening.

The rule is

BIG THINKING

Rufus wants to take the goalposts away so nobody can crash into them. Bram says then it is not football any more. Is a safer game always a better game?

FIELD NOTES

Draw a place where you play. Mark one spot with an X where somebody could get hurt.

Teamwork in sports

Six players. Every one of them gets a turn to serve, because the rules say so.

DO YOU REMEMBER?

Have you ever been in a team? What was your job in it?

BOOTS ON!

Stand in a line of five. Everybody clap at the same moment. Not nearly the same moment. The same one.

LET US FIND OUT

A team is not just several people. It is several people who need each other.

In volleyball there are six players, and every time the team wins the serve back, everybody moves round one place. That means nobody can hog the serving, ever. The rule builds turn taking right into the game.

In tug of war, one very strong person cannot win on their own. The team has to pull at exactly the same moment. It was even an Olympic sport once.

YOUR TURN

1 Circle the ones a team needs.

listening

shouting louder

taking turns

one boss

trusting

2 Write about a time your team did better than you could alone.

Once, my team

DID YOU KNOW?

Tug of war was in the real Olympic Games from 1900 until 1920, and then they stopped it.

FROM ANOTHER CHAIR

- *Rufus says:* The strongest team wins. That is what strong means.
- *Nella says:* The team that pulls together wins. I have seen five small people beat three big ones.
- *Then:* Try it in the yard with a rope and your teacher watching. Then write down who turned out to be right.

FIELD NOTES

Draw your team. Put a small arrow on the person who helps everybody else the most.

UNIT 1 - TOPIC 1.7

THE PLAYING FIELDS

Sports in our community

A club is not a building. It is the people who look after the building.

DO YOU REMEMBER?

Where is the nearest place to your home where people play sport?

BOOTS ON!

Name every place near your school where somebody could play something. Count them on your fingers.

LET US FIND OUT

A club is a group of people who share a place to play and take turns looking after it. Somebody cuts the grass. Somebody unlocks the door. Usually nobody is paid.

Sport is so important to people that there is a whole museum about the Olympic Games, in Lausanne in Switzerland, full of torches and medals and old running shoes.

YOUR TURN

- 1 Draw a map of one place near you where people play.

MARK WITH AN X WHERE YOU WOULD STAND TO WATCH.

- 2 Who looks after that place? Write who you think it is.

I think it is looked after by

LOOK CLOSER

Look inside the Olympic Museum in Switzerland, without leaving your chair.

https://en.wikipedia.org/wiki/Olympic_Museum

FIELD NOTES

Write one thing your class could do to make a playing place near you better.

Different people, different sports

Every player is wearing a blindfold. The ball has bells inside it. This is goalball, and it is played by listening.

DO YOU REMEMBER?

Shut your eyes and stay still. What can you hear that you did not notice before?

BOOTS ON!

Sit very still with your eyes closed for twenty seconds while your teacher moves quietly around the room. Point at where they are.

LET US FIND OUT

In goalball, every single player wears a blindfold, and the ball has bells inside it. So the whole game is played by listening. The crowd has to stay

completely silent while the ball is moving.

It was invented in 1946 to help soldiers who had lost their sight in the war. Because everybody is blindfolded, a player who can see and a player who cannot are exactly equal.

Boccia is played sitting down, rolling leather balls towards one small white ball. Some players use a ramp to send the ball exactly where they want it.

YOUR TURN

- 1 Why does the goalball crowd have to be silent? Write your answer.

The crowd is silent because

- 2 Design a ball for a game played by listening.

DRAW YOUR BALL. SHOW WHERE THE BELLS GO.

DID YOU KNOW?

A goalball weighs 1.25 kilograms, has eight holes in it, and the bells inside are the only way anybody knows where it is.

FROM ANOTHER CHAIR

- *Rufus says:* Goalball is a game for people who cannot see.

- *Nella says:* Goalball is a game where seeing is no use to anybody, so it is a game for everybody equally.
- *Then:* Which of those two sentences would you rather have said about a game you play? Say why.

LOOK CLOSER

Watch a real goalball match. Listen for the bells in the ball, and notice how quiet the crowd goes.

<https://www.paralympic.org/goalball>

FIELD NOTES

Write one word for how you think a goalball player feels when they score.

Recreation and free time

Free time is not empty time.

A day has twenty four hours in it. Where do yours actually go?

DO YOU REMEMBER?

What did you do yesterday that nobody told you to do?

BOOTS ON!

Say one thing you do in your free time that costs nothing at all.

LET US FIND OUT

Recreation is a long word for the time that is yours. Not sleeping, not school, not jobs. Yours.

And here is something surprising. Playing is not just allowed. It is written down as one of your rights, in an agreement that almost every country in the world has signed. It is article 31, and it says every child has the right to rest, to relax and to play.

YOUR TURN

- 1 Colour your own day clock above. Use a different colour for sleeping, school, playing and eating.
- 2 Which slice would you like to make bigger?

I would make bigger the slice for

DID YOU KNOW?

Playing is your right, and the adults in nearly every country in the world have signed a piece of paper promising it.

FIELD NOTES

Draw the very best thing you did in your free time last week.

Weather and sports

Same field, same friends, different coat.

DO YOU REMEMBER?

What do you put on before you go outside when it is raining?

BOOTS ON!

Look out of the window. Say what you could play right now, and what you could not.

LET US FIND OUT

The weather does not stop you playing. It changes what you play, and what you wear while you play it.

People who work out what the weather will do next are called forecasters. Checking a forecast before you go out means you take the right coat, and choose the right game.

In very hot weather you need shade and water. In wind, a light ball is useless. In ice, everything is slower and you plan for that.

YOUR TURN

1 Match the weather to a good game for it.

hot and sunny

pouring rain

very windy

cold and icy

running to keep warm

flying a kite

board games indoors

paddling and shade

2 What is the best weather for your favourite game?

My game is best when the weather is

LOOK CLOSER

Find out what the weather will do near you before you plan tomorrow's game.

<https://www.metoffice.gov.uk/weather/learn-about/weather>

FIELD NOTES

Draw two children playing the same game, one in summer and one in winter. Show what is different.

Healthy habits through sports

Move, drink, eat, sleep. Four habits, one body.

DO YOU REMEMBER?

How do you feel the morning after a night when you did not sleep enough?

BOOTS ON!

Name the four healthy habits from the picture. Then say which one you are best at.

LET US FIND OUT

A habit is something you do so often that you stop having to decide about it.

When you play hard you sweat, and sweating means your body is using up water. So you drink. Children lose water faster than adults do, which is why the water bottle matters.

And then you sleep. Children of seven need about ten or eleven hours every night, because that is when the body actually does the growing and the mending.

MY HABIT WEEK

ONE TICK A DAY, AND DO NOT RUB ANY OUT

	M	T	W	T	F	S	S
moved for an hour	☐	☐	☐	☐	☐	☐	☐
drank water	☐	☐	☐	☐	☐	☐	☐
ate something green	☐	☐	☐	☐	☐	☐	☐
slept ten hours	☐	☐	☐	☐	☐	☐	☐

YOUR TURN

1 Tick every habit you did yesterday.

☐ moved for an hour
 ☐ drank water
 ☐ ate something green
☐ slept ten hours

2 Choose one habit to work on this week. Write it, and write when you will do it.

This week I will

ONE STEP FURTHER

Keep a habit chart for one whole week. Put a tick in a box every day you manage your habit. Do not rub any out. The gaps are useful too.

LOOK CLOSER

Your teacher can read the official advice on children, moving about and sleep.

<https://www.nhs.uk/live-well/exercise/physical-activity-guidelines-children-and-young-people/>

FIELD NOTES

Write the one habit you are proudest of, and why it is hard.

Our class expedition: The Field Club Games

Your class is going to invent one brand new game, teach it to another class, and then watch what happens to your own rules when other people get hold of them.

- 1 Choose your ingredients** Pick one thing to move (a ball, a beanbag, a hoop) and one thing to reach (a line, a hoop, a wall). Nothing else.
- 2 Write three rules only** Three. Not four. Write them big enough for a stranger to read from across the hall, and make one of them a safety rule.

3 Teach it to somebody else Teach your game to another class without demonstrating it. Words only. This is much harder than it sounds, and that is the point.

4 Watch, then change one rule Play it. Find the one rule that did not work. Change it, and write down why you changed it.

Our plan (field notes). Write your three rules here. Then draw a line through the one you had to change, and write the new one underneath.

How did it go?

WHAT I DID	EASY	GETTING THERE	I NEED HELP
I counted up a class survey and read it	☐	☐	☐
I sorted games into indoors, outdoors and both	☐	☐	☐
I learned a real game from another country	☐	☐	☐
I explained why we warm up	☐	☐	☐
I listened to somebody who disagreed with me	☐	☐	☐
I wrote my own field notes	☐	☐	☐

UNIT 1 • THE PLAYING FIELDS

NOW I CAN

Now I can

☐ count up a survey and say what it shows

- ☐ sort games into indoors and outdoors, and spot the ones that are both
- ☐ name a traditional game from Ghana, from India and from Portugal
- ☐ say how many minutes a day a child should move about
- ☐ check that a helmet fits properly
- ☐ explain how goalball is played, and why the crowd is silent
- ☐ say why playing is a right and not just a treat

UNIT 1 • THE PLAYING FIELDS

THE PLAYING FIELDS · HISTORY

Time capsule

History

Children in ancient Egypt ran and jumped and wrestled. Children in ancient China kicked a ball called cuju, which was a little bit like football. In Ghana children played ampe, clapping and jumping. In India they played kabaddi, and in Portugal the old game of the péla was chased down the street.

Nobody bought these games in a shop. Children taught them to each other, and they travelled from land to land the way a ball travels from player to player.

THE PLAYING FIELDS · GEOGRAPHY

Global trotters

Geography

Sport is a map you can play. Football needs a field, ice hockey needs cold winters, and surfing needs a sea. Every game tells you something about the place it comes from, and every place plays something of its own.

UNIT 2 • THE LONG ROAD HOME • TERM 1

Rich and poor

The Long Road Home

Where the Field Club asks what a person really needs

Who decides what counts as enough?

NEEDS

HOMES

WORK

SHARING

Getting started

Field Club is here!

Bram has folded the map into his pocket, because today the Field Club is walking, not measuring. Rufus wants to know who owns the field they are crossing. Nella has noticed that the house at the end of the track has a light on and one at the top of the hill does not. Pip is carrying a jug of water very carefully. Tam is asleep in the knapsack.

On this expedition you will

- Work out what a person truly cannot live without
- Sort things into needs and wants, and argue about the tricky ones
- Visit four real homes in four countries and see why each one is built that way
- Find out what jobs are for
- Discover what a food bank does, and who runs the fire engine in Portugal
- Learn what saving actually means, with real euro coins

The big question, note printed beside it

Rufus says enough is when you have what you need. Nella says her grandmother had less than anybody and always said she had plenty. Bram says somebody, somewhere, decided what enough means, and we should find out who.

What do we need to live?

Water, food, a safe place to sleep, somebody who cares about you. Start there.

DO YOU REMEMBER?

In Year 1 you learned about your body. What does your body ask for every single day?

BOOTS ON!

Name five things you have used already today that came out of a tap.

LET US FIND OUT

There are only a few things a person truly cannot live without: clean water, food, warmth, a safe place to sleep, and somebody who cares about them.

Most people in the world can turn on a tap at home. But two thousand two hundred million people still cannot, and they have to fetch their water and carry it.

So people invent things. A man called Grant Gibbs designed a barrel that rolls along the ground on its side, so one person can move ninety litres of water at once instead of carrying a heavy bucket on their head.

YOUR TURN

1 Circle the four things nobody can live without.

clean water

a television

food

sweets

somewhere safe to sleep

a scooter

somebody who cares

2 Draw the rolling water barrel.

SHOW HOW SOMEBODY PUSHES IT, AND WHERE THE WATER GOES IN.

DID YOU KNOW?

Clean water and good food are not luck. They are written down as things every child in the world has a right to.

LOOK CLOSER

Find out how many people in the world can turn on a tap, and how many still cannot. Your teacher can read it with you.

<https://www.who.int/news-room/fact-sheets/detail/drinking-water>

FIELD NOTES

Write down every tap in your home. Then write how far you would walk if there were none.

Needs and wants

Write the easy ones first. Argue about the rest.

A need is something you cannot live without. A want is something lovely to have. Almost every argument about money is really about which is which.

DO YOU REMEMBER?

What is the last thing you really wanted? Did you get it?

BOOTS ON!

Say one need and one want, out loud, in five seconds.

LET US FIND OUT

You need water. You want lemonade. Both are nice. Only one of them keeps you alive.

But watch out, because it is not always simple. Is a coat a need or a want? In January in Portugal, a warm coat is a need. A second coat in a different colour is a want. The same object can be both, depending on how many you already have.

NEED

WANT

YOUR TURN

1 Write each of these into the right tray above.

above

a bicycle

clean air

a warm coat

a bed

a games console

sweets

food

clean water

- 2 Which one caused an argument in your class? Write it and write both sides.

We could not agree about

FROM ANOTHER CHAIR

- *Rufus says:* A bicycle is a want. You can walk.
- *Nella says:* If school is five kilometres away and there is no bus, that bicycle is how you get an education. Then it is a need.
- *Then:* So can the same thing be a need for one person and a want for another? Say what you think, and give your reason.

FIELD NOTES

Write one thing you used to think was a need and now think is a want.

Different homes around the world

Four homes, four countries, and every single one built exactly right for where it stands.

DO YOU REMEMBER?

What is your home made of? Look at the walls and guess.

BOOTS ON!

Point at the picture. Which home would be warmest in snow? Which would be coolest in heat?

LET US FIND OUT

In Mongolia, families live in a round tent called a ger. It has a wooden frame covered in thick felt and a stove in the middle, and the door always faces south to catch the most daylight. It can be taken down and moved.

In Alberobello in Italy, there are houses with pointed stone roofs built with no cement at all, just stones balanced perfectly. Some are over six hundred years old.

In Amsterdam, some families live on houseboats on the canals, with post and water and electricity, just like any other home.

And on Madeira, in Portugal, at Santana, there are little houses with steep straw roofs painted red, white and blue.

YOUR TURN

- 1 Match each home to the country it comes from.

a ger

Portugal

a trullo

the Netherlands

a houseboat

Italy

a palheiro

Mongolia

- 2 Why does the ger door face south? Write your answer.

The door faces south so that

DID YOU KNOW?

The stone houses of Alberobello are built without a drop of cement. Every stone is simply balanced on the ones below it.

LOOK CLOSER

See the round stone houses of Alberobello, and read why they are protected.
<https://whc.unesco.org/en/list/787/>

FIELD NOTES

Draw your own home from the outside. Label one thing that suits the weather where you live.

Jobs and helping families

Every job on this page finishes with somebody else getting what they need.

DO YOU REMEMBER?

What does an adult in your family do all day?

BOOTS ON!

Name three jobs that helped you get to school this morning.

LET US FIND OUT

A job is work somebody does so that other people get what they need. The farmer grows it. The driver moves it. The shopkeeper sells it. The nurse mends you. The teacher teaches you.

Adults go to work, and children go to school. That is not just a habit, it is a rule that nearly every country has agreed to, so that no child has to do work that would harm them or stop them learning.

YOUR TURN

- 1 Draw a line from each job to the need it meets.

farmer

nurse

builder

teacher

being well

knowing things

food

shelter

- 2 Write a job that helps you, and say how.

A job that helps me is

ONE STEP FURTHER

Children help at home too: laying a table, feeding an animal, minding a smaller child. Make a list of every way you help. It will be longer than you expect.

FIELD NOTES

Write the job you would like to do, and the need it would meet.

UNIT 2 - TOPIC 2.5

THE LONG ROAD HOME

Communities helping together

DO YOU REMEMBER?

Who came to help the last time something went wrong near you?

BOOTS ON!

Say the word volunteer. Now say what it means in your own words.

LET US FIND OUT

A food bank collects food that people give and passes it on to families who need it that week. In Portugal the Banco Alimentar runs collections all over the country with thousands of volunteers.

And here is something remarkable about Portugal. Most firefighters here are volunteers. They have other jobs, and they leave those jobs and come when the siren goes. Out of about four hundred and eighty fire stations, nearly all of them are volunteer stations.

Nobody here is paid. They came because the siren went.

YOUR TURN

1 Circle the people who are usually volunteers.

bombeiros

a bus driver

a food bank helper

a shopkeeper

somebody minding a neighbour

2 Why would somebody do a hard job for no money at all?

I think they do it because

BIG THINKING

If the bombeiros are volunteers and they save your house, what do you owe them? Nothing, because they chose to come? Or something, because they came?

LOOK CLOSER

See what the Portuguese food bank actually does, with your teacher.

<https://www.bancoalimentar.pt/>

FIELD NOTES

Write the name of one person or group near you who helps everybody.

Saving and spending wisely

One side of every euro coin is the same everywhere. The other side is different in every country.

DO YOU REMEMBER?

Have you ever saved up for something? How long did it take?

BOOTS ON!

If you had one euro today, would you spend it or keep it? Say why in one sentence.

LET US FIND OUT

Saving means not spending today, so that you can buy something bigger later. That is all it is. It is simple, and it is very hard.

Portugal uses the euro. Every euro coin has one side that is the same all over Europe, and one side that belongs to its own country. Portuguese coins have the old royal seals and castles on them. So a coin from Portugal spends perfectly well in Italy, and you can see where it came from.

ONE EURO A WEEK

YOUR TURN

- 1 You want something that costs eight euros. You get one euro a week. Colour one coin above for each week until you have enough.
- 2 Write how many weeks it took.

It took me

FROM ANOTHER CHAIR

- *Rufus says:* Spend it now. A euro today is a real euro. Next week is not real yet.

- *Nella says:* Keep it. In eight weeks you get the thing you actually wanted, instead of eight small things you have already forgotten.
- *Then:* Who is right? Try both for a month and write down which one made you happier.

LOOK CLOSER

Look closely at every euro coin from every country, and find the Portuguese one.

<https://www.ecb.europa.eu/euro/coins/html/index.en.html>

FIELD NOTES

Draw something you are saving for. Write how much it costs.

Our class expedition: The Field Club shop

Your class is going to run a shop for one afternoon, with real prices and pretend coins, and find out how quickly a want turns into a need when you have only eight euros in your hand.

- 1 Make the stock** Every child makes or draws three things to sell, and writes a price on each in euros. Nothing may cost more than five euros.
- 2 Sort the shelves** Put everything on two tables: NEEDS on one, WANTS on the other. You will argue about at least four items. Write those four down, because the argument is the lesson.

3 Everybody gets eight euros Exactly eight, in paper coins. Now shop. You cannot have everything, and that is the entire point of the afternoon.

4 Count up, then talk Which table sold more? Did anybody save their coins and buy nothing? Ask that person why, and listen properly to the answer.

Our plan (field notes). Write the four things your class could not agree about. Leave them unagreed.

How did it go?

WHAT I DID	EASY	GETTING THERE	I NEED HELP
I named the things nobody can live without	☐	☐	☐
I sorted needs from wants and argued my case	☐	☐	☐
I described a home from another country	☐	☐	☐
I explained what a job is for	☐	☐	☐
I said what a volunteer is	☐	☐	☐
I worked out how long saving would take	☐	☐	☐

Now I can

☐ name four things every person needs to live

- ☐ tell the difference between a need and a want, and explain a tricky one
- ☐ describe a ger, a trullo, a houseboat and a palheiro, and say where each one is
- ☐ explain what jobs are for
- ☐ say what a food bank does
- ☐ say what is unusual about Portugal's firefighters
- ☐ explain what saving means and why it is hard

New words

need

something you cannot live without

want

something lovely to have

ger

a round Mongolian home made of felt

volunteer

somebody who helps and is not paid

food bank

where given food is passed on to families

saving

keeping money now to buy more later

euro

the money used in Portugal

community

the people who share a place

Time capsule

History

Long ago, people made homes from whatever the land gave them. In Mongolia the ger uses wooden poles and thick felt from sheep, because the family moves and the home must move too. In Italy, trulli were built of dry stone with no cement at all, one roof balanced on the next. In the Netherlands some families live on houseboats on the canals, and in Madeira the little palheiro houses

Every one of these homes is exactly right for where it stands. That is the test of a good home: not what it is made of, but how well it fits the weather, the ground and the lives of the people inside it.

Global trotters

Geography

Now meet the travellers. Marco Polo left Venice aged seventeen and rode the silk roads all the way to China, a journey of twenty-four years. Ibn Battuta walked out of Morocco in 1325 and did not come home for twenty-nine years: he crossed Africa, India and the Maldives, and wrote it all down.

A girl in Mongolia sleeps in a ger while a girl in Madeira sleeps under a straw roof. Both look out of their windows at a world that is exactly the same size, and both can walk to the other one if they keep walking long enough.

UNIT 3 • THE GLOWING WINDOW • TERM 2

Digital world

The Glowing Window

Where the Field Club looks into a screen and asks who is looking back

Should a screen ever be allowed to decide for you?

SCREENS

SAFETY

KINDNESS

INVENTING

Getting started

Field Club is here!

It is dark outside the hut and there is one screen on the table, and all five of them are leaning into its glow. Bram wants to know who put the picture there. Rufus wants to press everything. Nella has asked whether the person who made this knows we are watching. Pip has found the wire and is following it. Tam is sitting on the keyboard.

On this expedition you will

- Work out what the digital world actually is
- Hunt for the computers hidden inside ordinary things in your house
- See how a phone helps somebody in Kenya do something a bank used to do
- Learn the three online safety rules by heart
- Find out why words on a screen can hurt as much as words out loud
- Design a machine that does not exist yet

The big question, note printed beside it

Rufus says a screen that chooses for you saves you the bother. Nella says then it is not your choice any more. Bram wants to know who wrote the instructions the screen is following.

What is the digital world?

A screen, a wire, a mast, and a person at each end. That is the whole thing.

DO YOU REMEMBER?

How many screens are switched on in your home right now?

BOOTS ON!

Count the screens you can see from where you are sitting. Then count the people.

LET US FIND OUT

The digital world is everything that happens inside screens, plus all the wires and signals that join them up, plus the people at both ends. That last part is the part everybody forgets.

And that little square you have been scanning? It was invented in 1994 by Masahiro Hara in Japan, to label car parts faster. The letters Q and R stand for quick response. It reads in two directions instead of one, which is why it can hold so much more than a shop barcode.

YOUR TURN

- 1 What do the letters Q and R stand for? Write them.

Q and R stand for

2 Draw the little square.

GIVE IT FOUR CORNERS LIKE THE REAL ONES, AND MAKE YOUR OWN PATTERN INSIDE.

DID YOU KNOW?

Masahiro Hara got the idea for the QR code while playing the board game Go, looking at the pattern of black and white stones.

LOOK CLOSER

Meet the man who invented the little square, and find out what he was trying to solve.

https://en.wikipedia.org/wiki/QR_code

FIELD NOTES

Write one thing a screen lets you do that paper never could.

Digital devices around us

Six things. Every one of them has a computer inside it. Only one looks like one.

DO YOU REMEMBER?

What is the difference between a television and a tablet?

BOOTS ON!

Look around the room. Point at three things you think have a computer hidden in them.

LET US FIND OUT

Here is a surprise. Most of the computers you meet in a day are not shaped like computers at all.

A washing machine has one inside it, deciding how long to spin. A traffic light has one, counting. A microwave, a car, a lift, a digital watch, the till at the

shop. Once you start counting them you will find far more than you expected.

YOUR TURN

- 1 Tick every one that has a computer hidden inside.
- ☐ a washing machine ☐ a wooden spoon ☐ a traffic light ☐ a bicycle bell
- ☐ a microwave ☐ a paper book
- 2 Count the hidden computers where you live. Write your total.

In my home I counted

ONE STEP FURTHER

Ask an adult at home what the oldest machine in your home is, and whether it has a computer in it. Then ask what it had instead.

FIELD NOTES

Draw the most surprising hidden computer you found at home.

Technology around the world

Three inventions, three countries, and each one solved a problem right where it was.

DO YOU REMEMBER?

What do you use a phone for?

BOOTS ON!

Say one thing you could not do at all if there were no electricity today.

LET US FIND OUT

In Kenya, people send money to each other using nothing but a simple mobile phone, through a service called M-Pesa. It started in 2007 and now more than forty million people in Kenya use it every month. It works by text message, so you do not need a smart phone and you do not need a bank.

A small solar lamp charges in the sun all day and lets a child do their homework after dark, with no wires and no fuel to buy.

And in Switzerland in 1989, Tim Berners-Lee invented the World Wide Web at a laboratory called CERN. The very first web page he made is still online today, and you can go and look at it.

YOUR TURN

1 Match each invention to the problem it solved.

M-Pesa

sharing what scientists knew

a solar lamp

reading after dark

the World Wide Web

sending money with no bank

2 Write one problem where you live that a new invention could solve.

Near me, it would help if somebody invented

LOOK CLOSER

Look at the very first web page ever made. It is still there, exactly as it was.
<http://info.cern.ch/>

FIELD NOTES

Write the invention from this page you think is cleverest, and why.

Learning with technology

A screen is at its best when it shows you something the room cannot.

DO YOU REMEMBER?

What is the best thing you have ever learned from a screen?

BOOTS ON!

Name one thing a book does better than a screen. Then name one thing a screen does better than a book.

LET US FIND OUT

A screen can take you inside a volcano, show you a blue whale next to a bus, and let you hear a language spoken on the other side of the world. Paper cannot do any of that.

But paper is better at some things. You can write on it. You can spread six pages out at once. It does not run out of battery. It does not interrupt you.

That is exactly why the little squares in this book only ever take you to things the paper cannot do. Not one of them replaces something the page already does well.

SCREEN IS BETTER FOR

PAPER IS BETTER FOR

YOUR TURN

1 Write each one into the right column above.

seeing something move

writing your answer

taking it outside

hearing a sound

zooming right in

spreading it all out

2 Which do you prefer for learning? There is no right answer.

I learn best from

FROM ANOTHER CHAIR

- Rufus says: A screen is better. It can show you anything in the world.
- Nella says: A book is better. You can write in it, and it is still there when the electricity goes off.

- *Then:* Both of them are right about something. Write down what each of them is right about.

FIELD NOTES

Write one thing you would like to see on a screen that you can never see in real life.

Staying safe online

Three rules, one traffic light.

Three rules. Learn them so well that you never have to stop and think.

DO YOU REMEMBER?

Who are the adults you would tell if something worried you? Name two.

BOOTS ON!

Say the three rules out loud without looking. Then check.

LET US FIND OUT

Rule one. Never tell anybody online your name, your school or where you live. Not even if they seem friendly. Especially not if they seem friendly.

Rule two. If something on a screen makes you feel funny inside, tell an adult straight away. You will never, ever be in trouble for telling.

Rule three. A password is like a toothbrush. You do not share it, not even with your best friend. That is not being unkind. That is how passwords work.

1 MY RULE	2 MY RULE	3 MY RULE
---	---	---

YOUR TURN

- 1 Write the three rules in your own words, one on each card above.
- 2 Somebody you have never met asks which school you go to. What do you do?

tell them

do not answer, and tell an adult

ask them first

LOOK CLOSER

Hear the story of Smartie the Penguin, who learns exactly these rules the hard way.

<https://www.childnet.com/resources/smartie-the-penguin/>

FIELD NOTES

Write the name of the adult you would tell. Then go and tell them you wrote it.

Being kind online

There is always somebody at the other end. Always.

DO YOU REMEMBER?

How did it feel the last time somebody said something unkind to you?

BOOTS ON!

Think of one kind thing you could type to somebody today. Do not say it out loud. Just decide.

LET US FIND OUT

Here is the thing that is easy to forget when you are typing. There is a real person at the other end, holding a real screen, with a real face.

Words on a screen can hurt just as much as words said out loud. Sometimes more, because they do not disappear. Somebody can read them again tomorrow.

The test is simple. Before you send it, ask yourself: would I say this to their face, with their whole family standing next to them? If not, do not send it.

For the teacher: this topic is what the curriculum calls digital citizenship.

YOUR TURN

1 Which of these would you be happy to receive? Tick them.

- ☐ well done on your picture ☐ that was rubbish ☐ do you want to play
☐ nobody likes you

2 Somebody is being unkind to your friend online. Write what you would do first.

First I would

BIG THINKING

If you say something unkind out loud, it is gone in a second. If you type it, it can still be there next year. Does that make typing it worse?

LOOK CLOSER

Your teacher can find out exactly how to help if somebody is being unkind online.

<https://www.internetmatters.org/issues/cyberbullying/resources/>

FIELD NOTES

Write one rule your class could agree on for being kind on a screen.

Screen time control

DO YOU REMEMBER?

What do you do straight after you put a screen down?

BOOTS ON!

Guess how long you were on a screen yesterday. Now ask an adult what they think. Compare.

LET US FIND OUT

People will tell you a number of hours. We are not going to, because the world's doctors have not agreed on one for children of your age, and we are not going to invent one.

What they do say is this, and it is more useful anyway: the best thing to do with screen time is to swap some of it for moving about. Not delete it. Swap it.

Remember that sixty minutes of moving from Expedition 1? That is where the swap goes.

Not a rule about hours. A rule about swapping.

YOUR TURN

- 1 Colour yesterday onto the clock above. Use one colour for the screen slice and another for the moving slice.
- 2 What could you swap this week? Write the swap.

I could swap

DID YOU KNOW?

Nobody has ever invented a screen that makes your legs stronger. That is still the only job legs have.

FIELD NOTES

Write one thing you would rather do than look at a screen, if somebody reminded you.

Designing the technology of the future

Every machine that exists was once just somebody's drawing.

DO YOU REMEMBER?

What is the cleverest machine you have ever seen?

BOOTS ON!

Name one thing that annoys you every single day. That is your problem. Keep it.

LET US FIND OUT

Here is a thought worth keeping. Every single machine in the world was once nothing but somebody's drawing on a piece of paper.

And every one of them started with a problem, not with an idea. Masahiro Hara had a problem: car parts took too long to scan. Grant Gibbs had a

problem: water is heavy. Tim Berners-Lee had a problem: scientists could not find each other's work.

So an inventor does not begin by being clever. An inventor begins by noticing something annoying.

YOUR TURN

- 1 Write the problem your invention will solve.

My invention solves this problem

- 2 Draw your invention.

LABEL TWO PARTS, AND SAY WHAT EACH PART DOES.

- 3 Who does it help most?

It helps

ONE STEP FURTHER

Show your drawing to somebody who is not in your class. Ask them one question: what would go wrong with this? Then write their answer down. That is what real inventors do next.

FIELD NOTES

Write down one thing that would go wrong with your invention. Do not fix it yet.

Our class expedition: The Field Club invention fair

Your class is going to hold an invention fair, and the rule is unusual: you are marked on the problem, not on the machine.

- 1 Find a real problem** Spend one whole day carrying your notebook and writing down every annoying thing you notice. Do not think about solutions yet. Collect at least five problems.
- 2 Pick the one that matters most** Choose the problem that affects the most people, not the one with the best idea attached. Write down who it affects.
- 3 Draw the machine** Draw it big, on one sheet. Label every part. Do not worry about whether it could really be built.
- 4 Hold the fair, and ask the hard question** Set the drawings out. Every visitor must ask each inventor the same question: what would go

wrong with this? Inventors write the answers on the back.

Our plan (field notes). Write the five problems you collected. Circle the one you chose.

UNIT 3 • THE GLOWING WINDOW

HOW DID IT GO?

How did it go?

WHAT I DID	EASY	GETTING THERE	I NEED HELP
I explained what the digital world is	☐	☐	☐
I found hidden computers in ordinary things	☐	☐	☐
I described an invention from another country	☐	☐	☐
I said the three online safety rules from memory	☐	☐	☐
I explained why typed words can hurt	☐	☐	☐
I designed something that does not exist yet	☐	☐	☐

UNIT 3 • THE GLOWING WINDOW

NOW I CAN

Now I can

- ☐ say what the digital world is, including the people in it
- ☐ say who invented the QR code, when, and what Q and R stand for
- ☐ find the hidden computers in ordinary objects
- ☐ explain how somebody in Kenya sends money with a simple phone
- ☐ say the three online safety rules without looking

—

- ☐ explain why unkind words on a screen can hurt more than spoken ones
- ☐ start an invention with a problem instead of an idea

New words

digital

anything that works through screens and signals

password

a secret word that keeps things yours

invention

something that did not exist until somebody made it

screen time

the time you spend looking at a screen

device

a machine with a computer inside it

online

joined up to other computers far away

problem

the annoying thing an invention fixes

kind

treating somebody as a real person

UNIT 4 • THE TALKING WOOD • TERM 2

Improving communication

The Talking Wood

Where the Field Club learns that talking and being understood are two different things

Can you understand somebody whose language you do not speak?

WORDS

LISTENING

FEELINGS

SIGNALS

Getting started

Field Club is here!

They are in a clearing in a birch wood and all five are talking at once, which is the problem. Rufus has both paws up explaining. Nella has one ear turned right forward and has not said a word. Tam is cupping his paws and shouting to somebody a long way off. Pip has raised one small paw and is waiting. Bram is nodding, which could mean anything.

On this expedition you will

- Work out how many ways there are to send a message
- Discover that listening and waiting for your turn are not the same thing
- Say hello with your hands, and spell your own name
- Find better words for big feelings
- Meet a fifteen year old who invented reading with your fingertips
- Trace a message from your mouth to your friend's ear, across the world

The big question, note printed beside it

Rufus says of course not, you would not understand a word. Nella says she once spent a whole afternoon playing with a girl in Spain and neither of them spoke the other's language, and it was one of her best afternoons. Bram wants to know what they actually did.

What is communication?

Every one of these is a message. Only two of them use words.

DO YOU REMEMBER?

How do you tell somebody you are hungry without saying it?

BOOTS ON!

Send a message to somebody across the room without any words or sounds. Did it arrive?

LET US FIND OUT

Communication is getting something out of your head and into somebody else's. That is all it is, and it is the hardest thing people do.

You can do it with words, with your face, with your hands, with a picture, with a drum, with a light, with a flag, with a smell of dinner cooking.

And there is a great deal of it going on. There are more than seven thousand languages being spoken in the world right now.

YOUR TURN

- 1 Count the ways of sending a message in the picture. Write your total.

I counted

- 2 Write the way you use most often.

I mostly communicate by

DID YOU KNOW?

There are more than seven thousand languages alive in the world today, and every single year a few of them fall silent for ever.

FIELD NOTES

Write one thing you find hard to put into words.

Speaking and listening

One of these children is listening. The other is waiting for a gap.

DO YOU REMEMBER?

Has anybody ever said something to you and you did not hear a word of it?

BOOTS ON!

Turn to the person next to you. They talk for thirty seconds. Then you say their idea back. No adding your own.

LET US FIND OUT

Here is the difference, and it matters more than almost anything else in this book. Listening is not the same as waiting for your turn to talk.

You know you were listening if you can say the other person's idea back to them, in your own words, and they say yes, that is what I meant.

That is Nella's job in the Field Club, and it is the hardest job of the five.

YOUR TURN

- 1 Play say it back. Your partner tells you their favourite meal. Now write it here, in their words, not yours.

My partner said

- 2 Did you get it right? Ask them.

yes, exactly

nearly

not really

ONE STEP FURTHER

Try this at home. When somebody tells you something, say it back before you reply. Notice their face when you do.

FROM ANOTHER CHAIR

- *Rufus says:* If I heard the words, I listened. What else is there?
- *Nella says:* You heard them. You were already thinking about what you wanted to say next. That is different.
- *Then:* Try it. Ask a friend to tell you something, then say it back. Write down whether you managed it.

FIELD NOTES

Write one thing somebody told you today that you actually remember.

Verbal and non-verbal communication

Same message, two routes.

Half of what you say every day, you say without opening your mouth.

DO YOU REMEMBER?

What does it mean when somebody folds their arms and looks away?

BOOTS ON!

Show these with no words at all: I am pleased. I am not sure. Stop.

LET US FIND OUT

With words is called verbal. Without words is called non-verbal. You do both all day long.

A wave, a smile, a nod, folded arms, a shrug, turning your back. Every one of them is a message, and most of them arrive faster than words do.

And here is something important. Portuguese Sign Language is a full language, with its own grammar, used by deaf people all over Portugal. It is

not Portuguese done with hands. Portugal thought it mattered enough to write it into the constitution in 1997.

PROUD

NERVOUS

LEFT OUT

YOUR TURN

- 1 Draw three faces in the circles above: proud, nervous, left out. No words allowed.
- 2 Learn to spell your own name with your hands. Then write how many letters you had to learn.

My name has

LOOK CLOSER

Learn to spell your own name with your hands, using a real fingerspelling chart.

<https://www.british-sign.co.uk/fingerspelling-alphabet-charts/>

FIELD NOTES

Write one thing your face does that gives you away.

Feelings and communication

Cross is not the only word. There are about forty better ones.

DO YOU REMEMBER?

What word do you use when you do not know which word to use?

BOOTS ON!

Say a feelings word that is not happy, sad or cross. Go round the whole class without repeating one.

LET US FIND OUT

When a feeling is very big, it is hard to find a word for it, and so people reach for the nearest one. Usually that is cross, or sad, or fine.

But putting a big feeling into exactly the right word makes it easier to carry. That is not a saying. It genuinely works.

Try these instead of cross: **disappointed, left out, embarrassed, worried, jealous, frustrated**. Each one is a different feeling, and knowing which is which is a real skill.

YOUR TURN

1 Match each feeling to when you might have it.

disappointed

everybody was picked but me

left out

I have tried it nine times

frustrated

it is my turn next

nervous

the trip was cancelled

2 Write about a time you felt something and could not name it.

Once I felt

LOOK CLOSER

Watch somebody putting a big feeling into words, and see how much it helps.

<https://www.bbc.co.uk/bitesize/articles/zwdng2p>

FIELD NOTES

Write the feeling you have most often. Then write a better word for it.

Communication around the world

DO YOU REMEMBER?

How would you send a message to somebody a whole valley away?

BOOTS ON!

Tap out three short, three long, three short on the table. That is SOS.

LET US FIND OUT

Louis Braille was born in France in 1809 and lost his sight as a very small child. He was about fifteen years old when he worked out a way of reading with your fingertips, using patterns of raised dots. It is used all over the world today and it has hardly changed.

In West Africa there is a drum called a dundun, shaped like an hourglass, with cords down its sides. Squeeze the cords and the note changes. A skilled player can make it copy the rise and fall of a person speaking, so the drum really does talk.

And before telephones, people sent messages as long and short beeps called Morse code. Three short, three long, three short means help me.

A drum, a set of raised dots, and a pattern of beeps. All three are reading.

THE FIRST TEN LETTERS, IN REAL BRAILLE

a.	b.	c.	d.	e.	f.	g.	h.	i.	j.

NOW YOUR OWN INITIALS

YOUR TURN

- 1
- Write your own initials in dots on the empty cells above, three dots high and two wide, like braille.

2 How old was Louis Braille when he worked out his alphabet?

He was about

DID YOU KNOW?

Louis Braille was about fifteen when he invented his alphabet. Almost nothing about it has needed changing in two hundred years.

LOOK CLOSER

Hear a talking drum from West Africa actually copying the sound of a voice.

https://en.wikipedia.org/wiki/Talking_drum

FIELD NOTES

Invent a code for your class with three signals. Write what each one means.

Solving problems through communication

Two children, one hoop, and a sentence that ended it.

DO YOU REMEMBER?

What was your last argument about? Who ended it, and how?

BOOTS ON!

Turn one complaint into a want. Somebody took my pencil becomes what?

LET US FIND OUT

Most arguments end faster if somebody says what they want, instead of what is wrong with the other person.

Compare these two.

__You always grab it and you never share and you are selfish.__

I felt left out when the hoop went past me. I would like a turn next.

The second one is harder to say and much harder to argue with. Name the feeling, name the want, ask for the change.

YOUR TURN

- 1 Turn each complaint into a want. *You never let me go first.* Then: *You are being annoying.*

1 _____

2 _____

- 2 Write the three steps in order.

name the want, ask for the change, name the feeling

1 _____

2 _____

3 _____

FROM ANOTHER CHAIR

- *Rufus says:* Just say who started it. Then everybody knows whose fault it was.
- *Nella says:* Knowing whose fault it was does not get the hoop shared. Saying what you want does.
- *Then:* Which one would end your last argument faster? Write your answer.

LOOK CLOSER

Watch what a good friend actually does when there is a disagreement.

<https://www.bbc.co.uk/bitesize/articles/znhf7nb>

FIELD NOTES

Write a sentence you could have used to end your last argument sooner.

Digital communication

It weighed as much as a big bag of sugar, and it changed everything.

DO YOU REMEMBER?

How does a message get from your phone to your friend's?

BOOTS ON!

Hold up something that weighs two kilograms. Now imagine ringing somebody with it.

LET US FIND OUT

On a New York street in 1973, an engineer called Martin Cooper made the first ever mobile phone call. The phone weighed about two kilograms, which is as much as a big bag of sugar.

And your message does not fly straight to your friend. It goes up to a mast, along a wire, sometimes a wire that lies on the bottom of the sea, then up to

another mast near your friend, and only then to their phone. All of that in less than a second.

NUMBER THEM IN THE ORDER A MESSAGE TRAVELS

ALL OF IT IN UNDER A SECOND

 a wire	 my friend's phone	 a mast near me	 my phone	 a mast near my friend
---	---	--	---	---

YOUR TURN

- 1 Number the five places above in the order a message really travels.

my friend's phone, my phone, a mast near me, a wire, a mast near my friend

- 2 What did the first mobile phone weigh?

It weighed about

LOOK CLOSER

Meet the man who made the very first mobile phone call, and see the phone he used.

[https://en.wikipedia.org/wiki/Martin_Cooper_\(inventor\)](https://en.wikipedia.org/wiki/Martin_Cooper_(inventor))

FIELD NOTES

Write one message you would send right now if you could send it anywhere.

Our class expedition: The Field Club silent morning

For one whole morning, nobody in your class says a single word. Not one. You will find out things about communication that no lesson could tell you.

- 1 Agree the signals first** Before the silence starts, invent and write up signals for: yes, no, I do not understand, help, I have finished, and I need the toilet. Everybody must agree.
- 2 Go silent** Twenty minutes at first. Carry on with normal work. When you want to say something, you must find another way, and you must not give up and speak.
- 3 Write it down while you can still feel it** The moment it ends, write three things: what was easy, what was impossible, and one moment when you were completely misunderstood.
- 4 Then talk about who found it hardest** Some people will have found it awful and some will have found it restful. Ask both kinds why. Do not decide which kind is right.

Our plan (field notes). Write your class signals here, before you start.

How did it go?

WHAT I DID	EASY	GETTING THERE	I NEED HELP
I named many ways of sending a message	☐	☐	☐
I said somebody's idea back to them correctly	☐	☐	☐
I showed a feeling with no words at all	☐	☐	☐
I used a better word than cross	☐	☐	☐
I spelled my name with my hands	☐	☐	☐
I turned a complaint into a want	☐	☐	☐

Now I can

- ☐ explain what communication is, and give six ways of doing it
- ☐ tell the difference between listening and waiting to talk
- ☐ give three examples of non-verbal communication
- ☐ say that Portuguese Sign Language is a full language of its own
- ☐ use three feelings words that are better than cross
- ☐ say who Louis Braille was and roughly how old he was
- ☐ trace a message from my phone to my friend's, in the right order

New words

**communication**

getting an idea into somebody else's head

**non-verbal**

without words

**braille**

reading with your fingertips

**Morse code**

messages sent as long and short beeps

**verbal**

with words

**listening**

being able to say it back

**sign language**

a full language made with hands

**frustrated**

you have tried and tried and it will not work

UNIT 5 • THE LONG HAUL • TERM 3

Moving goods and people

The Long Haul

Where the Field Club follows a banana all the way home

Should we move things across the world just because we can?

JOURNEYS

CARGO

SAFETY

AIR

Getting started

Field Club is here!

They have a handcart now, piled with parcels tied up with string, and they are pushing it along a country road. Bram is checking the wheel. Rufus wants to know who packed the parcels and what is inside them. Nella is watching a train cross a viaduct far away and wondering who is on it. Pip has found a label that fell off. Tam is riding on top.

On this expedition you will

- Count every way you have travelled this week, and be surprised
- Follow a banana all the way from a farm to your fruit bowl
- Sort everything that moves into land, water and air
- Learn the crossing drill so well you never have to think about it
- Ride a Lisbon tram, a bullet train, a floating train and a cable car
- Work out which way of travelling is kindest to the air

The big question, note printed beside it

Rufus says of course we should, it means you can eat a banana in January. Nella says somebody grew that banana and she wants to know what they got for it. Bram says the ship burned fuel all the way, and asks who pays for that.

Ways we travel

Every one of these counts. Even the stairs.

DO YOU REMEMBER?

How did you get to school today? And the day before?

BOOTS ON!

Count on your fingers every way you have travelled since Monday. Say the total.

LET US FIND OUT

You have already travelled in at least three different ways this week, and probably more than you think.

Walking counts. So does a bicycle, a car, a bus, a tram, a train, a boat, an aeroplane, a lift and an escalator. Most people forget the last three, and forget walking altogether, which is the strangest thing of all: it is the one everybody does every day.

YOUR TURN

1 Tick every way you have travelled this week.

☐ walking ☐ bicycle ☐ car ☐ bus ☐ tram ☐ train ☐ boat
☐ aeroplane ☐ lift

2 Which way do you use most? Write it.

I mostly travel by

ONE STEP FURTHER

Ask three adults how they got to school when they were seven. Write down all three answers. At least one will surprise you.

FIELD NOTES

Draw your own journey to school. Mark the part you like best with a star.

Moving goods

Same size, every time. That was the whole invention.

A banana in a Portuguese shop has probably travelled further than anybody in your class.

DO YOU REMEMBER?

Where did your breakfast come from? Not the shop. Before that.

BOOTS ON!

Look at the label on something in your bag. Which country does it name?

LET US FIND OUT

In 1956 a lorry driver called Malcom McLean had an idea that sounds boring and changed the world. He put fifty eight big metal boxes on a ship, all the same size.

Because every box was the same, a crane could lift them straight off the ship and onto a lorry without anybody unpacking anything. Loading a ship went from taking weeks to taking hours.

That is why more than eight out of every ten things bought and sold between countries now travel by ship.

A JOURNEY, IN FOUR STEPS

NOW DRAW YOUR OWN OBJECT'S JOURNEY

1

2

3

4

YOUR TURN

- 1 Choose something in your classroom and find out where it came from. Write the country.

My object came from

- 2 Draw its journey in the four empty boxes above, like the strip you have just read.

DID YOU KNOW?

Before Malcom McLean's boxes, loading one ship could take weeks. Afterwards it took hours. He was not an engineer. He drove a lorry.

LOOK CLOSER

See how one plain steel box changed the way the whole world buys and sells.

<https://en.wikipedia.org/wiki/Containerization>

FIELD NOTES

Write the furthest-travelled thing you can find in your own home.

Land, water and air transport

Land, water, air. And a few awkward ones that refuse to choose.

DO YOU REMEMBER?

Name something that travels on water. Now something that travels in the air.

BOOTS ON!

Say one thing that goes by land, one by water and one by air. Then one that goes by two of them.

LET US FIND OUT

Everything that moves goes by land, by water or by air. That is the whole list.

But some things will not sort neatly, and those are the interesting ones. A seaplane belongs to water and air. A hovercraft floats on a cushion of air above water. In Venice the ambulance is a boat. In La Paz people go to work through the air on a wire.

When something will not fit your boxes, do not force it. Make a new box and write why.

LAND

WATER

AIR

YOUR TURN

- 1 Write each one into the right column above. One of them is awkward on purpose.

above

tram

bicycle

lorry

cable car

ferry

gondola

aeroplane

hot air balloon

- 2 Which one was hardest to place? Write it and say why.

The hardest was

FIELD NOTES

Invent something that travels on all three. Draw it.

Safe travel

Stop. Look. Listen. Think. And keep looking while you walk.

DO YOU REMEMBER?

Where is the safest place near your school to cross a road?

BOOTS ON!

Say the four words of the drill.
Now say the fifth thing everybody forgets.

LET US FIND OUT

The drill is stop, look, listen, think. Then you cross, and here is the part almost everybody forgets: you keep looking while you walk. The road does not stop changing just because you have stepped onto it.

In a car, a seatbelt only works if it lies flat across your hips and your shoulder. Never under your arm, and never behind your back. And you use a child seat until you are big enough for the belt to sit properly without one.

YOUR TURN

- 1 Write the drill in order.

think, stop, look, listen

1

2

3

4

- 2 Circle the ones that are safe.

belt across your hips

belt under your arm

crossing at a crossing

running out between parked cars

BIG THINKING

Adults made all these rules for children. Rufus wants to know who checks that the adults follow them too. Watch for one week and find out.

LOOK CLOSER

Your teacher can print free road safety games and posters to use with you.

<https://www.think.gov.uk/education-resources/>

FIELD NOTES

Draw the road nearest your school. Mark the safest crossing place with a star and the most dangerous with an X.

Transport around the world

DO YOU REMEMBER?

What is the most unusual way you have ever travelled?

BOOTS ON!

Which of these three would you most like to ride? Say why in one sentence.

LET US FIND OUT

In Lisbon, little yellow trams built in the 1930s still climb streets far too steep and too narrow for a bus. They were given new brakes and motors in the 1990s but they kept their wooden bodies, because nothing modern is small enough to fit.

In Shanghai there is a train that floats above its track on magnets and has run at four hundred and thirty one kilometres an hour. Japan's bullet train started running back in 1964.

And in La Paz in Bolivia, the city is so steep that people go to work in cable cars hanging above the rooftops. There are ten lines and thirty two stations.

A tram from the 1930s, a train that floats, and a cable car full of people going to work.

YOUR TURN

1 Match each one to its city.

a yellow tram

a floating train

cable cars to work

La Paz

Lisbon

Shanghai

2 Why does Lisbon still use trams from the 1930s?

Lisbon still uses them because

DID YOU KNOW?

In the Netherlands there are more bicycles than there are people: about twenty two million bicycles for seventeen million people.

LOOK CLOSER

See the cable cars that people in La Paz ride to work, high above the city.

https://en.wikipedia.org/wiki/Mi_Telef%C3%A9rico

FIELD NOTES

Write which one you would ride first, and what you would look at out of the window.

Helping the environment

A bike bus. Same children, same school, one car fewer each.

DO YOU REMEMBER?

What comes out of the back of a car?

BOOTS ON!

Look at the bar chart. Which bar is longest? Which is shortest?

LET US FIND OUT

Walking and cycling put almost nothing into the air. A car with only one person in it puts out the most of any way of travelling, for each person carried. A bus or a train shares its fuel between everybody on board, so each person's share is much smaller.

In some towns, children now cycle to school all together in a long supervised line called a bike bus. It has a route and a timetable and stops along the way, exactly like a real bus, except that it is made of bicycles.

KINDEST TO THE AIR

HARDEST ON THE AIR

YOUR TURN

- 1 Put these in order on the ladder above, kindest to the air first.

car with one person, bus, bicycle, walking

- 2 Could your class start a bike bus or a walking bus? Write who you would have to ask.

We would have to ask

LOOK CLOSER

See real children cycling to school together in a bike bus.

https://en.wikipedia.org/wiki/Bicycle_bus

FIELD NOTES

Write one journey your family makes by car that could be walked instead.

Community helpers and transport

Three vehicles. Not one of them is going anywhere for itself.

DO YOU REMEMBER?

Which special vehicles have you heard the siren of this month?

BOOTS ON!

Make the sound of a siren, then say who might be inside that vehicle.

LET US FIND OUT

An ambulance, a fire engine and a refuse lorry are all doing a job for everybody at once. Nobody owns them. Everybody needs them.

And remember what you found out in Expedition 2: here in Portugal, the fire engine is very often crewed by volunteers who have left another job to come.

When you hear a siren, the rule is simple and it is the law: everybody moves out of the way. That is the whole of society agreeing about something for two seconds.

YOUR TURN

- 1 Match each vehicle to its job.

ambulance

fire engine

refuse lorry

school bus

puts out fires

gets everybody to school

takes you to hospital

keeps the street clean

- 2 Why must everybody move out of the way for a siren?

Everybody moves because

ONE STEP FURTHER

Find out where your nearest bombeiros station is. Write down how far it is from your school.

FIELD NOTES

Draw a vehicle that helps everybody. Write one thing it could not do without.

Design future transport

Before somebody built the first cable car, everybody in that city walked up the hill.

DO YOU REMEMBER?

What would you change about the way you get to school?

BOOTS ON!

Look out of the window. What makes getting about difficult right here?

LET US FIND OUT

Every way of travelling was invented to solve one particular problem in one particular place.

La Paz is enormously steep and very high up, so somebody built cable cars. Venice is made of water, so the ambulance is a boat. Lisbon's streets are narrow and steep, so the trams stayed small.

So an inventor of transport starts by looking very hard at one place, not by thinking of a clever machine.

YOUR TURN

- 1 Write the transport problem where you live.

Near me, the problem is

- 2 Design your transport.

LABEL HOW MANY PEOPLE IT CARRIES, AND WHAT MAKES IT GO.

3 Does it go by land, water or air?

land

water

air

more than one

FROM ANOTHER CHAIR

- *Rufus says:* Build the fastest one. Fast is what transport is for.
- *Nella says:* Build the one that carries the most people, and the ones who cannot walk far. Fast is no use if it leaves people behind.
- *Then:* Your machine cannot be both. Choose one, and write down what you gave up.

FIELD NOTES

Write who your transport helps most, and who it does not help at all.

Our class expedition: The whole school journey survey

Your class is going to find out how every single person in your school gets there, put it on one enormous graph, and then do something about what you find.

- 1 **Decide what counts** Agree your categories before you start: walk, cycle, scooter, bus, car, tram, train, more than one way. Write them big. Changing them halfway ruins the data.

- 2 Collect it properly** Send two children to every class with a tally sheet. Everybody makes their own mark. Nobody guesses on anybody else's behalf.
- 3 Build the graph in the hall** One enormous graph, one square per person, coloured in by that person. It should cover a whole wall by the end.
- 4 Find the one thing you can change** Look at the graph and find one journey that many people make by car and could make another way. Write a real letter to whoever could help, and post it.

Our plan (field notes). Write your categories here, before you start collecting.

How did it go?

WHAT I DID	EASY	GETTING THERE	I NEED HELP
I counted the ways I travel	☐	☐	☐
I traced a banana from a farm to a fruit bowl	☐	☐	☐
I sorted transport into land, water and air	☐	☐	☐
I said the crossing drill from memory	☐	☐	☐
I described transport in three other countries	☐	☐	☐
I said which way of travelling is kindest to the air	☐	☐	☐

Now I can

- ☐ name at least six ways of travelling, including walking
- ☐ explain what Malcom McLean did and why it mattered
- ☐ trace a banana's journey in five steps
- ☐ sort transport into land, water and air, and spot the awkward ones
- ☐ say the crossing drill, including the part everybody forgets
- ☐ describe the Lisbon tram, the Shanghai maglev and the La Paz cable cars
- ☐ say which ways of travelling put least into the air

New words

**transport**

any way of moving people or things

**journey**

the whole way from start to finish

**tram**

a bus on rails, in the street

**seatbelt**

the strap that holds you in a seat

**container**

a big steel box, all the same size

**cargo**

the goods a ship or lorry carries

**pollution**

what dirties the air

**bike bus**

children cycling to school all together

UNIT 6 • THE HOME FIRE • TERM 3

Family, friends, community and culture

The Home Fire

Where the Field Club comes home and finds out that home means many things

What makes a group of people into a community?

FAMILY

FRIENDS

NEIGHBOURS

FESTIVALS

Getting started

Field Club is here!

The expedition is over and they are home. There is a fire, and a lantern hanging from a branch, and a long table with bowls on it and paper bunting strung above. Bram has put the map away at last. Rufus is asking who made the food. Nella is listening to somebody's story. Pip has laid out everything he collected all year in a neat row. Tam is asleep, finally.

On this expedition you will

- Draw your own family, whatever shape it is
- See that families all over the world look different and are all real families
- Work out what actually makes somebody a good friend
- Find out who keeps your own neighbourhood working
- Learn about four celebrations from four countries
- Practise asking why instead of why not

The big question, note printed beside it

Rufus says a community is just people who live near each other. Nella says she knows neighbours who have never spoken and a friend three countries away who would come tomorrow. Pip thinks it is about who turns up when something goes wrong.

My family

Add your own branches.

Every family tree looks different. That is not a problem to be explained. It is just true.

DO YOU REMEMBER?

Who lives in your home? Count them, including you.

BOOTS ON!

Say the name of one person in your family who does not live with you.

LET US FIND OUT

A family is the people who look after you and belong to you. Some are big, some are small. Some live in one house and some live in three countries.

You have a right to your own name, and to know which family you belong to. It is written down in the same agreement that gave you the right to play.

So when you draw your family tree, draw yours. Not the one in the picture. Add branches, take them away, put somebody in twice if that is how it works.

DRAW YOUR OWN FAMILY IN HERE

PUT YOURSELF AT THE BOTTOM

YOUR TURN

- 1 Draw your own family tree in the dashed box above. Put yourself at the bottom.
- 2 Write who taught you something important.

I was taught something important by

LOOK CLOSER

Find the rule that says every child has a right to a name and a family.

<https://www.unicef.org/child-rights-convention/convention-text-child-rens-version>

FIELD NOTES

Write one thing your family does that no other family does in quite the same way.

Different families around the world

Six families. Six shapes. Six real families.

DO YOU REMEMBER?

Is your family the same shape as your best friend's family?

BOOTS ON!

Look at the picture. Point at the family that is most like yours. Now point at the one that is least like yours.

LET US FIND OUT

Families come in every shape there is, and every one of them is a real family.

Some children live with a grandmother. Some live with one adult. Some have two mothers or two fathers. Some are adopted, or fostered, and some

live with an aunt while their mother or father works in another country. Some have eleven cousins in the same street and some have none anywhere.

There is a rule about this too. Wherever it is possible, a child has the right to live with their family.

YOUR TURN

- 1 Tick every one that is a real family. If you ticked all six, you have understood this page.

- | | |
|---|---|
| ☐ a child and a grandmother | ☐ one adult and two children |
| ☐ two mothers and a baby | ☐ an adopted brother |
| ☐ a huge family in one house | ☐ a family in two countries |

- 2 What do all families have in common? Write one thing.

Every family has

FROM ANOTHER CHAIR

- *Rufus says:* A family is a mother, a father and children. That is what the word means.
- *Nella says:* My friend lives with her grandmother and they are a family. Words have to fit the people, not the other way round.

- *Then:* Nella is right about the people. Rufus is right that words matter. So write your own definition of family, one that fits everybody in your class.

Being a good friend

Nobody is watching these two. That is when it counts.

DO YOU REMEMBER?

What did a friend do for you this week?

BOOTS ON!

Say one thing a good friend does.
Go round the class without repeating.

LET US FIND OUT

A good friend is somebody who is still kind to you when nobody else is watching. That is the whole test, and it is a hard one.

Real friends share, take turns, tell you the truth kindly, say sorry and mean it, and sometimes let you choose the game even when they do not want to play it.

And here is the part people find hardest: a good friend can disagree with you and still be your friend. Rufus and Nella disagree in every single expedition in this book, and they have never once stopped being friends.

YOUR TURN

1 Circle what a good friend does.

shares

only plays their game

says sorry

tells your secrets

can disagree with you

2 Write one thing you will do to be a better friend this week.

This week I will

DID YOU KNOW?

Rufus and Nella disagree in every single expedition in this book, and they are still in the same club.

LOOK CLOSER

Watch what makes somebody a good friend, and see if you agree with all of it.

<https://www.bbc.co.uk/bitesize/articles/znhf7nb>

FIELD NOTES

Write the name of somebody who was kind to you when nobody was watching.

Our school and local community

A junta de freguesia looks after the smallest patch of all: yours.

DO YOU REMEMBER?

Who cuts the grass in the park near you? Do you actually know?

BOOTS ON!

Name three people who keep your neighbourhood working. You may not know their names, so describe their jobs.

LET US FIND OUT

Here in Portugal, the smallest local council is called a junta de freguesia. It looks after your own neighbourhood: the paths, the little gardens, the community hall, and helping families who need it.

And Portugal has something remarkable. There are about four hundred and eighty fire stations in the country, and nearly all of them are run by volunteers who leave other jobs and come when the siren goes.

YOUR TURN

- 1 Write three people who look after where you live.

1

2

3

- 2 Find out the name of your own freguesia. Write it here.

My freguesia is called

LOOK CLOSER

Find out about volunteer fire brigades, like Portugal's bombeiros voluntarios.

https://en.wikipedia.org/wiki/Volunteer_fire_department

FIELD NOTES

Write one thing you would ask your junta de freguesia to do.

Working together to build a caring community

Nobody owns this garden. Everybody who digs in it does.

DO YOU REMEMBER?

What is the last thing your class did together for somebody else?

BOOTS ON!

Name something at your school that everybody uses. Now name who tidies it.

LET US FIND OUT

A community garden belongs to everybody who digs in it. So does a shared bookshelf, a village hall, a football pitch, a beach.

And here is the difficulty with shared things, which is worth knowing at seven: if everybody uses them and nobody looks after them, they stop

working. So shared things need shared rules, and somebody has to be willing to do the unglamorous part.

That is what the bombeiros do. That is what the food bank volunteers do. That is what whoever puts the chairs away at your school does.

YOUR TURN

1 Write three rules for a shared garden.

1

2

3

2 What is one job at your school that everybody benefits from and nobody notices?

Nobody notices that somebody

ONE STEP FURTHER

Choose one shared place in your school. Look after it for a whole week without telling anybody you are doing it. Then write down whether anybody noticed.

BIG THINKING

If a shared thing needs looking after and nobody is paid to do it, who should? The person who uses it most? Everybody in turn? Or whoever notices first?

FIELD NOTES

Write one shared thing near you that needs looking after.

Celebrations and traditions

DO YOU REMEMBER?

What is the best celebration in your family's year?

BOOTS ON!

Look at the four celebrations. What do all four of them have in common?

LET US FIND OUT

In Mexico, at Dia de Muertos, families build a table covered in marigolds, candles, photographs and the favourite food of people they loved. It is a happy festival, not a sad one.

Here in Portugal, at the Festa dos Tabuleiros in Tomar, women carry towers of bread and paper flowers on their heads, built as tall as the woman carrying them and weighing about fifteen kilograms.

At Nowruz, in Iran and many other countries, the new year begins on the first day of spring instead of in the middle of winter. And at Diwali families light rows of little clay lamps and fill the whole house with light.

Four celebrations, four countries, and the same idea underneath all of them.

DIA DE MUERTOS

candles on a table

**FESTA DOS
TABULEIROS**

trays of bread and
flowers

NOWRUZ

a fire jumped over
at new year

DIWALI

small clay lamps
in a row

YOUR TURN

- 1 Match each celebration to the country it comes from.

Dia de Muertos

Festa dos Tabuleiros

Nowruz

Diwali

Portugal

Iran

India

Mexico

- 2 What do all four have in common? Write one thing.

All four of them

DID YOU KNOW?

A tabuleiro in Tomar is built as tall as the woman who carries it, holds about thirty loaves of bread, and weighs about fifteen kilograms.

LOOK CLOSER

Watch the Festa dos Tabuleiros in Tomar, right here in Portugal.

<https://ich.unesco.org/en/RL/festa-dos-tabuleiros-festival-of-the-trays-01573>

FIELD NOTES

Draw one thing from your family's own celebration. Write what it is for.

Respecting different cultures

Two children, two lunches, one perfectly good question.

DO YOU REMEMBER?

Have you ever eaten something at a friend's house that you had never seen before?

BOOTS ON!

Say why do you do it that way, then say why don't you do it my way. Notice how different your voice sounds.

LET US FIND OUT

Here is the most useful thing in this whole book, and it is only one word different from the unhelpful version.

When somebody does something differently from you, the first question is why, not why not.

Why not means you have already decided they are wrong. _Why_ means you want to know. They sound almost the same and they are completely different.

You have a right to your own culture, your own language and your own religion, and so has everybody else.

YOUR TURN

- 1 Turn each why not into a why. *Why do you not eat this?* Then: *Why do you not celebrate Christmas?*

1

2

- 2 Ask somebody in your class a real why question about their family. Write what you learned.

I found out that

FROM ANOTHER CHAIR

- *Rufus says:* Everybody should just do things the normal way. It is simpler.
- *Nella says:* Whose normal? Mine is not the same as yours, and we live in the same street.
- *Then:* This is the last argument in the book, and it is the one the whole subject is about. Write down what you think, and then go and ask somebody who might disagree.

LOOK CLOSER

Read the whole list of things every child in the world has a right to, including their own culture.

<https://www.unicef.org/child-rights-convention/convention-text-childrens-version>

FIELD NOTES

Write one thing you learned this year from somebody who is not like you.

Our class expedition: The Field Club table

The last expedition ends the way the picture at the front of this book does: with one long table, and everybody around it.

- 1 Everybody brings one thing** One object, one food, one photograph or one piece of music from a celebration your own family keeps. One. Not a display, just one real thing.
- 2 Label it yourself** Every child writes their own label. Nobody explains anybody else's object. This rule is the whole project and it is not negotiable.
- 3 Ask one why question each** Go round the table. Everybody must ask one person a real why question about their object, and listen to the whole answer before speaking.

4

Write the field note At the end, everybody writes one sentence about somebody else's object. Then read them all out. Some of them will surprise the owner.

Our plan (field notes). Write what you will bring, and one sentence about why it matters to your family.

UNIT 6 • THE HOME FIRE

HOW DID IT GO?

How did it go?

WHAT I DID	EASY	GETTING THERE	I NEED HELP
I drew my own family tree	☐	☐	☐
I said why all families are real families	☐	☐	☐
I explained what makes a good friend	☐	☐	☐
I found out who looks after my neighbourhood	☐	☐	☐
I described a celebration from another country	☐	☐	☐
I asked why instead of why not	☐	☐	☐

UNIT 6 • THE HOME FIRE

NOW I CAN

Now I can

- ☐ draw my own family tree, whatever shape it is
- ☐ explain that families come in many shapes and all of them are real
- ☐ say what makes somebody a good friend, including disagreeing kindly

- ☐ say what a junta de freguesia does
- ☐ explain what is remarkable about Portugal's bombeiros
- ☐ describe Dia de Muertos, the Festa dos Tabuleiros, Nowruz and Diwali
- ☐ ask why instead of why not, and hear the difference

New words

family

the people who belong to you

friend

somebody kind when nobody is watching

community

the people who share a place

freguesia

the smallest local area in Portugal

tradition

something a family or country keeps doing

celebration

a day people make special on purpose

culture

the way a group of people do things

respect

asking why instead of why not

Term 1: the autumn revision expedition

You have been on two expeditions. The Playing Fields, and The Long Road Home. Before you pack for the next one, go back over your own notebook. Not the teaching pages: your pages, the ones with your handwriting on them.

WALK BACK THROUGH EXPEDITION 1

- ☐ I can count up a survey and say what it shows

- ☐ I can sort games into indoors, outdoors and both, and spot the ones that are both
- ☐ I can name a traditional game from Ghana, from India and from Portugal
- ☐ I can say how many minutes a day a child should move about
- ☐ I can check that a helmet fits properly
- ☐ I can explain how goalball is played, and why the crowd is silent
- ☐ I can say why playing is a right and not just a treat

WALK BACK THROUGH EXPEDITION 2

- ☐ I can name the things nobody can live without
- ☐ I can tell a need from a want, and say why the middle is hard
- ☐ I can describe a home from another country and say why it is built that way
- ☐ I can match a job to the need it meets
- ☐ I can say what a volunteer is
- ☐ I can work out how many weeks of saving something costs

The question that came back twice. Both expeditions asked you the same thing in two different coats: who decides what is enough? Rufus counted marks on a tally chart. Nella asked who was left over at the end. Write which of them you agreed with in September, and whether you still do.

FIELD NOTES

Term 1: show what you know

Five things. Take your time. Nobody is timing you, and there is no prize for finishing first.

- 1 **Sort.** Write each one into the right column.

a games console

clean water

somewhere safe to sleep

food

a scooter

NEED

WANT

- 2 **Name.** Write the country each game comes from.

oware

Portugal

kabaddi

Ghana

jogo da malha

India

- 3 **Explain.** Why does a goalball crowd stay silent while the ball is moving?

The crowd stays silent because

- 4 **Draw.** Draw a home from a country that is not yours. Label one thing about it that suits the weather there.

LABEL THE PART THAT SUITS THE WEATHER.

- 5 **Argue.** Rufus says the best game is the one that most people chose. Nella says the game one person chose is still somebody's favourite. Who do you agree with, and why?

I agree with

Term 1: out of the classroom

Four things to do with your class this term. None of them needs a screen.

- 1 **The playground survey.** Count what is really played at break for one whole week, on a tally chart on the wall. Then ask the two people whose game got the fewest marks what they like about it.
- 2 **A game from somewhere else.** Learn one whole game from another country, properly, with its real rules, and teach it to a younger class.
- 3 **The walk to the freguesia.** Walk to the nearest place your community looks after: a garden, a pitch, a library, a bench. Find out who cuts the grass or unlocks the door.

- 4 The food bank box.** Fill one box for the Banco Alimentar with your class. Before you fill it, argue about what belongs in it, and write down what you decided and why.

Term 2: the spring revision expedition

Two more expeditions behind you. The Glowing Window, and The Talking Wood. Both of them were about the same thing, though they did not look like it: getting a message from inside one head into another one.

WALK BACK THROUGH EXPEDITION 3

- ☐ I can say what the digital world is, in my own words
- ☐ I can find a computer hidden inside something that is not a computer
- ☐ I can name an invention that solved a real problem somewhere else in the world
- ☐ I can say the three rules for staying safe online
- ☐ I can say what to do if a screen makes me feel funny inside
- ☐ I can say one thing a screen does better and one thing paper does better

WALK BACK THROUGH EXPEDITION 4

- ☐ I can name three ways of sending a message without speaking
- ☐ I can play say it back, and get it right
- ☐ I can name a feeling from a face, with no words at all
- ☐ I can read a braille cell
- ☐ I can turn a complaint into a want
- ☐ I can say where a message goes between my phone and my friend's

The question that came back twice. Expedition 3 asked whether a screen should ever decide for you. Expedition 4 asked whether you can understand somebody whose language you do not speak. Pip noticed that both questions are really about the same worry. Write what you think that worry is.

FIELD NOTES

Term 2: show what you know

1 **Sort.** Write each one under the right heading.

a traffic light

a wooden spoon

a paper book

a washing machine

HAS A COMPUTER INSIDE

HAS NO COMPUTER INSIDE

2 **Name.** Write the three rules for staying safe online, in your own words.

1

2

3

- 3 **Explain.** Why is it easier to be unkind on a screen than to somebody's face?

It is easier because

- 4 **Draw.** Draw a face showing a feeling. Give it to a partner and see whether they can name it. Write what they said.

DRAW THE FACE. WRITE UNDERNEATH WHAT YOUR PARTNER NAMED IT.

- 5 **Argue.** Rufus says a message that arrives in a second is better than one that takes a week. Nella says a letter that took a week is worth keeping. Who do you agree with, and why?

I agree with

Term 2: out of the classroom

- 1 **The hidden computer hunt.** Walk round your school with a clipboard and find every computer that is not in a computer. Traffic lights, the heating, the bell, the kitchen.
- 2 **The silent morning.** The whole class agrees a set of signals and then does not speak for twenty minutes. Write down the moment you were

most misunderstood.

3 A letter that takes a week. Write a real letter, on paper, to a real person, and post it. Then wait. Notice what waiting feels like.

4 Learn to fingerspell your name. Everybody in the class learns their own name in the manual alphabet, and then learns one other person's.

Term 3: the summer revision expedition

The last two. The Long Haul, and The Home Fire. One of them went as far away from home as this notebook goes. The other one came all the way back.

WALK BACK THROUGH EXPEDITION 5

- ☐ I can name ways of travelling by land, by water and by air
- ☐ I can follow something from where it was made to where I bought it
- ☐ I can say the road drill in the right order
- ☐ I can name a city and the way people move about in it
- ☐ I can put ways of travelling in order from kindest to hardest on the air
- ☐ I can say why everybody moves out of the way for a siren

WALK BACK THROUGH EXPEDITION 6

- ☐ I can say that families come in many shapes and all of them are families
- ☐ I can say what a good friend actually does
- ☐ I can name three people who look after where I live
- ☐ I can name my own freguesia
- ☐ I can name a celebration from another country and say what it is for

☐

I can turn a why not into a why

The question that came back twice. Expedition 5 asked whether we should move things across the world just because we can. Expedition 6 asked what makes a group of people into a community. Bram says the second question answers the first one. Write whether you think Bram is right.

FIELD NOTES

Term 3: show what you know

1 Sort. Write each one into the right column.

bicycle

ferry

hot air balloon

tram

LAND

WATER

AIR

2 Name. Write the drill you say before you cross a road, in order.

look, listen, think, stop

1

2

3

4

- 3 **Explain.** Why does Lisbon still run trams that were built in the 1930s?

Lisbon still runs them because

- 4 **Draw.** Draw one celebration from this expedition. Label the country and one thing people do.

LABEL THE COUNTRY, AND ONE THING PEOPLE DO.

- 5 **Argue.** Rufus says a community is the people who live nearest to you. Nella says it is the people who would help you. Who do you agree with, and why?

I agree with

Term 3: out of the classroom

- 1 **The whole school journey survey.** One enormous graph in the hall, one square per person, coloured in by that person.
- 2 **Follow one object home.** Pick one thing in the classroom and find out, for real, where it was made and how it got here. Draw the whole journey.
- 3 **The Field Club table.** Everybody brings one real thing from a celebration their own family keeps, and writes their own label for it.
-

- 4 **Write to somebody who looks after your street.** One real letter to the junta de freguesia about one thing your class would change. Post it, and read the reply out loud when it comes.

My word store

Every word this notebook taught you, in the order you met them. Tick a word when you have used it in a sentence of your own.

EXPEDITION 1 • THE PLAYING FIELDS

**survey**

asking lots of people and counting the answers

**helmet**

a hard hat that protects your head

**traditional**

done the same way for a very long time

**recreation**

the time in a day that is yours

**team**

people who need each other to do it

**exercise**

moving your body to keep it strong

**forecast**

what somebody thinks the weather will do next

**habit**

something you do without deciding to

EXPEDITION 2 • THE LONG ROAD HOME

**need**

something you cannot live without

**ger**

a round Mongolian home made of felt

**food bank**

where given food is passed on to families

**want**

something lovely to have

**volunteer**

somebody who helps and is not paid

**saving**

keeping money now to buy more later

**euro**

the money used in Portugal

**community**

the people who share a place

EXPEDITION 3 • THE GLOWING WINDOW**digital**

anything that works through screens and signals

**device**

a machine with a computer inside it

**password**

a secret word that keeps things yours

**online**

joined up to other computers far away

**invention**

something that did not exist until somebody made it

**problem**

the annoying thing an invention fixes

**screen time**

the time you spend looking at a screen

**kind**

treating somebody as a real person

EXPEDITION 4 • THE TALKING WOOD**communication**

getting an idea into somebody else's head

**verbal**

with words

**non-verbal**

without words

**listening**

being able to say it back

**braille**

reading with your fingertips

**sign language**

a full language made with hands

**Morse code**

messages sent as long and short beeps

**frustrated**

you have tried and tried and it will not work

EXPEDITION 5 • THE LONG HAUL

transport

any way of moving people or things

journey

the whole way from start to finish

tram

a bus on rails, in the street

seatbelt

the strap that holds you in a seat

container

a big steel box, all the same size

cargo

the goods a ship or lorry carries

pollution

what dirties the air

bike bus

children cycling to school all together

EXPEDITION 6 • THE HOME FIRE

family

the people who belong to you

community

the people who share a place

tradition

something a family or country keeps doing

culture

the way a group of people do things

friend

somebody kind when nobody is watching

freguesia

the smallest local area in Portugal

celebration

a day people make special on purpose

respect

asking why instead of why not

Answers

Only the questions that have an answer are here. Everything else in this notebook is your own looking, and nobody can mark that wrong.

EXPEDITION 1 • SPORTS AND RECREATION

1.1.1 *answers will vary; ask the pupil to say one sentence more*

1.1.2 *answers will vary; ask the pupil to say one sentence more*

1.1.3 *every honest answer counts; this one is about the pupil's own week*

1.2.1 Indoors • chess, cards; Both • skipping, hide and seek; Outdoors • football, tag; surface • above

1.2.2 *answers will vary; ask the pupil to say one sentence more*

1.3.1 oware • Ghana; kabaddi • India; jogo da malha • Portugal; petanque • France

1.3.2 *answers will vary; ask the pupil to say one sentence more*

1.4.1 *answers will vary; ask the pupil to say one sentence more*

1.4.2 *answers will vary; ask the pupil to say one sentence more*

1.5.1 a helmet that fits, warming up first, drinking water

1.5.2 *answers will vary; ask the pupil to say one sentence more*

1.6.1 listening, taking turns, trusting

1.6.2 *answers will vary; ask the pupil to say one sentence more*

1.7.1 *look for the label, not the drawing*

1.7.2 *answers will vary; ask the pupil to say one sentence more*

1.8.1 *answers will vary; ask the pupil to say one sentence more*

1.8.2 *look for the label, not the drawing*

1.9.1 *answers will vary; ask the pupil to say one sentence more*

1.9.2 *answers will vary; ask the pupil to say one sentence more*

1.10.1 hot and sunny · paddling and shade; pouring rain · board games indoors; very windy · flying a kite; cold and icy · running to keep warm

1.10.2 *answers will vary; ask the pupil to say one sentence more*

1.11.1 *every honest answer counts; this one is about the pupil's own week*

1.11.2 *answers will vary; ask the pupil to say one sentence more*

EXPEDITION 2 · RICH AND POOR

2.1.1 clean water, food, somewhere safe to sleep, somebody who cares

2.1.2 *look for the label, not the drawing*

2.2.1 Need · a bed, clean water, a warm coat, food, clean air; Want · sweets, a bicycle, a games console; surface · above

2.2.2 *answers will vary; ask the pupil to say one sentence more*

2.3.1 a ger · Mongolia; a trullo · Italy; a houseboat · the Netherlands; a palheiro · Portugal

2.3.2 *answers will vary; ask the pupil to say one sentence more*

2.4.1 farmer · food; nurse · being well; builder · shelter; teacher · knowing things

2.4.2 *answers will vary; ask the pupil to say one sentence more*

2.5.1 bombeiros, a food bank helper, somebody minding a neighbour

2.5.2 *answers will vary; ask the pupil to say one sentence more*

2.6.1 *answers will vary; ask the pupil to say one sentence more*

2.6.2 *answers will vary; ask the pupil to say one sentence more*

EXPEDITION 3 • DIGITAL WORLD

3.1.1 *answers will vary; ask the pupil to say one sentence more*

3.1.2 *look for the label, not the drawing*

3.2.1 a washing machine, a traffic light, a microwave

3.2.2 *answers will vary; ask the pupil to say one sentence more*

3.3.1 M-Pesa • sending money with no bank; a solar lamp • reading after dark; the World Wide Web • sharing what scientists knew

3.3.2 *answers will vary; ask the pupil to say one sentence more*

3.4.1 Screen is better for • hearing a sound, seeing something move, zooming right in; Paper is better for • writing your answer, spreading it all out, taking it outside; surface • above

3.4.2 *answers will vary; ask the pupil to say one sentence more*

3.5.1 *answers will vary; ask the pupil to say one sentence more*

3.5.2 do not answer, and tell an adult

3.6.1 well done on your picture, do you want to play

3.6.2 *answers will vary; ask the pupil to say one sentence more*

3.7.1 *answers will vary; ask the pupil to say one sentence more*

3.7.2 *answers will vary; ask the pupil to say one sentence more*

3.8.1 *answers will vary; ask the pupil to say one sentence more*

3.8.2 *look for the label, not the drawing*

3.8.3 *answers will vary; ask the pupil to say one sentence more*

EXPEDITION 4 • IMPROVING COMMUNICATION

4.1.1 *answers will vary; ask the pupil to say one sentence more*

4.1.2 *answers will vary; ask the pupil to say one sentence more*

4.2.1 *answers will vary; ask the pupil to say one sentence more*

4.2.2 *every honest answer counts; this one is about the pupil's own week*

4.3.1 *answers will vary; ask the pupil to say one sentence more*

4.3.2 *answers will vary; ask the pupil to say one sentence more*

4.4.1 *disappointed · the trip was cancelled; left out · everybody was picked but me; frustrated · I have tried it nine times; nervous · it is my turn next*

4.4.2 *answers will vary; ask the pupil to say one sentence more*

4.5.1 *answers will vary; ask the pupil to say one sentence more*

4.5.2 *answers will vary; ask the pupil to say one sentence more*

4.6.1 *answers will vary; ask the pupil to say one sentence more*

4.6.2 *1 name the feeling, 2 name the want, 3 ask for the change*

4.7.1 *1 my phone, 2 a mast near me, 3 a wire, 4 a mast near my friend, 5 my friend's phone*

4.7.2 *answers will vary; ask the pupil to say one sentence more*

EXPEDITION 5 • MOVING GOODS AND PEOPLE

5.1.1 *every honest answer counts; this one is about the pupil's own week*

5.1.2 *answers will vary; ask the pupil to say one sentence more*

5.2.1 *answers will vary; ask the pupil to say one sentence more*

5.2.2 *answers will vary; ask the pupil to say one sentence more*

5.3.1 Land · tram, bicycle, lorry, cable car; Water · ferry, gondola; Air · aeroplane, hot air balloon; surface · above

5.3.2 *answers will vary; ask the pupil to say one sentence more*

5.4.1 1 stop, 2 look, 3 listen, 4 think

5.4.2 belt across your hips, crossing at a crossing

5.5.1 a yellow tram · Lisbon; a floating train · Shanghai; cable cars to work · La Paz

5.5.2 *answers will vary; ask the pupil to say one sentence more*

5.6.1 1 walking, 2 bicycle, 3 bus, 4 car with one person

5.6.2 *answers will vary; ask the pupil to say one sentence more*

5.7.1 ambulance · takes you to hospital; fire engine · puts out fires; refuse lorry · keeps the street clean; school bus · gets everybody to school

5.7.2 *answers will vary; ask the pupil to say one sentence more*

5.8.1 *answers will vary; ask the pupil to say one sentence more*

5.8.2 *look for the label, not the drawing*

5.8.3 *every honest answer counts; this one is about the pupil's own week*

EXPEDITION 6 · FAMILY, FRIENDS, COMMUNITY AND CULTURE

6.1.1 *answers will vary; ask the pupil to say one sentence more*

6.1.2 *answers will vary; ask the pupil to say one sentence more*

6.2.1 a child and a grandmother, one adult and two children, two mothers and a baby, an adopted brother, a huge family in one house, a family in two countries

6.2.2 *answers will vary; ask the pupil to say one sentence more*

6.3.1 shares, says sorry, can disagree with you

6.3.2 *answers will vary; ask the pupil to say one sentence more*

6.4.1 *answers will vary; ask the pupil to say one sentence more*

6.4.2 *answers will vary; ask the pupil to say one sentence more*

6.5.1 *answers will vary; ask the pupil to say one sentence more*

6.5.2 *answers will vary; ask the pupil to say one sentence more*

6.6.1 Dia de Muertos · Mexico; Festa dos Tabuleiros · Portugal; Nowruz · Iran; Diwali · India

6.6.2 *answers will vary; ask the pupil to say one sentence more*

6.7.1 *answers will vary; ask the pupil to say one sentence more*

6.7.2 *answers will vary; ask the pupil to say one sentence more*

TERM 1 · SHOW WHAT YOU KNOW

Term 1.1 Need · clean water, somewhere safe to sleep, food; Want · a scooter, a games console

Term 1.2 oware · Ghana; kabaddi · India; jogo da malha · Portugal

Term 1.3 *answers will vary; ask the pupil to say one sentence more*

Term 1.4 *look for the label, not the drawing*

Term 1.5 *answers will vary; ask the pupil to say one sentence more*

TERM 2 · SHOW WHAT YOU KNOW

Term 2.1 Has a computer inside · a washing machine, a traffic light; Has no computer inside · a wooden spoon, a paper book

Term 2.2 *answers will vary; ask the pupil to say one sentence more*

Term 2.3 *answers will vary; ask the pupil to say one sentence more*

Term 2.4 *look for the label, not the drawing*

Term 2.5 *answers will vary; ask the pupil to say one sentence more*

TERM 3 • SHOW WHAT YOU KNOW

Term 3.1 Land · tram, bicycle; Water · ferry; Air · hot air balloon

Term 3.2 1 stop, 2 look, 3 listen, 4 think

Term 3.3 *answers will vary; ask the pupil to say one sentence more*

Term 3.4 *look for the label, not the drawing*

Term 3.5 *answers will vary; ask the pupil to say one sentence more*

Things we did not print

Everything in this book was checked before it was printed. Three things were checked and then left out, and it is worth knowing why.

A photograph of a real child in a real ger. We could not find one whose family had clearly agreed to it being printed in a school book, so Expedition 2 carries a painting and a drawn outline instead. Rule five: nobody is a stranger's story.

A number for how many people in the world have no clean water. The figure changes every year and the two sources we trusted did not agree with each other, so topic 2.1 teaches what a need is and sends you to a live page for the number instead of freezing a wrong one in print.

A code to a video of a talking drum being played by a named musician. The video was excellent and the page around it carried advertisements aimed at adults, which breaks the promise on page 2 that every square is free and asks for nothing. Topic 4.5 points at the encyclopaedia article instead.

For teachers

This is a Student Book. It is written to the pupil and it is meant to be written in. This page is the only one addressed to you.

What the book assumes. Six and seven year olds who can read simple sentences with help, and who cannot yet write at length. Every extended answer in the book is one or two ruled lines, and every task can be answered by drawing, circling or ticking if writing is the barrier.

How an expedition runs. Six expeditions, two a term. Each opens with a painting and a big question that has no answer in the book, then runs eleven, six, eight, seven, eight and seven topics. Each topic is one teaching page: look at the plate, read *Let us find out* together, do *Your turn*, argue about *From another chair*, write the field note. Each expedition closes with a class project, a self-check table, a *Now I can* checklist and its own word list.

The big question is not rhetorical. It is the assessed skill in Global Perspectives at this stage: hold two accounts of the same thing at once without collapsing them into one. *From another chair* is where that is practised. Rufus and Nella are never corrected, and neither should the class be pushed to a verdict.

The three terms. Expeditions 1 and 2 in the autumn, 3 and 4 in the spring, 5 and 6 in the summer, each term closing with a revision expedition, five assessment items and four activities out of the classroom. The assessment items are not a test paper: they are the same five verbs the book teaches, which are sort, name, explain, draw and argue.

The little squares. Every code was opened and read on 3 August 2026. Every destination is free, asks for no name and shows no advertising aimed at children. Open each one yourself before the lesson: the web changes and this book does not. Every address is printed in full in *Every QR code in this book*, so a class with no device loses nothing.

Marking. The field notes cannot be marked wrong. They are evidence of looking, not of knowing. The *Answers* section covers only the items that have an answer; everything else is marked by asking the child to say more.

Differentiation. A pupil who cannot yet write can dictate a field note or draw it. A pupil who wants more should be sent to *One step further*, which appears wherever a topic has somewhere further to go.

PRIME SCHOOL PRESS

Global Perspectives

Year 2 · Prime School Press · Student Manual

The Field Notebook. Look outwards.

Ask, listen, compare and act. A field notebook for finding out how the world works, one careful question at a time.

INSIDE THIS BOOK

- The four thinking steps in every unit
- Field notes to write in every week
- Real places, real people, real questions
- A project in every unit
- Original watercolour illustration throughout

Prime School Press · Global Perspectives

Ages 6–7 · Lower Primary
